SHA-1 implementation in NDK

Copyright (C) 1995-1998 Eric Young (eay@cryptsoft.com)
All rights reserved.

This package is an SSL implementation written
by Eric Young (eay@cryptsoft.com).
The implementation was written so as to conform with Netscapes SSL.

This library is free for commercial and non-commercial use as long as

the following conditions are aheared to. The following conditions apply to all code found in this distribution, be it the RC4, RSA, lhash, DES, etc., code; not just the SSL code. The SSL documentation included with this distribution is covered by the same copyright terms except that the holder is Tim Hudson (tjh@cryptsoft.com).

Copyright remains Eric Young's, and as such any Copyright notices in the code are not to be removed.

If this package is used in a product, Eric Young should be given attribution

as the author of the parts of the library used.

This can be in the form of a textual message at program startup or in documentation (online or textual) provided with the package.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.
2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

3. All advertising materials mentioning features or use of this software

must display the following acknowledgement:

"This product includes cryptographic software written by
Eric Young (eay@cryptsoft.com)"

The word 'cryptographic' can be left out if the rouines from the library

being used are not cryptographic related :-).

4. If you include any Windows specific code (or a derivative thereof) from

the apps directory (application code) you must include an acknowledgement:

"This product includes software written by Tim Hudson
(tjh@cryptsoft.com)"

THIS SOFTWARE IS PROVIDED BY ERIC YOUNG ``AS IS'' AND

PCRE LICENCE

PCRE is a library of functions to support regular expressions whose syntax and semantics are as close as possible to those of the Perl 5 language.

Release 8 of PCRE is distributed under the terms of the "BSD" licence, as specified below. The documentation for PCRE, supplied in the "doc" directory, is distributed under the same terms as the software itself. The data in the testdata directory is not copyrighted and is in the public domain.

The basic library functions are written in C and are freestanding. Also included in the distribution is a set of C++ wrapper functions, and a just-in-time compiler that can be used to optimize pattern matching. These are both optional features that can be omitted when the library is built.

THE BASIC LIBRARY FUNCTIONS

zlib

(C) 1995-2013 Jean-loup Gailly and Mark Adler

This software is provided 'as-is', without any express or implied warranty. In no event will the authors be held liable for any damages

arising from the use of this software.

Permission is granted to anyone to use this software for any purpose,

including commercial applications, and to alter it and redistribute it

freely, subject to the following restrictions:

1. The origin of this software must not be misrepresented; you must not

claim that you wrote the original software. If you use this software

in a product, an acknowledgment in the product documentation would be

appreciated but is not required.

2. Altered source versions must be plainly marked as such, and must not be

misrepresented as being the original software.

3. This notice may not be removed or altered from any source distribution.

Jean-loup Gailly
jloup@gzip.org

Mark Adler
madler@alumni.caltech.edu

If you use the zlib library in a product, we would appreciate *not*

receiving
lengthy legal documents to sign. The sources are provided for free
but without
warranty of any kind. The library has been entirely written by Jean-
loup
Gailly and Mark Adler; it does not include third-party code.

If you redistribute modified sources, we would appreciate that you
include in
the file ChangeLog history information documenting your changes.
Please read
the FAQ for more information on the distribution of modified source
versions.

libnettle
<https://git.lysator.liu.se/nettle/nettle>
<https://git.lysator.liu.se/nettle/nettle/raw/master/COPYING.LESSERv3>

GNU LESSER GENERAL PUBLIC LICENSE
Version 3, 29 June 2007

Copyright (C) 2007 Free Software Foundation, Inc. <<http://fsf.org/>>
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

This version of the GNU Lesser General Public License incorporates
the terms and conditions of version 3 of the GNU General Public
License, supplemented by the additional permissions listed below.

0. Additional Definitions.

As used herein, "this License" refers to version 3 of the GNU Lesser
General Public License, and the "GNU GPL" refers to version 3 of the
GNU
General Public License.

"The Library" refers to a covered work governed by this License,
other than an Application or a Combined Work as defined below.

An "Application" is any work that makes use of an interface provided
by the Library, but which is not otherwise based on the Library.
Defining a subclass of a class defined by the Library is deemed a mode
of using an interface provided by the Library.

A "Combined Work" is a work produced by combining or linking an
Application with the Library. The particular version of the Library
with which the Combined Work was made is also called the "Linked
Version".

The "Minimal Corresponding Source" for a Combined Work means the
Corresponding Source for the Combined Work, excluding any source code
for portions of the Combined Work that, considered in isolation, are
based on the Application, and not on the Linked Version.

The "Corresponding Application Code" for a Combined Work means the
object code and/or source code for the Application, including any data
and utility programs needed for reproducing the Combined Work from the

Application, but excluding the System Libraries of the Combined Work.

1. Exception to Section 3 of the GNU GPL.

You may convey a covered work under sections 3 and 4 of this License without being bound by section 3 of the GNU GPL.

2. Conveying Modified Versions.

If you modify a copy of the Library, and, in your modifications, a facility refers to a function or data to be supplied by an Application that uses the facility (other than as an argument passed when the facility is invoked), then you may convey a copy of the modified version:

- a) under this License, provided that you make a good faith effort to ensure that, in the event an Application does not supply the function or data, the facility still operates, and performs whatever part of its purpose remains meaningful, or
- b) under the GNU GPL, with none of the additional permissions of this License applicable to that copy.

3. Object Code Incorporating Material from Library Header Files.

The object code form of an Application may incorporate material from a header file that is part of the Library. You may convey such object code under terms of your choice, provided that, if the incorporated material is not limited to numerical parameters, data structure layouts and accessors, or small macros, inline functions and templates (ten or fewer lines in length), you do both of the following:

- a) Give prominent notice with each copy of the object code that the Library is used in it and that the Library and its use are covered by this License.
- b) Accompany the object code with a copy of the GNU GPL and this license document.

4. Combined Works.

You may convey a Combined Work under terms of your choice that, taken together, effectively do not restrict modification of the portions of the Library contained in the Combined Work and reverse engineering for debugging such modifications, if you also do each of the following:

- a) Give prominent notice with each copy of the Combined Work that

the Library is used in it and that the Library and its use are covered by this License.

b) Accompany the Combined Work with a copy of the GNU GPL and this license document.

c) For a Combined Work that displays copyright notices during execution, include the copyright notice for the Library among these notices, as well as a reference directing the user to the copies of the GNU GPL and this license document.

d) Do one of the following:

0) Convey the Minimal Corresponding Source under the terms of this License, and the Corresponding Application Code in a form suitable for, and under terms that permit, the user to recombine or relink the Application with a modified version of the Linked Version to produce a modified Combined Work, in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.

1) Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (a) uses at run time a copy of the Library already present on the user's computer system, and (b) will operate properly with a modified version of the Library that is interface-compatible with the Linked Version.

e) Provide Installation Information, but only if you would otherwise be required to provide such information under section 6 of the GNU GPL, and only to the extent that such information is necessary to install and execute a modified version of the Combined Work produced by recombining or relinking the Application with a modified version of the Linked Version. (If you use option 4d0, the Installation Information must accompany the Minimal Corresponding Source and Corresponding Application Code. If you use option 4d1, you must provide the Installation Information in the manner specified by section 6 of the GNU GPL for conveying Corresponding Source.)

5. Combined Libraries.

You may place library facilities that are a work based on the Library side by side in a single library together with other library facilities that are not Applications and are not covered by this License, and convey such a combined library under terms of your choice, if you do both of the following:

- a) Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities, conveyed under the terms of this License.
- b) Give prominent notice with the combined library that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.

6. Revised Versions of the GNU Lesser General Public License.

The Free Software Foundation may publish revised and/or new versions of the GNU Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library as you received it specifies that a certain numbered version of the GNU Lesser General Public License "or any later version" applies to it, you have the option of following the terms and conditions either of that published version or of any later version published by the Free Software Foundation. If the Library as you received it does not specify a version number of the GNU Lesser General Public License, you may choose any version of the GNU Lesser General Public License ever published by the Free Software Foundation.

If the Library as you received it specifies that a proxy can decide whether future versions of the GNU Lesser General Public License shall apply, that proxy's public statement of acceptance of any version is permanent authorization for you to choose that version for the Library.

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use,
reproduction,
and distribution as defined by Sections 1 through 9 of this
document.

"Licensor" shall mean the copyright owner or entity authorized
by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under
common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of
the
outstanding shares, or (iii) beneficial ownership of such
entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making
modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work

(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,

worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one

of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS,

WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include

the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity.

For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or

Derivative Works

thereof, that is intentionally submitted to Licensor for inclusion in the Work
by the copyright owner or by an individual or Legal Entity authorized to submit
on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and
issue tracking systems that are managed by, or on behalf of, the Licensor for
the purpose of discussing and improving the Work, but excluding communication
that is conspicuously marked or otherwise designated in writing by the copyright
owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf
of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License.

Subject to the terms and conditions of this License, each Contributor hereby
grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free,
irrevocable copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the Work and such
Derivative Works in Source or Object form.

3. Grant of Patent License.

Subject to the terms and conditions of this License, each Contributor hereby
grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free,
irrevocable (except as stated in this section) patent license to make, have
made, use, offer to sell, sell, import, and otherwise transfer the Work, where
such license applies only to those patent claims licensable by such Contributor
that are necessarily infringed by their Contribution(s) alone or by combination

of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution.

You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and
You must cause any modified files to carry prominent notices stating that You changed the files; and
You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative

Works that
You distribute, alongside or as an addendum to the NOTICE text from
the Work,
provided that such additional attribution notices cannot be construed
as
modifying the License.
You may add Your own copyright statement to Your modifications and may
provide
additional or different license terms and conditions for use,
reproduction, or
distribution of Your modifications, or for any such Derivative Works
as a whole,
provided Your use, reproduction, and distribution of the Work
otherwise complies
with the conditions stated in this License.

5. Submission of Contributions.

Unless You explicitly state otherwise, any Contribution intentionally
submitted
for inclusion in the Work by You to the Licensor shall be under the
terms and
conditions of this License, without any additional terms or
conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of
any separate license agreement you may have executed with Licensor
regarding
such Contributions.

6. Trademarks.

This License does not grant permission to use the trade names,
trademarks,
service marks, or product names of the Licensor, except as required
for
reasonable and customary use in describing the origin of the Work and
reproducing the content of the NOTICE file.

7. Disclaimer of Warranty.

Unless required by applicable law or agreed to in writing, Licensor
provides the
Work (and each Contributor provides its Contributions) on an "AS IS"
BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied,
including, without limitation, any warranties or conditions of TITLE,
NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR
PURPOSE. You are

solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability.

In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability.

While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

README.md
```

```
# lua-resty-acme
```

Automatic Let's Encrypt certificate serving (RSA + ECC) and pure Lua implementation of the ACMEv2 protocol.

`http-01` and `tls-alpn-01` challenges are supported.

```

Description

=====

This library consists of two parts:

- `resty.acme.autossl`: automatic lifecycle management of Let's Encrypt certificates
- `resty.acme.client`: Lua implementation of ACME v2 protocol

Install using opm:

```
```shell
opm install fffonion/lua-resty-acme
```
```

Alternatively, to install using luarocks:

```
```shell
luarocks install lua-resty-acme
```

```
manually install a luafilesystem
luarocks install luafilesystem
````
```

Note you will need to manually install `luafilesystem` when using LuaRocks. This is made to maintain backward compatibility.

This library uses [an FFI-based openssl backend](<https://github.com/fffonion/lua-resty-openssl>), which currently supports OpenSSL `1.1.1`, `1.1.0` and `1.0.2` series.

[Back to TOC](#table-of-contents)

Status
=====

Production.

Synopsis
=====

Create account private key and fallback certs:

```
```shell
create account key
openssl genpkey -algorithm RSA -pkeyopt rsa_keygen_bits:4096 -out /
etc/openresty/account.key
create fallback cert and key
openssl req -newkey rsa:2048 -nodes -keyout /etc/openresty/default.key
-x509 -days 365 -out /etc/openresty/default.pem
```
```

Use the following example config:

```
```lua
events {}

http {
 resolver 8.8.8.8 ipv6=off;

 lua_shared_dict acme 16m;

 # required to verify Let's Encrypt API
 lua_ssl_trusted_certificate /etc/ssl/certs/ca-certificates.crt;
 lua_ssl_verify_depth 2;

 init_by_lua_block {
 require("resty.acme.autossl").init({
```

```

 -- setting the following to true
 -- implies that you read and accepted https://
letsencrypt.org/repository/
 tos_accepted = true,
 -- uncomment following for first time setup
 -- staging = true,
 -- uncomment following to enable RSA + ECC double cert
 -- domain_key_types = { 'rsa', 'ecc' },
 -- uncomment following to enable tls-alpn-01 challenge
 -- enabled_challenge_handlers = { 'http-01', 'tls-
alpn-01' },
 account_key_path = "/etc/openresty/account.key",
 account_email = "youemail@youdomain.com",
 domain_whitelist = { "example.com" },
 })
}

init_worker_by_lua_block {
 require("resty.acme.autossl").init_worker()
}

server {
 listen 80;
 listen 443 ssl;
 server_name example.com;

 # fallback certs, make sure to create them before hand
 ssl_certificate /etc/openresty/default.pem;
 ssl_certificate_key /etc/openresty/default.key;

 ssl_certificate_by_lua_block {
 require("resty.acme.autossl").ssl_certificate()
 }

 location /.well-known {
 content_by_lua_block {
 require("resty.acme.autossl").serve_http_challenge()
 }
 }
}
}
...

```

When testing deployment, it's recommended to uncomment the `staging = true` to allow an end-to-end test of your environment. This can avoid configuration failure result into too many requests that hits [rate limiting](https://letsencrypt.org/docs/rate-limits/) on Let's Encrypt API.

By default ``autossll`` only creates RSA certificates. To use ECC certificates or both, uncomment ``domain_key_types = { 'rsa', 'ecc' }``. Note that multiple certificate chain is only supported by NGINX 1.11.0 or later.

A certificate will be *\*queued\** to create after Nginx seen request with such SNI, which might take tens of seconds to finish. During the meantime, requests with such SNI are responded with the fallback certificate.

Note that ``domain_whitelist`` or ``domain_whitelist_callback`` must be set to include your domain that you wish to server autossll, to prevent potential abuse using fake SNI in SSL handshake.

``domain_whitelist`` defines a table that includes all domains should be included, and

``domain_whitelist_callback`` defines a function that accepts domain as parameter and return boolean to indicate if it should be included.

```
```lua
domain_whitelist = { "domain1.com", "domain2.com", "domain3.com" },
```
```

To match a pattern in your domain name, for example all subdomains under ``example.com``, use:

```
```lua
domain_whitelist_callback = function(domain)
    return ngx.re.match(domain, [[\..example\.com$]], "jo")
end
```
```

Furthermore, since checking domain whitelist is running in certificate phase.

It's possible to use cosocket API here. Do note that this will increase the SSL handshake latency.

```
```lua
domain_whitelist_callback = function(domain)
    -- send HTTP request
    local http = require("resty.http")
    local res, err = http:request_uri("http://example.com")
    -- access the storage
    local value, err =
require("resty.acme.autossll").storage:get("key")
    -- do something to check the domain
    -- return is_domain_included
end}},
```

```

## tls-alpn-01 challenge

tls-alpn-01 challenge is currently supported on Openresty `1.15.8.x`,  
`1.17.8.x` and `1.19.3.x`.

<details>

<summary>Click to expand sample config</summary>

```lua

events {}

http {

resolver 8.8.8.8 ipv6=off;

lua_shared_dict acme 16m;

required to verify Let's Encrypt API

lua_ssl_trusted_certificate /etc/ssl/certs/ca-certificates.crt;

lua_ssl_verify_depth 2;

init_by_lua_block {

require("resty.acme.autossl").init({

-- setting the following to true

-- implies that you read and accepted https://

letsencrypt.org/repository/

tos_accepted = true,

-- uncomment following for first time setup

-- staging = true,

-- uncomment following to enable RSA + ECC double cert

-- domain_key_types = { 'rsa', 'ecc' },

-- uncomment following to enable tls-alpn-01 challenge

enabled_challenge_handlers = { 'http-01', 'tls-alpn-01' },

account_key_path = "/etc/openresty/account.key",

account_email = "youemail@youdomain.com",

domain_whitelist = { "example.com" },

storage_adapter = "file",

})

}

init_worker_by_lua_block {

require("resty.acme.autossl").init_worker()

}

server {

listen 80;

listen unix:/tmp/nginx-default.sock ssl;

listen unix:/tmp/nginx-default.sock ssl proxy_protocol;

server_name example.com;

```

# set_real_ip_from unix;;
# real_ip_header proxy_protocol;

# fallback certs, make sure to create them before hand
ssl_certificate /etc/openresty/default.pem;
ssl_certificate_key /etc/openresty/default.key;

ssl_certificate_by_lua_block {
    require("resty.acme.autossl").ssl_certificate()
}

location /.well-known {
    content_by_lua_block {
        require("resty.acme.autossl").serve_http_challenge()
    }
}
}

stream {
    init_worker_by_lua_block {
        require("resty.acme.autossl").init({
            -- setting the following to true
            -- implies that you read and accepted https://
letsencrypt.org/repository/
            tos_accepted = true,
            -- uncomment following for first time setup
            -- staging = true,
            -- uncomment following to enable RSA + ECC double cert
            -- domain_key_types = { 'rsa', 'ecc' },
            -- uncomment following to enable tls-alpn-01 challenge
            enabled_challenge_handlers = { 'http-01', 'tls-alpn-01' },
            account_key_path = "/etc/openresty/account.key",
            account_email = "youemail@youdomain.com",
            domain_whitelist = { "example.com" },
            storage_adapter = "file"
        })
        require("resty.acme.autossl").init_worker()
    }

    map $ssl_preread_alpn_protocols $backend {
        ~\bacme-tls/1\b unix:/tmp/nginx-tls-alpn.sock;
        default unix:/tmp/nginx-default.sock;
    }

    server {
        listen 443;
        listen [::]:443;
    }
}

```

```

        ssl_preread on;
        proxy_pass $backend;

        # proxy_protocol on;
    }

    server {
        listen unix:/tmp/nginx-tls-alpn.sock ssl;
        # listen nix:/tmp/nginx-tls-alpn.sock ssl proxy_protocol;
        ssl_certificate certs/default.pem;
        ssl_certificate_key certs/default.key;

        # requires --with-stream_realip_module
        # set_real_ip_from unix;;

        ssl_certificate_by_lua_block {
require("resty.acme.autossl").serve_tls_alpn_challenge()
        }

        content_by_lua_block {
            ngx.exit(0)
        }
    }
}
...

```

</details>

In the above sample config, we set a http server and two stream server.

The very front stream server listens for 443 port and route to different upstream based on client ALPN. The tls-alpn-01 responder listens on `unix:/tmp/nginx-tls-alpn.sock`.

All normal https traffic listens on `unix:/tmp/nginx-default.sock`.

...

```

[stream server unix:/
tmp/nginx-tls-alpn.sock ssl]
Y /
[stream server 443] --- ALPN is acme-tls ?
N \
[http server unix:/
tmp/nginx-default.sock ssl]
...

```

- The config passed to `require("resty.acme.autossl").init` in both subsystem should be

kept same as possible.

- `tls-alpn-01` challenge handler doesn't need any third party dependency.
- You can enable `http-01` and `tls-alpn-01` challenge handlers at the same time.
- `http` and `stream` subsystem doesn't share shm, thus considering use a storage other than `shm`. If you must use `shm`, you will need to apply [this patch](<https://github.com/fffonion/lua-resty-shdict-server/tree/master/patches>).
- `tls-alpn-01` challenge handler is considered experimental.

```
## resty.acme.autossl
```

A config table can be passed to `resty.acme.autossl.init()`, the default values are:

```
```lua
default_config = {
 -- accept term of service https://letsencrypt.org/repository/
 tos_accepted = false,
 -- if using the let's encrypt staging API
 staging = false,
 -- the path to account private key in PEM format
 account_key_path = nil,
 -- the account email to register
 account_email = nil,
 -- number of certificate cache, per type
 cache_size = 100,
 domain_key_paths = {
 -- the global domain RSA private key
 rsa = nil,
 -- the global domain ECC private key
 ecc = nil,
 },
 -- the private key algorithm to use, can be one or both of
 -- 'rsa' and 'ecc'
 domain_key_types = { 'rsa' },
 -- restrict registering new cert only with domain defined in this
table
 domain_whitelist = nil,
 -- restrict registering new cert only with domain checked by this
function
 domain_whitelist_callback = nil,
 -- the threshold to renew a cert before it expires, in seconds
 renew_threshold = 7 * 86400,
 -- interval to check cert renewal, in seconds
 renew_check_interval = 6 * 3600,
 -- the store certificates
 storage_adapter = "shm",
}
```

```

 -- the storage config passed to storage adapter
 storage_config = {
 shm_name = 'acme',
 },
}

```

If ``account_key_path`` is not specified, a new account key will be created

**everytime** Nginx reloads configuration. Note this may trigger **New Account** [rate limiting](https://letsencrypt.org/docs/rate-limits/) on Let's Encrypt API.

If ``domain_key_paths`` is not specified, a new private key will be generated for each certificate (4096-bits RSA and 256-bits prime256v1 ECC). Note that generating such key will block worker and will be especially noticable on VMs where entropy is low.

See also [Storage Adapters](#storage-adapters) below.

To use a CA provider other than Let's Encrypt, pass ``api_uri`` in a table as second parameter:

```

```lua
resty.acme.autossl.init({
    tos_accepted = true,
    account_email = "example@example.com",
}, {
    api_uri = "https://acme.otherca.com/directory",
})

```

autossl.get_certkey

syntax: `*certkey, err = autossl.get_certkey(domain, type?)*`

Return the PEM-encoded certificate and private key for ``domain`` from storage. Optionally accepts a ``type`` parameter which can be ``"rsa"`` or ``"ecc"``; if omitted, ``type`` will default to ``"rsa"``.

[Back to TOC](#table-of-contents)

resty.acme.client

client.new

****syntax**:** *c, err = client.new(config)*

Create a ACMEv2 client.

Default values for `config` are:

```
```lua
default_config = {
 -- the ACME v2 API endpoint to use
 api_uri = "https://acme-v02.api.letsencrypt.org/directory",
 -- the account email to register
 account_email = nil,
 -- the account key in PEM format text
 account_key = nil,
 -- the account kid (as an URL)
 account_kid = nil,
 -- external account binding key id
 eab_kid = nil,
 -- external account binding hmac key, base64url encoded
 eab_hmac_key = nil,
 -- external account registering handler
 eab_handler = nil,
 -- the storage config passed to storage adapter
 storage_config = {
 shm_name = "acme"
 },
 -- the challenge types enabled, selection of `http-01` and `tls-
 alpn-01`
 enabled_challenge_handlers = {"http-01"}
}
```
```

If `account_kid` is omitted, user must call `client:new_account()` to register a new account. Note that when using the same `account_key`, `client:new_account()` will return the same `kid` that is previously registered.

If CA requires [External Account Binding](#external-account-binding), user can set `eab_kid` and `eab_hmac_key` to load an existing account, or set `account_email` and `eab_handler` to register a new account. `eab_hmac_key` must be base64 url encoded. In later case, user must call `client:new_account()` to register a new account. `eab_handler` must be an function that accepts account_email as

parameter and
returns `eab_kid`, `eab_hmac_key` and error if any.

```
```lua
eab_handler = function(account_email)
 -- do something to register an account with account_email
 -- if err then
 -- return nil, nil, err
 -- end
 return eab_kid, eab_hmac_key
end
```
```

The following CA provider's EAB handler is supported by lua-resty-acme and user doesn't need to implement their own `eab_handler`:

- [ZeroSSL](https://zerossl.com/)

See also [Storage Adapters](#storage-adapters) below.

[Back to TOC](#table-of-contents)

client:init

****syntax**:** *err = client:init()*

Initialize the client, requires availability of cosocket API. This function will login or register an account.

[Back to TOC](#table-of-contents)

client:order_certificate

****syntax**:** *err = client:order_certificate(domain,...)*

Create a certificate with one or more domains. Note that wildcard domains are not supported as it can only be verified by [dns-01](https://letsencrypt.org/docs/challenge-types/) challenge.

[Back to TOC](#table-of-contents)

client:serve_http_challenge

****syntax**:** *client:serve_http_challenge()*

Serve [http-01](https://letsencrypt.org/docs/challenge-types/) challenge. A common use case will be to

put this as a `content_by_*` block for ``/.well-known`` path.

[Back to TOC](#table-of-contents)

client:serve_tls_alpn_challenge

****syntax**:** `*client:serve_tls_alpn_challenge()*`

Serve [tls-alpn-01](https://letsencrypt.org/docs/challenge-types/) challenge. See [this section](https://github.com/fffonion/lua-resty-acme#tls-alpn-01-challenge) on how to use this handler.

[Back to TOC](#table-of-contents)

Storage Adapters

Storage adapters are used in ``autossl`` or `acme`client`` to store temporary or persistent data. Depending on the deployment environment, there're currently five storage adapters available to select from. To implement a custom storage adapter, please refer to [this doc](https://github.com/fffonion/lua-resty-acme/blob/master/lib/resty/acme/storage/README.md).

file

Filesystem based storage. Sample configuration:

```
```lua
storage_config = {
 dir = '/etc/openresty/storage',
}
```
```

If ``dir`` is omitted, the OS temporary directory will be used.

``luafilesystem`` or ``luafilesystem-ffi`` is needed when using the ``file`` storage for renewal.

shm

Lua shared dict based storage. Note this storage is volatile between Nginx restarts (not reloads). Sample configuration:

```
```lua
storage_config = {
```

```
 shm_name = 'dict_name',
 }
 ...
```

### ### redis

Redis based storage. The default config is:

```
```lua  
storage_config = {  
  host = '127.0.0.1',  
  port = 6379,  
  database = 0,  
  -- Redis authentication key  
  auth = nil,  
}  
...
```

Redis >= 2.6.0 is required as this storage requires [PEXPIRE](<https://redis.io/commands/pexpire>).

vault

Hashicorp [Vault](<https://www.vaultproject.io/>) based storage.
Only [KV V2](<https://www.vaultproject.io/api/secret/kv/kv-v2.html>)
backend is supported.
The default config is:

```
```lua  
storage_config = {
 host = '127.0.0.1',
 port = 8200,
 -- secrets kv prefix path
 kv_path = "acme",
 -- timeout in ms
 timeout = 2000,
 -- use HTTPS
 https = false,
 -- turn on tls verification
 tls_verify = true
 -- SNI used in request, default to host if omitted
 tls_server_name = nil,
 -- Auth Method, default to token, can be "token" or "kubernetes"
 auth_method = "token"
 -- Vault token
 token = nil,
 -- Vault's authentication path to use
 auth_path = "kubernetes",
 -- The role to try and assign
```

```

 auth_role = nil,
 -- The path to the JWT
 jwt_path = "/var/run/secrets/kubernetes.io/serviceaccount/token",
}

```

#### #### Support for different auth method

- Token: This is the default and allows to pass a literal "token" in the configuration

- Kubernetes: Via this method, one can utilize vault's built-in auth method for kubernetes

What this basically this is take the service account token and validates it has been signed by Kubernetes CA.

The major benefit here, is that config files don't expose your token anymore.

The following configurations apply here:

```

```lua
-- Vault's authentication path to use
auth_path = "kubernetes",
-- The role to try and assign
auth_role = nil,
-- The path to the JWT
jwt_path = "/var/run/secrets/kubernetes.io/serviceaccount/token",
```

```

#### ### consul

Hashicorp [Consul](https://www.consul.io/) based storage. The default config is:

```

```lua
storage_config = {
  host = '127.0.0.1',
  port = 8500,
  -- kv prefix path
  kv_path = "acme",
  -- Consul ACL token
  token = nil,
  -- timeout in ms
  timeout = 2000,
}
```

```

#### ### etcd

[etcd](https://etcd.io) based storage. Right now only `v2` protocol is supported.

The default config is:

```
```lua
storage_config = {
    http_host = 'http://127.0.0.1:4001',
    protocol = 'v2',
    key_prefix = '',
    timeout = 60,
    ssl_verify = false,
}
```
```

Etc storage requires [lua-resty-etcd](<https://github.com/api7/lua-resty-etcd>) library to installed.  
It can be manually installed with `opm install api7/lua-resty-etcd` or `luarocks install lua-resty-etcd`.

This library is production ready.

## Synopsis

=====

```

```lua
    lua_package_path "/path/to/lua-resty-cookie/lib/?.lua;;";

    server {
        location /test {
            content_by_lua '
                local ck = require "resty.cookie"
                local cookie, err = ck:new()
                if not cookie then
                    ngx.log(ngx.ERR, err)
                    return
                end

                -- get single cookie
                local field, err = cookie:get("lang")
                if not field then
                    ngx.log(ngx.ERR, err)
                    return
                end
                ngx.say("lang", " => ", field)

                -- get all cookies
                local fields, err = cookie:get_all()
                if not fields then
                    ngx.log(ngx.ERR, err)
                    return
                end

                for k, v in pairs(fields) do
                    ngx.say(k, " => ", v)
                end
            '
        }
    }

```

```

-- set one cookie
local ok, err = cookie:set({
    key = "Name", value = "Bob", path = "/",
    domain = "example.com", secure = true, httponly =
true,
    expires = "Wed, 09 Jun 2021 10:18:14 GMT", max_age
= 50,
    samesite = "Strict", extension = "a4334aebaec"
})
if not ok then
    ngx.log(ngx.ERR, err)
    return
end

-- set another cookie, both cookies will appear in
HTTP response
local ok, err = cookie:set({
    key = "Age", value = "20",
})
if not ok then
    ngx.log(ngx.ERR, err)
    return
end
';
}
... }

```

Methods

=====

[Back to TOC](#table-of-contents)

new

`syntax: cookie_obj = cookie()`

Create a new cookie object for current request. You can get parsed cookie from client or set cookie to client later using this object.

[Back to TOC](#table-of-contents)

get

`syntax: cookie_val, err = cookie_obj:get(cookie_name)`

Get a single client cookie value. On error, returns `nil` and an error message.

[Back to TOC](#table-of-contents)

get_all

`syntax: fields, err = cookie_obj:get_all()`

Get all client cookie key/value pairs in a lua table. On error, returns `nil` and an error message.

[Back to TOC](#table-of-contents)

set

```lua  
syntax: ok, err = cookie\_obj:set({  
 key = "Name",  
 value = "Bob",  
 path = "/",  
 domain = "example.com",  
 secure = true, httponly = true,  
 expires = "Wed, 09 Jun 2021 10:18:14 GMT",  
 max\_age = 50,  
 samesite = "Strict",  
 extension = "a4334aebaec"  
})  
```

Set a cookie to client. This will add a new 'Set-Cookie' response header. `key` and `value` are required, all other fields are optional. If the same cookie (whole cookie string, e.g. "Name=Bob; Expires=Wed, 09 Jun 2021 10:18:14 GMT; Max-Age=50; Domain=example.com; Path=/; Secure; HttpOnly;") has already been setted, new cookie will be ignored.

[Back to TOC](#table-of-contents)

Installation

=====

You need to compile [ngx_lua](https://github.com/chaoslawful/lua-nginx-module/tags) with your Nginx.

You need to configure the [lua_package_path](https://github.com/chaoslawful/lua-nginx-module#lua_package_path) directive to add the path of your `lua-resty-cookie` source tree to ngx_lua's Lua module search path, as in

```
# nginx.conf  
http {  
    lua_package_path "/path/to/lua-resty-cookie/lib/?.lua;;";
```

```
    ...  
}
```

and then load the library in Lua:

```
local ck = require "resty.cookie"
```

Synopsis

=====

```
```lua
-- file myapp.lua: example "myapp" module

local _M = {}

-- alternatively: local lrucache = require "resty.lrucache.pureffi"
local lrucache = require "resty.lrucache"

-- we need to initialize the cache on the lua module level so that
-- it can be shared by all the requests served by each nginx worker
process:
local c, err = lrucache.new(200) -- allow up to 200 items in the
cache
if not c then
 error("failed to create the cache: " .. (err or "unknown"))
end

function _M.go()
 c:set("dog", 32)
 c:set("cat", 56)
 ngx.say("dog: ", c:get("dog"))
 ngx.say("cat: ", c:get("cat"))

 c:set("dog", { age = 10 }, 0.1) -- expire in 0.1 sec
 c:delete("dog")

 c:flush_all() -- flush all the cached data
end

return _M
```

```nginx
nginx.conf

http {
 # only if not using an official OpenResty release

 server {
 listen 8080;

 location = /t {
 content_by_lua_block {
 require("myapp").go()
 }
 }
 }
}
```

```

 }
}
},

```

## Description

=====

This library implements a simple LRU cache for [OpenResty](<https://openresty.org>) and the [ngx\_lua](<https://github.com/openresty/lua-nginx-module>) module.

This cache also supports expiration time.

The LRU cache resides completely in the Lua VM and is subject to Lua GC. As such, do not expect it to get shared across the OS process boundary. The upside is that you can cache arbitrary complex Lua values (such as deep nested Lua tables) without the overhead of serialization (as with `ngx\_lua`'s [shared dictionary API]([https://github.com/openresty/lua-nginx-module#lua\\_shared\\_dict](https://github.com/openresty/lua-nginx-module#lua_shared_dict))). The downside is that your cache is always limited to the current OS process (i.e. the current Nginx worker process). It does not really make much sense to use this library in the context of [init\_by\_lua]([https://github.com/openresty/lua-nginx-module#lua\\_shared\\_dict](https://github.com/openresty/lua-nginx-module#lua_shared_dict)) because the cache will not get shared by any of the worker processes (unless you just want to "warm up" the cache with predefined items which will get inherited by the workers via `fork()`).

This library offers two different implementations in the form of two classes: `resty.lrucache` and `resty.lrucache.pureffi`. Both implement the same API.

The only difference is that the latter is a pure FFI implementation that also implements an FFI-based hash table for the cache lookup, while the former uses native Lua tables.

If the cache hit rate is relatively high, you should use the `resty.lrucache` class which is faster than `resty.lrucache.pureffi`.

However, if the cache hit rate is relatively low and there can be a \*lot\* of variations of keys inserted into and removed from the cache, then you should use the ``resty.lrucache.pureffi`` instead, because Lua tables are not good at removing keys frequently. You would likely see the ``resizetab`` function call in the LuaJIT runtime being very hot in [on-CPU flame graphs](<https://github.com/openresty/stapxx#lj-lua-stacks>) if you use the ``resty.lrucache`` class instead of ``resty.lrucache.pureffi`` in such a use case.

[Back to TOC](#table-of-contents)

## Methods

=====

To load this library,

1. use an official [OpenResty release](<https://openresty.org>) or follow the [Installation](#installation) instructions.
2. use ``require`` to load the library into a local Lua variable:

```
```lua
local lrucache = require "resty.lrucache"
```
```

or

```
```lua
local lrucache = require "resty.lrucache.pureffi"
```
```

[Back to TOC](#table-of-contents)

## new

---

```
`syntax: cache, err = lrucache.new(max_items [, load_factor])`
```

Creates a new cache instance. Upon failure, returns ``nil`` and a string describing the error.

The ``max_items`` argument specifies the maximal number of items this cache can hold.

The ``load-factor`` argument designates the "load factor" of the FFI-based hash-table used internally by ``resty.lrucache.pureffi``; the default value is 0.5 (i.e. 50%); if the load factor is specified, it will be clamped to the range of ``[0.1, 1]`` (i.e. if load factor is greater than 1, it will be saturated to 1; likewise, if load-factor is smaller than ``0.1``, it will be clamped to ``0.1``). This argument is only meaningful for ``resty.lrucache.pureffi``.

[Back to TOC](#table-of-contents)

set

---

``syntax: cache:set(key, value, ttl?, flags?)``

Sets a key with a value and an expiration time.

When the cache is full, the cache will automatically evict the least recently used item.

The optional ``ttl`` argument specifies the expiration time. The time value is in seconds, but you can also specify the fraction number part (e.g. ``0.25``). A nil ``ttl`` argument means the value would never expire (which is the default).

The optional ``flags`` argument specifies a user flags value associated with the item to be stored. It can be retrieved later with the item. The user flags are stored as an unsigned 32-bit integer internally, and thus must be specified as a Lua number. If not specified, flags will have a default value of ``0``. This argument was added in the ``v0.10`` release.

[Back to TOC](#table-of-contents)

get

---

``syntax: data, stale_data, flags = cache:get(key)``

Fetches a value with the key. If the key does not exist in the cache or has already expired, ``nil`` will be returned.

Starting from `v0.03`, the stale data is also returned as the second return value if available.

Starting from `v0.10`, the user flags value associated with the stored item is also returned as the third return value. If no user flags were given to an item, its default flags will be `0`.

[Back to TOC](#table-of-contents)

delete

-----

`syntax: cache:delete(key)`

Removes an item specified by the key from the cache.

[Back to TOC](#table-of-contents)

count

-----

`syntax: count = cache:count()`

Returns the number of items currently stored in the cache  
\*\*including\*\*  
expired items if any.

The returned `count` value will always be greater or equal to 0 and smaller than or equal to the `size` argument given to [`cache:new`](#new).

This method was added in the `v0.10` release.

[Back to TOC](#table-of-contents)

capacity

-----

`syntax: size = cache:capacity()`

Returns the maximum number of items the cache can hold. The return value is the same as the `size` argument given to [`cache:new`](#new) when the cache was created.

This method was added in the `v0.10` release.

[Back to TOC](#table-of-contents)

## get\_keys

``syntax: keys = cache:get_keys(max_count?, res?)``

Fetch the list of keys currently inside the cache up to ``max_count``.  
The keys  
will be ordered in MRU fashion (Most-Recently-Used keys first).

This function returns a Lua (array) table (with integer keys)  
containing the  
keys.

When ``max_count`` is ``nil`` or ``0``, all keys (if any) will be returned.

When provided with a ``res`` table argument, this function will not  
allocate a  
table and will instead insert the keys in ``res``, along with a trailing  
``nil``  
value.

This method was added in the ``v0.10`` release.

[Back to TOC](#table-of-contents)

## flush\_all

``syntax: cache:flush_all()``

Flushes all the existing data (if any) in the current cache instance.  
This is  
an ``O(1)`` operation and should be much faster than creating a brand  
new cache  
instance.

Note however that the ``flush_all()`` method of ``resty.lrucache.pureffi``  
is an  
``O(n)`` operation.

[Back to TOC](#table-of-contents)

## Prerequisites

- \* [LuaJIT](<http://luajit.org>) 2.0+
- \* [ngx\_lua](<https://github.com/openresty/lua-nginx-module>) 0.8.10+

[Back to TOC](#table-of-contents)

## Installation

=====

It is recommended to use the latest [OpenResty release](<https://openresty.org>).

At least OpenResty 1.4.2.9 is required. Recent versions of OpenResty only

support LuaJIT, but if you are using an older version, make sure to enable

LuaJIT when building OpenResty by passing the `--with-luajit` option to its

`./configure` script. No extra Nginx configuration is required.

If you want to use this library with your own Nginx build (with ngx\_lua), then

you need to ensure you are using ngx\_lua 0.8.10 or greater. When not using an

OpenResty release, you also need to configure the

[lua\_package\_path]([https://github.com/openresty/lua-nginx-module#lua\\_package\\_path](https://github.com/openresty/lua-nginx-module#lua_package_path))

directive to add the path to your lua-resty-lrucache source tree to ngx\_lua's

Lua module search path, as in:

```
```nginx
# nginx.conf

    http {
        # only if not using an official OpenResty release
        lua_package_path "/path/to/lua-resty-lrucache/lib/?.lua;";
        ...
    }
...`
```

and then load the library in Lua:

```
```lua
local lrucache = require "resty.lrucache"
...`
```

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims

licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed

as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and

grossly  
negligent acts) or agreed to in writing, shall any Contributor  
be  
liable to You for damages, including any direct, indirect,  
special,  
incidental, or consequential damages of any character arising as  
a  
result of this License or out of the use or inability to use the  
Work (including but not limited to damages for loss of goodwill,  
work stoppage, computer failure or malfunction, or any and all  
other commercial damages or losses), even if such Contributor  
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing  
the Work or Derivative Works thereof, You may choose to offer,  
and charge a fee for, acceptance of support, warranty,  
indemnity,  
or other liability obligations and/or rights consistent with  
this  
License. However, in accepting such obligations, You may act  
only  
on Your own behalf and on Your sole responsibility, not on  
behalf  
of any other Contributor, and only if You agree to indemnify,  
defend, and hold each Contributor harmless for any liability  
incurred by, or claims asserted against, such Contributor by  
reason  
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following  
boilerplate notice, with the fields enclosed by brackets "{}"  
replaced with your own identifying information. (Don't include  
the brackets!) The text should be enclosed in the appropriate  
comment syntax for the file format. We also recommend that a  
file or class name and description of purpose be included on the  
same "printed page" as the copyright notice for easier  
identification within third-party archives.

Copyright {yyyy} {name of copyright owner}

@version 1.4.0  
@date 2015-10-26  
@stability 3 - Stable

Natural Compare &ndash; [![[Build]]][1] [![[Coverage]]][2]  
=====

Compare strings containing a mix of letters and numbers  
in the way a human being would in sort order.  
This is described as a "natural ordering".

```
```text
Standard sorting:   Natural order sorting:
    img1.png         img1.png
    img10.png        img2.png
    img12.png        img10.png
    img2.png         img12.png
```
```

String.naturalCompare returns a number indicating  
whether a reference string comes before or after or is the same  
as the given string in sort order.  
Use it with builtin sort() function.

### ### Installation

– In browser

```
```html
<script src=min.natural-compare.js></script>
```
```

– In node.js: `npm install natural-compare-lite`

```
```javascript
require("natural-compare-lite")
```
```

### ### Usage

```
```javascript
// Simple case sensitive example
var a = ["z1.doc", "z10.doc", "z17.doc", "z2.doc", "z23.doc",
"z3.doc"];
a.sort(String.naturalCompare);
// ["z1.doc", "z2.doc", "z3.doc", "z10.doc", "z17.doc", "z23.doc"]

// Use wrapper function for case insensitivity
a.sort(function(a, b){
    return String.naturalCompare(a.toLowerCase(), b.toLowerCase());
})
```
```

```
// In most cases we want to sort an array of objects
var a = [{"street":"350 5th Ave", "room":"A-1021"}
 , {"street":"350 5th Ave", "room":"A-21046-b"}];

// sort by street, then by room
a.sort(function(a, b){
 return String.naturalCompare(a.street, b.street) ||
 String.naturalCompare(a.room, b.room);
});

// When text transformation is needed (eg toLowerCase()),
// it is best for performance to keep
// transformed key in that object.
// There are no need to do text transformation
// on each comparison when sorting.
var a = [{"make":"Audi", "model":"A6"}
 , {"make":"Kia", "model":"Rio"}];

// sort by make, then by model
a.map(function(car){
 car.sort_key = (car.make + " " + car.model).toLowerCase();
})
a.sort(function(a, b){
 return String.naturalCompare(a.sort_key, b.sort_key);
})
```

- Works well with dates in ISO format eg "Rev 2012-07-26.doc".

```

Custom alphabet

It is possible to configure a custom alphabet to achieve a desired order.

```
```javascript
// Estonian alphabet
String.alphabet =
"ABDEFGHIJKLMNOPRSŠŽTUVÕÄÖÜXYabdefghijklmnoprsšžtuvõäöüxy"
["t", "z", "x", "õ"].sort(String.naturalCompare)
// ["z", "t", "õ", "x"]

// Russian alphabet
String.alphabet =
"АБВГДЕЁЖЗИЙКЛМНОПРСТУФХЦЧШЩЪЫЬЭЮЯабвгдеёжзийклмнопрстуфхцчшщъыьэюя"
["Ё", "А", "Б"].sort(String.naturalCompare)
// ["А", "Б", "Ё"]
```
```

@cnakazawa/watch@1.0.4

<https://github.com/mikeal/watch>
<https://raw.githubusercontent.com/mikeal/watch/master/LICENSE>

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the

interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or

redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the

interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,

where such license applies only to those patent claims
licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If

You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes

direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute

must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file

distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;

or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The

contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,

alongside
or as an addendum to the NOTICE text from the Work, provided

that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation

source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and

attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute
must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file
distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;
or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The
contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,
alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications
and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies
with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state
otherwise,
any Contribution intentionally submitted for inclusion in the
Work
by You to the Licensor shall be under the terms and conditions
of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or
modify
the terms of any separate license agreement you may have
executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the
trade

names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by

reason

of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use,
reproduction,
and distribution as defined by Sections 1 through 9 of this

document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including

the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s)

with the Work to which such Contribution(s) was submitted. If
You institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes
direct or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

- (a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute
must include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file
distributed as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;
or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The
contents of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,
alongside or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications

and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any

risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and

grossly

negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct, indirect,
special,
incidental, or consequential damages of any character arising as
a

result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty,
indemnity,
or other liability obligations and/or rights consistent with
this
License. However, in accepting such obligations, You may act
only
on Your own behalf and on Your sole responsibility, not on
behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by
reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "{}"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

<https://raw.githubusercontent.com/Kong/kongponents/master/LICENSE>

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but

not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor

and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,

use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims

licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly

negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct, indirect, special,

incidental, or consequential damages of any character arising as a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity,

or other liability obligations and/or rights consistent with this

License. However, in accepting such obligations, You may act only

on Your own behalf and on Your sole responsibility, not on behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason

of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use,
reproduction,
and distribution as defined by Sections 1 through 9 of this
document.

"Licensor" shall mean the copyright owner or entity authorized
by

the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright

owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent

to the Licensor or its representatives, including but not limited to

communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,

use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims

licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes
direct

or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

- (a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications
and

may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,

reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or

Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

Object "Derivative Works" shall mean any work, whether in Source or form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions

of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,

use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims

licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained

within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or

agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under

common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of

the

outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object

form, that is based on (or derived from) the Work and for which the

editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes

of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition,

"submitted"

means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate

as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the
Work
by You to the Licensor shall be under the terms and conditions
of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or
modify
the terms of any separate license agreement you may have
executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the
trade
names, trademarks, service marks, or product names of the
Licensor,
except as required for reasonable and customary use in
describing the
origin of the Work and reproducing the content of the NOTICE
file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or
conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining
the
appropriateness of using or redistributing the Work and assume
any
risks associated with Your exercise of permissions under this
License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and
grossly
negligent acts) or agreed to in writing, shall any Contributor
be
liable to You for damages, including any direct, indirect,
special,
incidental, or consequential damages of any character arising as
a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor

has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of,

publicly display, publicly perform, sublicense, and distribute
the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;
or,
within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or

conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining

the

appropriateness of using or redistributing the Work and assume

any

risks associated with Your exercise of permissions under this

License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and

grossly

negligent acts) or agreed to in writing, shall any Contributor

be

liable to You for damages, including any direct, indirect,

special,

incidental, or consequential damages of any character arising as

a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty,

indemnity,

or other liability obligations and/or rights consistent with

this

License. However, in accepting such obligations, You may act

only

on Your own behalf and on Your sole responsibility, not on

behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by

reason

of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a

file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

<https://raw.githubusercontent.com/Kong/kongponents/master/LICENSE>

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or

otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not

limited to
communication on electronic mailing lists, source code control
systems,
and issue tracking systems that are managed by, or on behalf of,
the
Licensor for the purpose of discussing and improving the Work,
but
excluding communication that is conspicuously marked or
otherwise
designated in writing by the copyright owner as "Not a
Contribution."

"Contributor" shall mean Licensor and any individual or Legal
Entity
on behalf of whom a Contribution has been received by Licensor
and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions
of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute
the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have
made,
use, offer to sell, sell, import, and otherwise transfer the
Work,
where such license applies only to those patent claims
licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If
You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes
direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without

modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the

Work

by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer,

and charge a fee for, acceptance of support, warranty,
indemnity,
or other liability obligations and/or rights consistent with
this
License. However, in accepting such obligations, You may act
only
on Your own behalf and on Your sole responsibility, not on
behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by
reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the

editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and

wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use,
reproduction,
and distribution as defined by Sections 1 through 9 of this
document.

"Licensor" shall mean the copyright owner or entity authorized
by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under
common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of
the
outstanding shares, or (iii) beneficial ownership of such
entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of,

the
Licensor for the purpose of discussing and improving the Work,
but
excluding communication that is conspicuously marked or
otherwise
designated in writing by the copyright owner as "Not a
Contribution."

"Contributor" shall mean Licensor and any individual or Legal
Entity
on behalf of whom a Contribution has been received by Licensor
and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions
of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute
the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have
made,
use, offer to sell, sell, import, and otherwise transfer the
Work,
where such license applies only to those patent claims
licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If
You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes
direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or

Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the

Work

by You to the Licensor shall be under the terms and conditions

of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or

modify

the terms of any separate license agreement you may have
executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the
trade

names, trademarks, service marks, or product names of the
Licensor,

except as required for reasonable and customary use in
describing the

origin of the Work and reproducing the content of the NOTICE
file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or
conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining
the

appropriateness of using or redistributing the Work and assume
any

risks associated with Your exercise of permissions under this
License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and

grossly
negligent acts) or agreed to in writing, shall any Contributor
be

liable to You for damages, including any direct, indirect,
special,

incidental, or consequential damages of any character arising as
a

result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty,

indemnity,

or other liability obligations and/or rights consistent with
this

License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes

of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,
use, offer to sell, sell, import, and otherwise transfer the
Work,
where such license applies only to those patent claims
licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If
You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes
direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

- (a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute
must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file
distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;
or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The
contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution

notices within Derivative Works that You distribute,
alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications
and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies
with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or

otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,

use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims

licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have

executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the

Licensors for the purpose of discussing and improving the Work,
but
excluding communication that is conspicuously marked or
otherwise
designated in writing by the copyright owner as "Not a
Contribution."

"Contributor" shall mean Licensor and any individual or Legal
Entity
on behalf of whom a Contribution has been received by Licensor
and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions
of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute
the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have
made,
use, offer to sell, sell, import, and otherwise transfer the
Work,
where such license applies only to those patent claims
licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If
You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes
direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act

only
on Your own behalf and on Your sole responsibility, not on
behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by
reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License");
you may not use this file except in compliance with the License.
You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software
distributed under the License is distributed on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied.

See the License for the specific language governing permissions and
limitations under the License.

argparse@1.0.10
<https://github.com/nodeca/argparse>
<https://raw.githubusercontent.com/nodeca/argparse/master/LICENSE>

A. HISTORY OF THE SOFTWARE

=====

Python was created in the early 1990s by Guido van Rossum at Stichting

Mathematisch Centrum (CWI, see <http://www.cwi.nl>) in the Netherlands as a successor of a language called ABC. Guido remains Python's principal author, although it includes many contributions from others.

In 1995, Guido continued his work on Python at the Corporation for National Research Initiatives (CNRI, see <http://www.cnri.reston.va.us>) in Reston, Virginia where he released several versions of the software.

In May 2000, Guido and the Python core development team moved to BeOpen.com to form the BeOpen PythonLabs team. In October of the same year, the PythonLabs team moved to Digital Creations, which became Zope Corporation. In 2001, the Python Software Foundation (PSF, see <https://www.python.org/psf/>) was formed, a non-profit organization created specifically to own Python-related Intellectual Property. Zope Corporation was a sponsoring member of the PSF.

All Python releases are Open Source (see <http://www.opensource.org> for the Open Source Definition). Historically, most, but not all, Python releases have also been GPL-compatible; the table below summarizes the various releases.

| Release | Derived from | Year | Owner | GPL-compatible? |
|----------------|--------------|-----------|------------|-----------------|
| (1) | | | | |
| 0.9.0 thru 1.2 | | 1991-1995 | CWI | yes |
| 1.3 thru 1.5.2 | 1.2 | 1995-1999 | CNRI | yes |
| 1.6 | 1.5.2 | 2000 | CNRI | no |
| 2.0 | 1.6 | 2000 | BeOpen.com | no |
| 1.6.1 | 1.6 | 2001 | CNRI | yes (2) |
| 2.1 | 2.0+1.6.1 | 2001 | PSF | no |
| 2.0.1 | 2.0+1.6.1 | 2001 | PSF | yes |
| 2.1.1 | 2.1+2.0.1 | 2001 | PSF | yes |
| 2.1.2 | 2.1.1 | 2002 | PSF | yes |
| 2.1.3 | 2.1.2 | 2002 | PSF | yes |
| 2.2 and above | 2.1.1 | 2001-now | PSF | yes |

Footnotes:

- (1) GPL-compatible doesn't mean that we're distributing Python under the GPL. All Python licenses, unlike the GPL, let you distribute a modified version without making your changes open source. The GPL-compatible licenses make it possible to combine Python with other software that is released under the GPL; the others don't.
- (2) According to Richard Stallman, 1.6.1 is not GPL-compatible, because its license has a choice of law clause. According to CNRI, however, Stallman's lawyer has told CNRI's lawyer that 1.6.1 is "not incompatible" with the GPL.

Thanks to the many outside volunteers who have worked under Guido's direction to make these releases possible.

B. TERMS AND CONDITIONS FOR ACCESSING OR OTHERWISE USING PYTHON

PYTHON SOFTWARE FOUNDATION LICENSE VERSION 2

1. This LICENSE AGREEMENT is between the Python Software Foundation ("PSF"), and the Individual or Organization ("Licensee") accessing and otherwise using this software ("Python") in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, PSF hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python alone or in any derivative version, provided, however, that PSF's License Agreement and PSF's notice of copyright, i.e., "Copyright (c) 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020 Python Software Foundation; All Rights Reserved" are retained in Python alone or in any derivative version prepared by Licensee.

3. In the event Licensee prepares a derivative work that is based on or incorporates Python or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python.

4. PSF is making Python available to Licensee on an "AS IS" basis. PSF MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, PSF MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. PSF SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON,

OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between PSF and Licensee. This License Agreement does not grant permission to use PSF trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By copying, installing or otherwise using Python, Licensee agrees to be bound by the terms and conditions of this License Agreement.

BEOPEN.COM LICENSE AGREEMENT FOR PYTHON 2.0

BEOPEN PYTHON OPEN SOURCE LICENSE AGREEMENT VERSION 1

1. This LICENSE AGREEMENT is between BeOpen.com ("BeOpen"), having an office at 160 Saratoga Avenue, Santa Clara, CA 95051, and the Individual or Organization ("Licensee") accessing and otherwise using this software in source or binary form and its associated documentation ("the Software").

2. Subject to the terms and conditions of this BeOpen Python License Agreement, BeOpen hereby grants Licensee a non-exclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use the Software alone or in any derivative version, provided, however, that the BeOpen Python License is retained in the Software, alone or in any derivative version prepared by Licensee.

3. BeOpen is making the Software available to Licensee on an "AS IS" basis. BEOPEN MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, BEOPEN MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF THE SOFTWARE WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

4. BEOPEN SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF THE SOFTWARE FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF USING, MODIFYING OR DISTRIBUTING THE SOFTWARE, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

5. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

6. This License Agreement shall be governed by and interpreted in all respects by the law of the State of California, excluding conflict of law provisions. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between BeOpen and Licensee. This License Agreement does not grant permission to use BeOpen trademarks or trade names in a trademark sense to endorse or promote products or services of Licensee, or any third party. As an exception, the "BeOpen Python" logos available at <http://www.pythonlabs.com/logos.html> may be used according to the permissions granted on that web page.

7. By copying, installing or otherwise using the software, Licensee agrees to be bound by the terms and conditions of this License Agreement.

CNRI LICENSE AGREEMENT FOR PYTHON 1.6.1

1. This LICENSE AGREEMENT is between the Corporation for National Research Initiatives, having an office at 1895 Preston White Drive, Reston, VA 20191 ("CNRI"), and the Individual or Organization ("Licensee") accessing and otherwise using Python 1.6.1 software in source or binary form and its associated documentation.

2. Subject to the terms and conditions of this License Agreement, CNRI hereby grants Licensee a nonexclusive, royalty-free, world-wide license to reproduce, analyze, test, perform and/or display publicly, prepare derivative works, distribute, and otherwise use Python 1.6.1 alone or in any derivative version, provided, however, that CNRI's License Agreement and CNRI's notice of copyright, i.e., "Copyright (c) 1995-2001 Corporation for National Research Initiatives; All Rights Reserved" are retained in Python 1.6.1 alone or in any derivative version prepared by Licensee. Alternately, in lieu of CNRI's License Agreement, Licensee may substitute the following text (omitting the quotes): "Python 1.6.1 is made available subject to the terms and conditions in CNRI's License Agreement. This Agreement together with Python 1.6.1 may be located on the Internet using the following unique, persistent identifier (known as a handle): 1895.22/1013. This Agreement may also be obtained from a proxy server on the Internet using the following URL: <http://hdl.handle.net/1895.22/1013>".

3. In the event Licensee prepares a derivative work that is based on or incorporates Python 1.6.1 or any part thereof, and wants to make the derivative work available to others as provided herein, then Licensee hereby agrees to include in any such work a brief summary of the changes made to Python 1.6.1.

4. CNRI is making Python 1.6.1 available to Licensee on an "AS IS" basis. CNRI MAKES NO REPRESENTATIONS OR WARRANTIES, EXPRESS OR

IMPLIED. BY WAY OF EXAMPLE, BUT NOT LIMITATION, CNRI MAKES NO AND DISCLAIMS ANY REPRESENTATION OR WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OR THAT THE USE OF PYTHON 1.6.1 WILL NOT INFRINGE ANY THIRD PARTY RIGHTS.

5. CNRI SHALL NOT BE LIABLE TO LICENSEE OR ANY OTHER USERS OF PYTHON 1.6.1 FOR ANY INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES OR LOSS AS A RESULT OF MODIFYING, DISTRIBUTING, OR OTHERWISE USING PYTHON 1.6.1, OR ANY DERIVATIVE THEREOF, EVEN IF ADVISED OF THE POSSIBILITY THEREOF.

6. This License Agreement will automatically terminate upon a material breach of its terms and conditions.

7. This License Agreement shall be governed by the federal intellectual property law of the United States, including without limitation the federal copyright law, and, to the extent such U.S. federal law does not apply, by the law of the Commonwealth of Virginia, excluding Virginia's conflict of law provisions. Notwithstanding the foregoing, with regard to derivative works based on Python 1.6.1 that incorporate non-separable material that was previously distributed under the GNU General Public License (GPL), the law of the Commonwealth of Virginia shall govern this License Agreement only as to issues arising under or with respect to Paragraphs 4, 5, and 7 of this License Agreement. Nothing in this License Agreement shall be deemed to create any relationship of agency, partnership, or joint venture between CNRI and Licensee. This License Agreement does not grant permission to use CNRI trademarks or trade name in a trademark sense to endorse or promote products or services of Licensee, or any third party.

8. By clicking on the "ACCEPT" button where indicated, or by copying, installing or otherwise using Python 1.6.1, Licensee agrees to be bound by the terms and conditions of this License Agreement.

ACCEPT

aws-sign2@0.7.0
<https://github.com/mikeal/aws-sign>
<https://raw.githubusercontent.com/request/aws-sign/master/LICENSE>

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an

individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices

from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent

acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

bser@2.1.1
<https://github.com/facebook/watchman>
<https://raw.githubusercontent.com/facebook/watchman/master/LICENSE>

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use,
reproduction,
and distribution as defined by Sections 1 through 9 of this
document.

"Licensor" shall mean the copyright owner or entity authorized
by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under
common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of
the
outstanding shares, or (iii) beneficial ownership of such
entity.

"You" (or "Your") shall mean an individual or Legal Entity

exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work,

but

excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made,

use, offer to sell, sell, import, and otherwise transfer the Work,

where such license applies only to those patent claims licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have

executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only

on Your own behalf and on Your sole responsibility, not on
behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by
reason
of your accepting any such warranty or additional liability.

<https://raw.githubusercontent.com/request/caseless/master/LICENSE>

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>
TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual,

worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise

complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

LICENSE

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by

the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright

owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent

to the Licensor or its representatives, including but not limited to

communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have

made,

use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims licensable

by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work

or a Contribution incorporated within the Work constitutes
direct

or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

- (a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications
and

may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,

reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.

See the License for the specific language governing permissions and limitations under the License.

fb-watchman@2.0.1
<https://github.com/facebook/watchman>
<https://raw.githubusercontent.com/facebook/watchman/master/LICENSE>

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the

Work,

where such license applies only to those patent claims
licensable

by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If

You

institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes

direct

or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

- (a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,

whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and
grossly negligent acts) or agreed to in writing, shall any Contributor
be liable to You for damages, including any direct, indirect,
special, incidental, or consequential damages of any character arising as
a result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty,
indemnity, or other liability obligations and/or rights consistent with
this License. However, in accepting such obligations, You may act
only on Your own behalf and on Your sole responsibility, not on
behalf of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by
reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the
copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other
entities that control, are controlled by, or are under common control
with that entity. For the purposes of this definition, "control" means
(i) the power, direct or indirect, to cause the direction or
management of such entity, whether by contract or otherwise, or (ii)
ownership of fifty percent (50%) or more of the outstanding shares, or
(iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising
permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation

source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where

such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by

You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

%%%%%%%%%

growly@1.3.0
<https://github.com/theabraham/growly>
<https://raw.githubusercontent.com/theabraham/growly/master/README.md>

Growly

Simple zero-dependency Growl notifications using Gntp.

Installation

Install growly using `npm`:

```

`npm install growly`

```

And then require it:

```
```javascript
var growly = require('growly');
```
```

This module uses the Growl Network Transport Protocol (GNTP) which was implemented in Growl since version 1.3, so you **must** have an appropriate version of Growl installed for Growly to work.

Example

Sending a minimal Growl notification:

```
```javascript
var growly = require('growly');

growly.notify('This is as easy as it gets', { title: 'Hello,
World!' });
```
```

More examples can be found in the `*example/*` directory.

Usage

The growly module exposes only three methods: `Growly.register()`, `Growly.notify()`, and `Growly.setHost()`.

`Growly.register(appname, [appicon], [notifications], [callback])`

Registers a new application with Growl. Registration is completely optional since it will be performed automatically for you with sensible defaults. Useful if you want your application, with its own icon and types of notifications, to show up in Growl's preference panel.

- `appname` the name of the application (required.)
- `appicon` url, file path, or Buffer instance for an application icon image.
- `notifications` a list of defined notification types with the following properties:
 - `.label` name used to identify the type of notification being used (required.)
 - `.dispname` name users will see in Growl's preference panel (defaults to `.label`.)
 - `.enabled` whether or not notifications of this type are enabled (defaults to `true`.)
- `callback` called when the registration completes; if registration fails, the first argument will be an Error object.

An example:

```
```javascript
growly.register('My Application', 'path/to/icon.png', [
 { label: 'success', dispname: 'Success' },
 { label: 'warning', dispname: 'Warning', enabled: false }
], function(err) {
 console.log(err || 'Registration successful!');
});
```
```

Growly.notify(text, [opts], [callback])

Sends a Growl notification. If an application wasn't registered beforehand with `growly.register()`, a default application will automatically be registered before sending the notification.

- `text` the body of the notification.
- `opts` an object with the following properties:
 - `.title` title of the notification.
 - `.icon` url, file path, or Buffer instance for the notification's icon.
 - `.sticky` whether or not to sticky the notification (defaults to false.)
 - `.label` type of notification to use (defaults to the first registered notification type.)
 - `.priority` the priority of the notification from lowest (-2) to highest (2).
 - `.coalescingId` replace/update the matching previous notification. May be ignored.
 - `callback` called when the user has closed/clicked the notification. The callback is passed an Error object `err` as the first argument when the notification fails; otherwise, the second argument `action` is a string that'll describe which action has been taken by the user (either 'closed' or 'clicked'.)

An example:

```
```javascript
/* Assuming an application was registered with a notification type
labeled 'warning'. */
growly.notify('Stuffs broken!', { label: 'warning' }, function(err,
action) {
 console.log('Action:', action);
});
```
```

Growly.setHost(host, port)

Set the host and port that Growl (GNTP) requests will be sent to. Using this method is optional since GNTP defaults to using host

'localhost' and port 23053.

human-signals@1.1.1
<https://github.com/ehmicky/human-signals>
<https://raw.githubusercontent.com/ehmicky/human-signals/main/LICENSE>

Apache License
Version 2.0, January 2004
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation,

and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its

distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE

file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining

the

appropriateness of using or redistributing the Work and assume

any

risks associated with Your exercise of permissions under this

License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and

grossly

negligent acts) or agreed to in writing, shall any Contributor

be

liable to You for damages, including any direct, indirect,

special,

incidental, or consequential damages of any character arising as

a

result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty,

indemnity,

or other liability obligations and/or rights consistent with

this

License. However, in accepting such obligations, You may act

only

on Your own behalf and on Your sole responsibility, not on

behalf

of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by

reason

of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

```
jest-pnp-resolver@1.2.1
https://github.com/arcanis/jest-pnp-resolver
https://raw.githubusercontent.com/arcanis/jest-pnp-resolver/master/
README.md
```

```
#  [Plug'n'Play]
(https://github.com/yarnpkg/rfcs/pull/101) resolver for Jest
```

```
[![npm version](https://img.shields.io/npm/v/jest-pnp-resolver.svg)]
(https://www.npmjs.com/package/jest-pnp-resolver)
[![node version](https://img.shields.io/node/v/jest-pnp-resolver.svg)]
(https://www.npmjs.com/package/jest-pnp-resolver)
```

```
*This plugin is also available for Rollup ([rollup-plugin-pnp-resolve]
(https://github.com/arcanis/rollup-plugin-pnp-resolve)), TypeScript
([ts-pnp](https://github.com/arcanis/ts-pnp)), and Webpack ([pnp-
webpack-plugin](https://github.com/arcanis/pnp-webpack-plugin))*
```

Installation

```
```\n
```

```
yarn add -D jest-pnp-resolver\n```\n
```

## ## Usage

As of `jest@^24.4.0` you don't need to manually add this package anymore. The default resolver will already use PnP.

Simply add the resolver to your configuration. For example, a minimal `jest.config.js` would be as such:

```
```js
module.exports = {
  resolver: require.resolve('jest-pnp-resolver')
};\n```\n
```

Dojo is available under *either* the terms of the BSD 3-Clause "New" License *or* the Academic Free License version 2.1. As a recipient of Dojo, you may choose which

license to receive this code under (except as noted in per-module LICENSE files). Some modules may not be the copyright of the Dojo Foundation. These modules contain explicit declarations of copyright in both the LICENSE files in the directories in which they reside and in the code itself. No external contributions are allowed under licenses which are fundamentally incompatible with the AFL-2.1 OR and BSD-3-Clause licenses that Dojo is distributed under.

The text of the AFL-2.1 and BSD-3-Clause licenses is reproduced below.

BSD 3-Clause "New" License:

Copyright (c) 2005-2015, The Dojo Foundation
All rights reserved.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

- * Redistributions of source code must retain the above copyright notice, this list of conditions and the following disclaimer.
- * Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.
- * Neither the name of the Dojo Foundation nor the names of its contributors may be used to endorse or promote products derived from this software without specific prior written permission.

THIS SOFTWARE IS PROVIDED BY THE COPYRIGHT HOLDERS AND CONTRIBUTORS "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE COPYRIGHT OWNER OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL

DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The Academic Free License, v. 2.1:

This Academic Free License (the "License") applies to any original work of authorship (the "Original Work") whose owner (the "Licensor") has placed the following notice immediately following the copyright notice for the Original Work:

Licensed under the Academic Free License version 2.1

1) Grant of Copyright License. Licensor hereby grants You a world-wide, royalty-free, non-exclusive, perpetual, sublicenseable license to do the following:

a) to reproduce the Original Work in copies;

b) to prepare derivative works ("Derivative Works") based upon the Original Work;

c) to distribute copies of the Original Work and Derivative Works to the public;

d) to perform the Original Work publicly; and

e) to display the Original Work publicly.

2) Grant of Patent License. Licensor hereby grants You a world-wide, royalty-free, non-exclusive, perpetual, sublicenseable license, under patent claims owned or controlled by the Licensor that are embodied in the Original

Work as furnished by the Licensor, to make, use, sell and offer for sale the Original Work and Derivative Works.

3) Grant of Source Code License. The term "Source Code" means the preferred form of the Original Work for making modifications to it and all available documentation describing how to modify the Original Work. Licensor hereby agrees to provide a machine-readable copy of the Source Code of the Original Work along with each copy of the Original Work that Licensor distributes. Licensor reserves the right to satisfy this obligation by placing a machine-readable copy of the Source Code in an information repository reasonably calculated to permit inexpensive and convenient access by You for as long as Licensor continues to distribute the Original Work, and by publishing the address of that information repository in a notice immediately following the copyright notice that applies to the Original Work.

4) Exclusions From License Grant. Neither the names of Licensor, nor the names of any contributors to the Original Work, nor any of their trademarks or service marks, may be used to endorse or promote products derived from this Original Work without express prior written permission of the Licensor. Nothing in this License shall be deemed to grant any rights to trademarks, copyrights, patents, trade secrets or any other intellectual property of Licensor except as expressly stated herein. No patent license is granted to make, use, sell or offer to sell embodiments of any patent claims other than the licensed claims defined in Section 2. No right is granted to the trademarks of Licensor even if such marks are included in the Original Work. Nothing in this License shall be interpreted to prohibit Licensor from licensing under different terms from this License any Original Work that Licensor otherwise would have a right to license.

5) This section intentionally omitted.

6) Attribution Rights. You must retain, in the Source Code of any
Derivative
Works that You create, all copyright, patent or trademark notices from
the
Source Code of the Original Work, as well as any notices of licensing
and any
descriptive text identified therein as an "Attribution Notice." You
must cause
the Source Code for any Derivative Works that You create to carry a
prominent
Attribution Notice reasonably calculated to inform recipients that You
have
modified the Original Work.

7) Warranty of Provenance and Disclaimer of Warranty. Licensor
warrants that
the copyright in and to the Original Work and the patent rights
granted herein
by Licensor are owned by the Licensor or are sublicensed to You under
the terms
of this License with the permission of the contributor(s) of those
copyrights
and patent rights. Except as expressly stated in the immediately
proceeding
sentence, the Original Work is provided under this License on an "AS
IS" BASIS
and WITHOUT WARRANTY, either express or implied, including, without
limitation,
the warranties of NON-INFRINGEMENT, MERCHANTABILITY or FITNESS FOR A
PARTICULAR
PURPOSE. THE ENTIRE RISK AS TO THE QUALITY OF THE ORIGINAL WORK IS
WITH YOU.
This DISCLAIMER OF WARRANTY constitutes an essential part of this
License. No
license to Original Work is granted hereunder except under this
disclaimer.

8) Limitation of Liability. Under no circumstances and under no legal
theory,
whether in tort (including negligence), contract, or otherwise, shall
the
Licensor be liable to any person for any direct, indirect, special,
incidental,
or consequential damages of any character arising as a result of this
License
or the use of the Original Work including, without limitation, damages
for loss
of goodwill, work stoppage, computer failure or malfunction, or any

and all other commercial damages or losses. This limitation of liability shall not apply to liability for death or personal injury resulting from Licensors negligence to the extent applicable law prohibits such limitation. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so this exclusion and limitation may not apply to You.

9) Acceptance and Termination. If You distribute copies of the Original Work or a Derivative Work, You must make a reasonable effort under the circumstances to obtain the express assent of recipients to the terms of this License. Nothing else but this License (or another written agreement between Licensor and You) grants You permission to create Derivative Works based upon the Original Work or to exercise any of the rights granted in Section 1 herein, and any attempt to do so except under the terms of this License (or another written agreement between Licensor and You) is expressly prohibited by U.S. copyright law, the equivalent laws of other countries, and by international treaty. Therefore, by exercising any of the rights granted to You in Section 1 herein, You indicate Your acceptance of this License and all of its terms and conditions.

10) Termination for Patent Action. This License shall terminate automatically and You may no longer exercise any of the rights granted to You by this License as of the date You commence an action, including a cross-claim or counterclaim, against Licensor or any licensee alleging that the Original Work infringes a patent. This termination provision shall not apply for an action alleging patent infringement by combinations of the Original Work with other software or hardware.

11) Jurisdiction, Venue and Governing Law. Any action or suit relating to this

License may be brought only in the courts of a jurisdiction wherein the Licenser resides or in which Licenser conducts its primary business, and under the laws of that jurisdiction excluding its conflict-of-law provisions. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any use of the Original Work outside the scope of this License or after its termination shall be subject to the requirements and penalties of the U.S. Copyright Act, 17 U.S.C. Â§ 101 et seq., the equivalent laws of other countries, and international treaty. This section shall survive the termination of this License.

12) Attorneys Fees. In any action to enforce the terms of this License or seeking damages relating thereto, the prevailing party shall be entitled to recover its costs and expenses, including, without limitation, reasonable attorneys' fees and costs incurred in connection with such action, including any appeal of such action. This section shall survive the termination of this License.

13) Miscellaneous. This License represents the complete agreement concerning the subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

14) Definition of "You" in This License. "You" throughout this License, whether in upper or lower case, means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, "You" includes any entity that controls, is controlled by, or is under common control with you. For purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent

(50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

15) Right to Use. You may use the Original Work in all ways not otherwise restricted or conditioned by this License or by law, and Licensor promises not to interfere with or be responsible for such uses by You.

oauth-sign@0.9.0

<https://github.com/mikeal/oauth-sign>

<https://raw.githubusercontent.com/request/oauth-sign/master/LICENSE>

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use,

offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

pn@1.1.0
<https://github.com/cscott/node-pn>
<https://raw.githubusercontent.com/cscott/node-pn/master/README.md>

```
# pn
[![NPM] [NPM1]] [NPM2]

[![Build Status] [1]] [2]
```

The `pn` library gives you the Promise-using node standard library you've always dreamed of. Think "Promised Node" when saying it.

Just about every node standard library method that takes a callback will now return a `Promise` iff no callback is supplied. But existing code that passes callbacks will still work fine --- and fast: No unnecessary `Promise`s are created if you supply a callback.

The wrappers are generated automatically by a script, with a table to handle exceptions and odd cases. See below for more details.

Installation

\\\

```
npm install pn
```

\\\

Usage

\\\

```
var fs = require('pn/fs');
fs.writeFile('foo', 'bar', 'utf-8').then(function()
{ console.log('done'); });
// But you can use callbacks, too -- existing code won't break.
fs.writeFile('foo', 'bat', 'utf-8', function(err)
{ console.log('yay'); });
\\\
```

This library uses node native promises (ie ``global.Promise``) by default, and thus works with node `>= 0.11`.

You can use `[`core-js`]`(<https://www.npmjs.org/package/core-js>) or `[`es6-shim`]`(<https://www.npmjs.org/package/es6-shim>) to add ES6 Promises to earlier versions of node, for example:

\\\

```
require('es6-shim');
var fs = require('pn/fs');
```

\\\

Just be sure that ``es6-shim`` is loaded before the ``pn`` package in that case.

You might also want to look into packages like `[`prfun`]`(<https://www.npmjs.org/package/prfun>) which add some helpers to make working with native promises much more fun.

In particular, the ``Promise#done`` method is very useful when debugging, at least until v8's native Promise debugging capabilities are completed.

Custom Promise types

You can also specify a custom ``Promise`` type to use, as follows:

\\\

```
var MyPromise = require('prfun'); // Use prfun's Promises, for
example.
require('pn/_promise')(MyPromise); // This only needs to be done once.
\\\
```

Exceptions and odd cases

The wrappers are automatically generated by ``scripts/generate.js``; there is a table in that file which specifies all the odd cases.

In general: if the node API has a callback which takes multiple value arguments, the ``Promise`` returned will be an object with named fields corresponding to the different values. If the node API takes a callback *and* returns a value, ``pn`` will return the original value with a nonenumerable field named ``promise`` corresponding to the callback. Combining these two cases:

```
var child_process = require('pn/child_process');
var cp = child_process.execFile('true');
console.log('pid', cp.pid);
cp.promise.then(function(result) {
  console.log('stdout: ', result.stdout);
  console.log('stderr: ', result.stderr);
});
```

- * ``child_process``: The ``exec`` and ``execFile`` methods promise a object with fields named ``stdout`` and ``stderr``. They return a ``ChildProcess`` object with a nonenumerable field named ``promise`` corresponding to the callback.
- * ``crypto``: The ``randomBytes`` and ``pseudoRandomBytes`` methods are now always asynchronous, returning a ``Promise`` if no callback is supplied. Use the new ``randomBytesSync`` and ``pseudoRandomBytesSync`` methods if you want synchronous computation. *This is backwards incompatible with existing node code.*
- * ``dns``: The ``lookupService`` method promises an object with fields named ``hostname`` and ``service``.
- * ``fs``: The ``exists`` method doesn't pass an error to its callback. The promised version will never reject. The ``write`` method promises an object with fields named ``written`` and ``data``. The ``read`` method promises an object with fields named ``read`` and ``data``.
- * ``http``, ``https``: The ``request`` and ``get`` methods return a ``ClientRequest`` object with a nonenumerable field named ``promise``, which will resolve to an ``IncomingMessage`` object.
- * ``process``: You can defer computation to the next tick with ``require('pn/process').nextTick().then(function(){...})``
- * ``tls``: The ``connect`` and ``createServer`` return objects with a nonenumerable field named ``promise``.

There are a few object methods which are not promisified by this package:

- * ``domain``: ``Domain#bind``, ``Domain#intercept``

```
* `http`,`https`: `ClientRequest#setTimeout`,  
  `IncomingMessage#setTimeout`,  
    `Server#setTimeout`, `ServerResponse#setTimeout`, `Server#listen`,  
    `Server#close`  
* `net`: `Server#listen`, `Server#close`, `Server#getConnections`,  
  `Socket#write`, `Socket#setTimeout`  
* `readline`: `Interface#question`  
* `stream`: `Writable#write`, `Writable#end`  
* `dgram`: `Socket#send`, `Socket#bind`.
```

Related packages

Here are some other packages with similar aims:

```
* [ `promised-node` ](https://www.npmjs.org/package/promised-node)  
* [ `then-fs` ](https://www.npmjs.org/package/then-fs)  
* [ `final-fs` ](https://www.npmjs.org/package/final-fs)
```

request@2.88.0
<https://github.com/request/request>
<https://raw.githubusercontent.com/request/request/master/LICENSE>

Apache License

Version 2.0, January 2004

<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work

or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed

to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

sane@4.1.0

<https://github.com/amasad/sane>

<https://raw.githubusercontent.com/amasad/sane/master/README.md>

[[Try on repl.it](<https://repl-badge.jajoosam.repl.co/try.png>)]
(<https://repl.it/@amasad/sane-playground>)

[[CircleCI](<https://circleci.com/gh/amasad/sane.svg?style=svg>)]
(<https://circleci.com/gh/amasad/sane>)

sane

I've been driven to insanity by node filesystem watcher wrappers. Sane aims to be fast, small, and reliable file system watcher. It does that by:

- * By default stays away from fs polling because it's very slow and cpu intensive
- * Uses `fs.watch` by default and sensibly works around the various issues
- * Maintains a consistent API across different platforms
- * Where `fs.watch` is not reliable you have the choice of using the following alternatives:
 - * [the facebook watchman library](https://facebook.github.io/watchman/)
 - * [the watchexec library](https://github.com/watchexec/watchexec)
 - * polling

Install

```

```
$ npm install sane
```

```

How to choose a mode

Don't worry too much about choosing the correct mode upfront because sane maintains the same API across all modes and will be easy to switch.

- * If you're only supporting Linux and OS X, `watchman` would be the most reliable mode
- * If you're using node > v0.10.0 use the default mode
- * If you're running OS X and you're watching a lot of directories and you're running into <https://github.com/joyent/node/issues/5463>, use `watchman`
- * If you're in an environment where native file system events aren't available (like Vagrant), you should use polling
- * Otherwise, the default mode should work well for you

API

sane(dir, options)

Watches a directory and all its descendant directories for changes, deletions, and additions on files and directories.

```
```js
```

```
var watcher = sane('path/to/dir', {glob: ['**/*.js', '**/*.css']});
watcher.on('ready', function () { console.log('ready') });
watcher.on('change', function (filepath, root, stat)
{ console.log('file changed', filepath); });
```

```

watcher.on('add', function (filepath, root, stat) { console.log('file
added', filepath); });
watcher.on('delete', function (filepath, root) { console.log('file
deleted', filepath); });
// close
watcher.close();
```

```

options:

- * ``glob``: a single string glob pattern or an array of them.
- * ``poll``: puts the watcher in polling mode. Under the hood that means ``fs.watchFile``.
- * ``watchman``: makes the watcher use [watchman](https://facebook.github.io/watchman/).
- * ``watchmanPath``: sets a custom path for ``watchman`` binary.
- * ``watchexec``: makes the watcher use [watchexec](https://github.com/watchexec/watchexec).
- * ``dot``: enables watching files/directories that start with a dot.
- * ``ignored``: a glob, regex, function, or array of any combination.

For the glob pattern documentation, see [micromatch](https://github.com/micromatch/micromatch).

If you choose to use ``watchman`` you'll have to [install watchman yourself](https://facebook.github.io/watchman/docs/install.html).

If you choose to use ``watchexec`` you'll have to [install watchexec yourself](https://github.com/watchexec/watchexec).

For the ignored options, see [anymatch](https://github.com/es128/anymatch).

sane.NodeWatcher(dir, options)

The default watcher class. Uses ``fs.watch`` under the hood, and takes the same options as ``sane(dir, options)``.

sane.WatchmanWatcher(dir, options)

The watchman watcher class. Takes the same options as ``sane(dir, options)``.

sane.Watchexec(dir, options)

The watchexec watcher class. Takes the same options as ``sane(dir, options)``.

sane.PollWatcher(dir, options)

The polling watcher class. Takes the same options as ``sane(dir, options)`` with the addition of:

* interval: indicates how often the files should be polled. (passed to fs.watchFile)

sane.{Node|Watchman|Watchexec|Poll}Watcher#close

Stops watching.

sane.{Node|Watchman|Watchexec|Poll}Watcher events

Emits the following events:

All events are passed the file/dir path relative to the root directory

* `ready` when the program is ready to detect events in the directory

* `change` when a file changes

* `add` when a file or directory has been added

* `delete` when a file or directory has been deleted

CLI

This module includes a simple command line interface, which you can install with `npm install sane -g`.

...

Usage: sane <command> [...directory] [--glob=<filePattern>] [--poll] [--watchman] [--watchman-path=<watchmanBinaryPath>] [--dot] [--wait=<seconds>]

OPTIONS:

--glob=<filePattern>

A single string glob pattern or an array of them.

--ignored=<filePattern>

A glob, regex, function, or array of any combination.

--poll, -p

Use polling mode.

--watchman, -w

Use watchman (if available).

--watchman-path=<watchmanBinaryPath>

Sets a custom path for watchman binary (if using this mode).

--dot, -d

Enables watching files/directories that start with a dot.

--wait=<seconds>

Duration, in seconds, that watching will be disabled after running <command>. Setting this option will throttle calls to <command> for the specified duration.

```
--quiet, -q
  Disables sane's console output

--changes-only, -o
  Runs <command> only when a change occur. Skips running <command>
at startup
````
```

It will watch the given `directory` and run the given <command> every time a file changes.

```
CLI example usage
- `sane 'echo "A command ran"'`
- `sane 'echo "A command ran"' --glob='**/*.css'`
- `sane 'echo "A command ran"' site/assets/css --glob='**/*.css'`
- `sane 'echo "A command ran"' --glob='**/*.css' --ignored='**/
ignore.css'`
- `sane 'echo "A command ran"' --wait=3`
- `sane 'echo "A command ran"' -p`
```

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the

purposes

of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent

to the Licensor or its representatives, including but not limited to

communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the

Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable

(except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and

do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this

License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License");

you may not use this file except in compliance with the License.  
You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.

See the License for the specific language governing permissions and limitations under the License.

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright

notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation

is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or

consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

<http://www.apache.org/licenses/>

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a

Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works

that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the

trade

names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability

incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

#### END OF TERMS AND CONDITIONS

#### APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright [yyyy] [name of copyright owner]

Licensed under the Apache License, Version 2.0 (the "License"); you may not use this file except in compliance with the License. You may obtain a copy of the License at

<http://www.apache.org/licenses/LICENSE-2.0>

Unless required by applicable law or agreed to in writing, software distributed under the License is distributed on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.

See the License for the specific language governing permissions and limitations under the License.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other

modifications

represent, as a whole, an original work of authorship. For the purposes

of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition, "submitted"

means any form of electronic, verbal, or written communication sent

to the Licensor or its representatives, including but not limited to

communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the

Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise

designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity

on behalf of whom a Contribution has been received by Licensor and

subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute

the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume

any

risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

<h1>1 &ndash; Introduction</h1>

<p>

Lua is an extension programming language designed to support general procedural programming with data description facilities.

It also offers good support for object-oriented programming, functional programming, and data-driven programming.

Lua is intended to be used as a powerful, lightweight, embeddable scripting language for any program that needs one.

Lua is implemented as a library, written in *clean C*, the common subset of Standard C and C++.

<p>

Being an extension language, Lua has no notion of a "main" program: it only works *embedded* in a host client,

called the *embedding program* or simply the *host*.

The host program can invoke functions to execute a piece of Lua code, can write and read Lua variables,

and can register C-functions to be called by Lua code.

Through the use of C-functions, Lua can be augmented to cope with a wide range of different domains,

thus creating customized programming languages sharing a syntactical framework.

The Lua distribution includes a sample host program called `lua`, which uses the Lua library to offer a complete, standalone Lua interpreter, for interactive or batch use.

Lua is free software, and is provided as usual with no guarantees, as stated in its license. The implementation described in this manual is available at Lua's official web site, `www.lua.org`.

Like any other reference manual, this document is dry in places. For a discussion of the decisions behind the design of Lua, see the technical papers available at Lua's web site. For a detailed introduction to programming in Lua, see Roberto's book, *Programming in Lua*.

## 2 &ndash; [Basic Concepts](#)

This section describes the basic concepts of the language.

### 2.1 &ndash; [Values and Types](#)

Lua is a *dynamically typed language*. This means that variables do not have types; only values do. There are no type definitions in the language. All values carry their own type.

All values in Lua are *first-class values*. This means that all values can be stored in variables, passed as arguments to other functions, and returned as results.

There are eight basic types in Lua:

`nil`, `boolean`, `number`,  
`string`, `function`, `userdata`,  
`thread`, and `table`.  
`Nil` is the type of the value `nil`,  
whose main property is to be different from any other value;  
it usually represents the absence of a useful value.  
`Boolean` is the type of the values `false` and `true`.  
Both `nil` and `false` make a condition false;  
any other value makes it true.  
`Number` represents real (double-precision floating-point)  
numbers.  
Operations on numbers follow the same rules of  
the underlying C implementation,  
which, in turn, usually follows the IEEE 754 standard.  
(It is easy to build Lua interpreters that use other  
internal representations for numbers,  
such as single-precision floats or long integers;  
see file `luaconf.h`.)  
`String` represents immutable sequences of bytes.

Lua is 8-bit clean:  
strings can contain any 8-bit value,  
including embedded zeros (`\0`).

`<p>`  
Lua can call (and manipulate) functions written in Lua and  
functions written in C  
(see [§3.4.9](#3.4.9)).

`<p>`  
The type `userdata` is provided to allow arbitrary C data  
to  
be stored in Lua variables.  
A userdata value is a pointer to a block of raw memory.  
There are two kinds of userdata:  
full userdata, where the block of memory is managed by Lua,  
and light userdata, where the block of memory is managed by the host.  
Userdata has no predefined operations in Lua,  
except assignment and identity test.  
By using `metatables`,  
the programmer can define operations for full userdata values  
(see [§2.4](#2.4)).  
Userdata values cannot be created or modified in Lua,  
only through the C API.  
This guarantees the integrity of data owned by the host program.

<p>

The type `thread` represents independent threads of execution and it is used to implement coroutines (see [§2.6](#2.6)).

Do not confuse Lua threads with operating-system threads.

Lua supports coroutines on all systems, even those that do not support threads.

<p>

The type `table` implements associative arrays, that is, arrays that can be indexed not only with numbers, but with any Lua value except `nil` and NaN (`Not a Number`, a special numeric value used to represent undefined or unrepresentable results, such as `0/0`). Tables can be `heterogeneous`; that is, they can contain values of all types (except `nil`). Any key with value `nil` is not considered part of the table. Conversely, any key that is not part of a table has an associated value `nil`.

<p>

Tables are the sole data structuring mechanism in Lua; they can be used to represent ordinary arrays, sequences, symbol tables, sets, records, graphs, trees, etc. To represent records, Lua uses the field name as an index. The language supports this representation by providing `a.name` as syntactic sugar for `a["name"]`.

There are several convenient ways to create tables in Lua (see [§3.4.8](#3.4.8)).

<p>

We use the term `sequence` to denote a table where the set of all positive numeric keys is equal to `{1..n}` for some integer `n`, which is called the length of the sequence (see [§3.4.6](#3.4.6)).

<p>

Like indices, the values of table fields can be of any type.

In particular, because functions are first-class values, table fields can contain functions.

Thus tables can also carry `methods` (see [§3.4.10](#3.4.10)).

<p>

The indexing of tables follows the definition of raw equality in the language. The expressions `a[i]` and `a[j]` denote the same table element if and only if `i` and `j` are raw equal (that is, equal without metamethods).

<p>

Tables, functions, threads, and (full) userdata values are *objects*: variables do not actually *contain* these values, only *references* to them. Assignment, parameter passing, and function returns always manipulate references to such values; these operations do not imply any kind of copy.

<p>

The library function [`type`](#pdf-type) returns a string describing the type of a given value (see [§6.1](#6.1)).

## 2.2 &ndash; [Environments and the Global Environment](#)

<p>

As will be discussed in [§3.2](#3.2) and [§3.3.3](#3.3.3), any reference to a global name `var` is syntactically translated to `_ENV.var`. Moreover, every chunk is compiled in the scope of an external local variable called `_ENV` (see [§3.3.2](#3.3.2)), so `_ENV` itself is never a global name in a chunk.

<p>

Despite the existence of this external `_ENV` variable and the translation of global names, `_ENV` is a completely regular name. In particular,

you can define new variables and parameters with that name. Each reference to a global name uses the `_ENV` that is visible at that point in the program, following the usual visibility rules of Lua (see [§3.5](#3.5)).

<p>

Any table used as the value of `_ENV` is called an *environment*.

<p>

Lua keeps a distinguished environment called the *global environment*.

This value is kept at a special index in the C registry (see [§4.5](#4.5)).

In Lua, the variable `_G` is initialized with this same value.

<p>

When Lua compiles a chunk, it initializes the value of its `_ENV` upvalue with the global environment (see [`load`](#pdf-load)).

Therefore, by default, global variables in Lua code refer to entries in the global environment.

Moreover, all standard libraries are loaded in the global environment and several functions there operate on that environment.

You can use [`load`](#pdf-load) (or [`loadfile`](#pdf-loadfile)) to load a chunk with a different environment.

(In C, you have to load the chunk and then change the value of its first upvalue.)

<p>

If you change the global environment in the registry (through C code or the debug library), all chunks loaded after the change will get the new environment. Previously loaded chunks are not affected, however, as each has its own reference to the environment in its `_ENV` variable.

Moreover, the variable `_G` (which is stored in the original global environment) is never updated by Lua.

## 2.3 – [Error Handling](#)

Because Lua is an embedded extension language, all Lua actions start from C code in the host program calling a function from the Lua library (see [lua\\_pcall](#)). Whenever an error occurs during the compilation or execution of a Lua chunk, control returns to the host, which can take appropriate measures (such as printing an error message).

Lua code can explicitly generate an error by calling the [error](#) function. If you need to catch errors in Lua, you can use [pcall](#) or [xpcall](#) to call a given function in protected mode.

Whenever there is an error, an *error object* (also called an *error message*) is propagated with information about the error. Lua itself only generates errors where the error object is a string, but programs may generate errors with any value for the error object.

When you use [xpcall](#) or [lua\\_pcall](#), you may give a *message handler* to be called in case of errors. This function is called with the original error message and returns a new error message. It is called before the error unwinds the stack, so that it can gather more information about the error, for instance by inspecting the stack and creating a stack traceback. This message handler is still protected by the protected call; so, an error inside the message handler will call the message handler again. If this loop goes on, Lua breaks it and returns an appropriate message.

## 2.4 &ndash; [Metatables and Metamethods](#)

Every value in Lua can have a *metatable*.

This *metatable* is an ordinary Lua table that defines the behavior of the original value under certain special operations.

You can change several aspects of the behavior of operations over a value by setting specific fields in its metatable.

For instance, when a non-numeric value is the operand of an addition, Lua checks for a function in the field "`__add`" of the value's metatable.

If it finds one,

Lua calls this function to perform the addition.

The keys in a metatable are derived from the *event* names; the corresponding values are called *metamethods*.

In the previous example, the event is "`add`" and the metamethod is the function that performs the addition.

You can query the metatable of any value

using the ["`getmetatable`"](#) function.

You can replace the metatable of tables

using the ["`setmetatable`"](#) function.

You cannot change the metatable of other types from Lua (except by using the debug library); you must use the C API for that.

Tables and full userdata have individual metatables

(although multiple tables and userdata can share their metatables).

Values of all other types share one single metatable per type; that is, there is one single metatable for all numbers, one for all strings, etc.

By default, a value has no metatable, but the string library sets a metatable for the string type (see [§6.4](#6.4)).

<p>

A metatable controls how an object behaves in arithmetic operations, order comparisons, concatenation, length operation, and indexing.

A metatable also can define a function to be called

when a userdata or a table is garbage collected.

When Lua performs one of these operations over a value,

it checks whether this value has a metatable with the corresponding event.

If so, the value associated with that key (the metamethod)

controls how Lua will perform the operation.

<p>

Metatables control the operations listed next.

Each operation is identified by its corresponding name.

The key for each operation is a string with its name prefixed by two underscores, '`__`';

for instance, the key for operation "add" is the string "`__add`".

<p>

The semantics of these operations is better explained by a Lua function

describing how the interpreter executes the operation.

The code shown here in Lua is only illustrative;

the real behavior is hard coded in the interpreter

and it is much more efficient than this simulation.

All functions used in these descriptions

([<code>rawget</code>](#pdf-rawget), [<code>tonumber</code>](#pdf-tonumber), etc.)

are described in [§6.1](#6.1).

In particular, to retrieve the metamethod of a given object, we use the expression

<pre>

```
metatable(obj)[event]
```

</pre><p>

This should be read as

<pre>

```
rawget(getmetatable(obj) or {}, event)
```

</pre><p>

This means that the access to a metamethod does not invoke other metamethods,

and access to objects with no metatables does not fail (it simply results in **nil**).

<p>

For the unary `--` and `#` operators, the metamethod is called with a dummy second argument. This extra argument is only to simplify Lua's internals; it may be removed in future versions and therefore it is not present in the following code.  
(For most uses this extra argument is irrelevant.)

<ul>

<li>**"add":** `+` operation.

<p>

The function `getbinhandler` below defines how Lua chooses a handler for a binary operation. First, Lua tries the first operand. If its type does not define a handler for the operation, then Lua tries the second operand.

<pre>

```
function getbinhandler (op1, op2, event)
 return metatable(op1)[event] or metatable(op2)[event]
end
```

</pre><p>

By using this function, the behavior of the `op1 + op2` is

<pre>

```
function add_event (op1, op2)
 local o1, o2 = tonumber(op1), tonumber(op2)
 if o1 and o2 then -- both operands are numeric?
 return o1 + o2 -- '+' here is the primitive 'add'
 else -- at least one of the operands is not numeric
 local h = getbinhandler(op1, op2, "__add")
 if h then
 -- call the handler with both operands
 return (h(op1, op2))
 else -- no handler available: default behavior
 error(———)
 end
 end
end
```

```
 end
 end
</pre><p>

```

<li><b>"sub": </b>  
the <code>--</code> operation.

Behavior similar to the "add" operation.  
</li>

<li><b>"mul": </b>  
the <code>\*</code> operation.

Behavior similar to the "add" operation.  
</li>

<li><b>"div": </b>  
the <code>/</code> operation.

Behavior similar to the "add" operation.  
</li>

<li><b>"mod": </b>  
the <code>%</code> operation.

Behavior similar to the "add" operation,  
with the operation  
<code>o1 - floor(o1/o2)\*o2</code> as the primitive operation.  
</li>

<li><b>"pow": </b>  
the <code>^</code> (exponentiation) operation.

Behavior similar to the "add" operation,  
with the function <code>pow</code> (from the C&nbsp;math library)  
as the primitive operation.  
</li>

<li><b>"unm": </b>  
the unary <code>--</code> operation.

```
<pre>
function unm_event (op)
 local o = tonumber(op)
 if o then -- operand is numeric?
 return -o -- '-' here is the primitive 'unm'
 else -- the operand is not numeric.
 -- Try to get a handler from the operand
```

```

 local h = metatable(op).__unm
 if h then
 -- call the handler with the operand
 return (h(op))
 else -- no handler available: default behavior
 error(···)
 end
 end
end
end
</pre><p>

```

<li><b>"concat": </b>  
the <code>..</code> (concatenation) operation.

```

<pre>
function concat_event (op1, op2)
 if (type(op1) == "string" or type(op1) == "number") and
 (type(op2) == "string" or type(op2) == "number") then
 return op1 .. op2 -- primitive string concatenation
 else
 local h = getbinhandler(op1, op2, "__concat")
 if h then
 return (h(op1, op2))
 else
 error(···)
 end
 end
end
end
</pre><p>

```

<li><b>"len": </b>  
the <code>#</code> operation.

```

<pre>
function len_event (op)
 if type(op) == "string" then
 return strlen(op) -- primitive string length
 else
 local h = metatable(op).__len
 if h then
 return (h(op)) -- call handler with the operand
 elseif type(op) == "table" then
 return #op -- primitive table length
 else -- no handler available: error
 error(···)
 end
 end
end

```

```
 end
 end
</pre><p>
```

See [§3.4.6](#3.4.6) for a description of the length of a table.

</li>

<li><b>"eq": </b>  
the `==` operation.

The function `getequalhandler` defines how Lua chooses a metamethod

for equality.

A metamethod is selected only when both values being compared have the same type and the same metamethod for the selected operation, and the values are either tables or full userdata.

```
<pre>
function getequalhandler (op1, op2)
 if type(op1) ~= type(op2) or
 (type(op1) ~= "table" and type(op1) ~= "userdata") then
 return nil -- different values
 end
 local mm1 = metatable(op1).__eq
 local mm2 = metatable(op2).__eq
 if mm1 == mm2 then return mm1 else return nil end
end
</pre>
```

The "eq" event is defined as follows:

```
<pre>
function eq_event (op1, op2)
 if op1 == op2 then -- primitive equal?
 return true -- values are equal
 end
 -- try metamethod
 local h = getequalhandler(op1, op2)
 if h then
 return not not h(op1, op2)
 else
 return false
 end
end
</pre>
```

Note that the result is always a boolean.

<li><b>"lt": </b>  
the `<` operation.

<p>

As with the other comparison operators,  
the result is always a boolean.

</li>

<li><b>"index": </b>

The indexing access `table[key]`.

Note that the metamethod is tried only  
when `key` is not present in `table`.

(When `table` is not a table,  
no key is ever present,  
so the metamethod is always tried.)

<pre>

```
function gettable_event (table, key)
 local h
 if type(table) == "table" then
 local v = rawget(table, key)
 -- if key is present, return raw value
 if v ~= nil then return v end
 h = metatable(table).__index
 if h == nil then return nil end
 else
 h = metatable(table).__index
 if h == nil then
 error(———)
 end
 end
 if type(h) == "function" then
 return (h(table, key)) -- call the handler
 else return h[key] -- or repeat operation on it
 end
end
```

</pre><p>

</li>

<li><b>"newindex": </b>

The indexing assignment `table[key] = value`.

Note that the metamethod is tried only  
when `key` is not present in `table`.

<pre>

```
function settable_event (table, key, value)
 local h
 if type(table) == "table" then
 local v = rawget(table, key)
 -- if key is present, do raw assignment
```

```

 if v ~= nil then rawset(table, key, value); return end
 h = metatable(table).__newindex
 if h == nil then rawset(table, key, value); return end
 else
 h = metatable(table).__newindex
 if h == nil then
 error(···)---
 end
 end
 if type(h) == "function" then
 h(table, key, value) -- call the handler
 else h[key] = value -- or repeat operation on it
 end
end
end
</pre><p>

```

<li><b>"call": </b>  
called when Lua calls a value.

```

<pre>
function function_event (func, ...)
 if type(func) == "function" then
 return func(...) -- primitive call
 else
 local h = metatable(func).__call
 if h then
 return h(func, ...)
 else
 error(···)---
 end
 end
end
end
end
</pre><p>

```

## <h2>2.5 &ndash; <a name="2.5">Garbage Collection</a></h2>

<p>  
 Lua performs automatic memory management.  
 This means that  
 you have to worry neither about allocating memory for new objects  
 nor about freeing it when the objects are no longer needed.  
 Lua manages memory automatically by running

a `garbage collector` to collect all `dead objects` (that is, objects that are no longer accessible from Lua). All memory used by Lua is subject to automatic management: strings, tables, userdata, functions, threads, internal structures, etc.

<p>

Lua implements an incremental mark-and-sweep collector. It uses two numbers to control its garbage-collection cycles: the `garbage-collector pause` and the `garbage-collector step multiplier`. Both use percentage points as units (e.g., a value of 100 means an internal value of 1).

<p>

The `garbage-collector pause` controls how long the collector waits before starting a new cycle. Larger values make the collector less aggressive. Values smaller than 100 mean the collector will not wait to start a new cycle. A value of 200 means that the collector waits for the total memory in use to double before starting a new cycle.

<p>

The `garbage-collector step multiplier` controls the relative speed of the collector relative to memory allocation. Larger values make the collector more aggressive but also increase the size of each incremental step. Values smaller than 100 make the collector too slow and can result in the collector never finishing a cycle. The default is 200, which means that the collector runs at "twice" the speed of memory allocation.

<p>

If you set the step multiplier to a very large number (larger than 10% of the maximum number of bytes that the program may use), the collector behaves like a stop-the-world collector. If you then set the pause to 200, the collector behaves as in old Lua versions, doing a complete collection every time Lua doubles its memory usage.

<p>

You can change these numbers by calling [<code>lua\\_gc</code>](#lua_gc) in C or [<code>collectgarbage</code>](#pdf-collectgarbage) in Lua.

You can also use these functions to control the collector directly (e.g., stop and restart it).

<p>

As an experimental feature in Lua 5.2, you can change the collector's operation mode from incremental to *generational*. A *generational collector* assumes that most objects die young, and therefore it traverses only young (recently created) objects. This behavior can reduce the time used by the collector, but also increases memory usage (as old dead objects may accumulate). To mitigate this second problem, from time to time the generational collector performs a full collection. Remember that this is an experimental feature; you are welcome to try it, but check your gains.

### <h3>2.5.1 &ndash;

<p>

You can set garbage-collector metamethods for tables and, using the C&nbsp;API, for full userdata (see [&sect;2.4](#2.4)). These metamethods are also called *finalizers*. Finalizers allow you to coordinate Lua's garbage collection with external resource management (such as closing files, network or database connections, or freeing your own memory).

<p>

For an object (table or userdata) to be finalized when collected, you must *mark* it for finalization.

You mark an object for finalization when you set its metatable and the metatable has a field indexed by the string "`<code>__gc</code>`".

Note that if you set a metatable without a `<code>__gc</code>` field and later create that field in the metatable,

the object will not be marked for finalization.  
However, after an object is marked,  
you can freely change the `__gc` field of its metatable.

<p>

When a marked object becomes garbage,  
it is not collected immediately by the garbage collector.  
Instead, Lua puts it in a list.  
After the collection,  
Lua does the equivalent of the following function  
for each object in that list:

<pre>

```
function gc_event (obj)
 local h = metatable(obj).__gc
 if type(h) == "function" then
 h(obj)
 end
end
```

</pre>

<p>

At the end of each garbage-collection cycle,  
the finalizers for objects are called in  
the reverse order that they were marked for collection,  
among those collected in that cycle;  
that is, the first finalizer to be called is the one associated  
with the object marked last in the program.  
The execution of each finalizer may occur at any point during  
the execution of the regular code.

<p>

Because the object being collected must still be used by the  
finalizer,  
it (and other objects accessible only through it)  
must be *resurrected* by Lua.  
Usually, this resurrection is transient,  
and the object memory is freed in the next garbage-collection cycle.  
However, if the finalizer stores the object in some global place  
(e.g., a global variable),  
then there is a permanent resurrection.  
In any case,  
the object memory is freed only when it becomes completely  
inaccessible;  
its finalizer will never be called twice.

<p>

When you close a state (see [<code>lua\\_close</code></a>\),  
Lua calls the finalizers of all objects marked for finalization,  
following the reverse order that they were marked.  
If any finalizer marks new objects for collection during that phase,  
these new objects will not be finalized.](#lua_close)

### 2.5.2 &ndash; [Weak Tables](#)

A *weak table* is a table whose elements are  
*weak references*.  
A weak reference is ignored by the garbage collector.  
In other words,  
if the only references to an object are weak references,  
then the garbage collector will collect that object.

A weak table can have weak keys, weak values, or both.  
A table with weak keys allows the collection of its keys,  
but prevents the collection of its values.  
A table with both weak keys and weak values allows the collection of  
both keys and values.  
In any case, if either the key or the value is collected,  
the whole pair is removed from the table.  
The weakness of a table is controlled by the  
`__mode` field of its metatable.  
If the `__mode` field is a string containing the  
character `'k'`,  
the keys in the table are weak.  
If `__mode` contains `'v'`,  
the values in the table are weak.

A table with weak keys and strong values  
is also called an *ephemeron table*.  
In an ephemeron table,  
a value is considered reachable only if its key is reachable.  
In particular,  
if the only reference to a key comes through its value,  
the pair is removed.

Any change in the weakness of a table may take effect only at the next collect cycle.  
In particular, if you change the weakness to a stronger mode, Lua may still collect some items from that table before the change takes effect.

<p>

Only objects that have an explicit construction are removed from weak tables.  
Values, such as numbers and light C functions, are not subject to garbage collection, and therefore are not removed from weak tables (unless its associated value is collected).  
Although strings are subject to garbage collection, they do not have an explicit construction, and therefore are not removed from weak tables.

<p>

Resurrected objects  
(that is, objects being finalized  
and objects accessible only through objects being finalized)  
have a special behavior in weak tables.  
They are removed from weak values before running their finalizers, but are removed from weak keys only in the next collection after running their finalizers, when such objects are actually freed.  
This behavior allows the finalizer to access properties associated with the object through weak tables.

<p>

If a weak table is among the resurrected objects in a collection cycle,  
it may not be properly cleared until the next cycle.

## <h2>2.6 &ndash; <a name="2.6">Coroutines</a></h2>

<p>

Lua supports coroutines,  
also called *collaborative multithreading*.  
A coroutine in Lua represents an independent thread of execution.  
Unlike threads in multithread systems, however,  
a coroutine only suspends its execution by explicitly calling

a yield function.

<p>

You create a coroutine by calling [<code>coroutine.create</code></a>. Its sole argument is a function that is the main function of the coroutine. The `create` function only creates a new coroutine and returns a handle to it \(an object of type `thread`\); it does not start the coroutine.](#pdf-coroutine.create)

<p>

You execute a coroutine by calling [<code>coroutine.resume</code></a>. When you first call \[<code>coroutine.resume</code></a>, passing as its first argument a thread returned by \\[<code>coroutine.create</code></a>, the coroutine starts its execution, at the first line of its main function. Extra arguments passed to \\\[<code>coroutine.resume</code></a> are passed on to the coroutine main function. After the coroutine starts running, it runs until it terminates or `yields`.\\\]\\\(#pdf-coroutine.resume\\\)\\]\\(#pdf-coroutine.create\\)\]\(#pdf-coroutine.resume\)](#pdf-coroutine.resume)

<p>

A coroutine can terminate its execution in two ways: normally, when its main function returns (explicitly or implicitly, after the last instruction); and abnormally, if there is an unprotected error. In the first case, [<code>coroutine.resume</code></a> returns `true`, plus any values returned by the coroutine main function. In case of errors, \[<code>coroutine.resume</code></a> returns `false`, plus an error message.\]\(#pdf-coroutine.resume\)](#pdf-coroutine.resume)

<p>

A coroutine yields by calling [<code>coroutine.yield</code></a>. When a coroutine yields, the corresponding](#pdf-coroutine.yield)

`coroutine.resume"><code>coroutine.resume</code></a>` returns immediately,  
even if the yield happens inside nested function calls  
(that is, not in the main function,  
but in a function directly or indirectly called by the main function).  
In the case of a yield, `<a href="#pdf-coroutine.resume"><code>coroutine.resume</code></a>` also returns **true**,  
plus any values passed to `<a href="#pdf-coroutine.yield"><code>coroutine.yield</code></a>`.  
The next time you resume the same coroutine,  
it continues its execution from the point where it yielded,  
with the call to `<a href="#pdf-coroutine.yield"><code>coroutine.yield</code></a>` returning any extra arguments passed to `<a href="#pdf-coroutine.resume"><code>coroutine.resume</code></a>`.

`<p>`  
Like `<a href="#pdf-coroutine.create"><code>coroutine.create</code></a>`,  
the `<a href="#pdf-coroutine.wrap"><code>coroutine.wrap</code></a>`  
function also creates a coroutine,  
but instead of returning the coroutine itself,  
it returns a function that, when called, resumes the coroutine.  
Any arguments passed to this function  
go as extra arguments to `<a href="#pdf-coroutine.resume"><code>coroutine.resume</code></a>`.  
`<a href="#pdf-coroutine.wrap"><code>coroutine.wrap</code></a>` returns  
all the values returned by `<a href="#pdf-coroutine.resume"><code>coroutine.resume</code></a>`,  
except the first one (the boolean error code).  
Unlike `<a href="#pdf-coroutine.resume"><code>coroutine.resume</code></a>`,  
`<a href="#pdf-coroutine.wrap"><code>coroutine.wrap</code></a>` does not  
catch errors;  
any error is propagated to the caller.

`<p>`  
As an example of how coroutines work,  
consider the following code:

```
<pre>
function foo (a)
 print("foo", a)
 return coroutine.yield(2*a)
end

co = coroutine.create(function (a,b)
```

```

 print("co-body", a, b)
 local r = foo(a+1)
 print("co-body", r)
 local r, s = coroutine.yield(a+b, a-b)
 print("co-body", r, s)
 return b, "end"
 end)

 print("main", coroutine.resume(co, 1, 10))
 print("main", coroutine.resume(co, "r"))
 print("main", coroutine.resume(co, "x", "y"))
 print("main", coroutine.resume(co, "x", "y"))
</pre><p>

```

When you run it, it produces the following output:

```

<pre>
 co-body 1 10
 foo 2
 main true 4
 co-body r
 main true 11 -9
 co-body x y
 main true 10 end
 main false cannot resume dead coroutine
</pre>

```

<p>
 You can also create and manipulate coroutines through the C API:
 see functions <a href="#lua\_newthread"><code>lua\_newthread</code></a>,
 <a href="#lua\_resume"><code>lua\_resume</code></a>,
 and <a href="#lua\_yield"><code>lua\_yield</code></a>.

### &dash; <a name="3">The Language</a></h3>

<p>
 This section describes the lexis, the syntax, and the semantics of
 Lua.
 In other words,
 this section describes
 which tokens are valid,
 how they can be combined,
 and what their combinations mean.

<p>
 Language constructs will be explained using the usual extended BNF

notation,  
in which  
{<em>a</em>}&nbsp;means&nbsp;0 or more <em>a</em>'s, and  
[<em>a</em>]&nbsp;means an optional <em>a</em>.  
Non-terminals are shown like non-terminal,  
keywords are shown like <b>keyword</b>,  
and other terminal symbols are shown like &lsquo;<b>=</b>&rsquo;.  
The complete syntax of Lua can be found in <a href="#9">&sect;9</a>  
at the end of this manual.

## <h2>3.1 &ndash; <a name="3.1">Lexical Conventions</a></h2>

<p>  
Lua is a free-form language.  
It ignores spaces (including new lines) and comments  
between lexical elements (tokens),  
except as delimiters between names and keywords.

<p>  
<em>Names</em>  
(also called <em>identifiers</em>)  
in Lua can be any string of letters,  
digits, and underscores,  
not beginning with a digit.  
Identifiers are used to name variables, table fields, and labels.

<p>  
The following <em>keywords</em> are reserved  
and cannot be used as names:

```
<pre>
 and break do else elseif end
 false for function goto if in
 local nil not or repeat return
 then true until while
</pre>
```

<p>  
Lua is a case-sensitive language:  
<code>and</code> is a reserved word, but <code>And</code> and  
<code>AND</code>  
are two different, valid names.  
As a convention, names starting with an underscore followed by  
uppercase letters (such as <a href="#pdf-\_VERSION"><code>\_VERSION</code></a>)

are reserved for variables used by Lua.

<p>

The following strings denote other tokens:

<pre>

|    |    |       |       |      |      |    |  |
|----|----|-------|-------|------|------|----|--|
| +  | -  | *     | /     | %    | ^    | #  |  |
| == | ~= | &lt;= | &gt;= | &lt; | &gt; | =  |  |
| (  | )  | {     | }     | [    | ]    | :: |  |
| ;  | :  | ,     | .     | ..   | ...  |    |  |

</pre>

<p>

<em>Literal strings</em>

can be delimited by matching single or double quotes,  
and can contain the following C-like escape sequences:

'<code>\a</code>' (bell),  
'<code>\b</code>' (backspace),  
'<code>\f</code>' (form feed),  
'<code>\n</code>' (newline),  
'<code>\r</code>' (carriage return),  
'<code>\t</code>' (horizontal tab),  
'<code>\v</code>' (vertical tab),  
'<code>\\</code>' (backslash),  
'<code>\"</code>' (quotation mark [double quote]),  
and '<code>\'</code>' (apostrophe [single quote]).

A backslash followed by a real newline  
results in a newline in the string.

The escape sequence '<code>\z</code>' skips the following span  
of white-space characters,  
including line breaks;

it is particularly useful to break and indent a long literal string  
into multiple lines without adding the newlines and spaces  
into the string contents.

<p>

A byte in a literal string can also be specified by its numerical  
value.

This can be done with the escape sequence <code>\x<em>XX</em></code>,  
where <em>XX</em> is a sequence of exactly two hexadecimal digits,  
or with the escape sequence <code>\<em>ddd</em></code>,  
where <em>ddd</em> is a sequence of up to three decimal digits.  
(Note that if a decimal escape is to be followed by a digit,  
it must be expressed using exactly three digits.)

Strings in Lua can contain any 8-bit value, including embedded zeros,  
which can be specified as '<code>\0</code>'.

<p>

Literal strings can also be defined using a long format enclosed by <em>long brackets</em>.

We define an <em>opening long bracket of level <em>n</em></em> as an opening square bracket followed by <em>n</em> equal signs followed by another opening square bracket.

So, an opening long bracket of level&nbsp;0 is written as <code>[[</code>,

an opening long bracket of level&nbsp;1 is written as <code>[=[</code>, and so on.

A <em>closing long bracket</em> is defined similarly;

for instance, a closing long bracket of level&nbsp;4 is written as <code>]====]</code>.

A <em>long literal</em> starts with an opening long bracket of any level and

ends at the first closing long bracket of the same level.

It can contain any text except a closing bracket of the proper level.

Literals in this bracketed form can run for several lines,

do not interpret any escape sequences,

and ignore long brackets of any other level.

Any kind of end-of-line sequence

(carriage return, newline, carriage return followed by newline,

or newline followed by carriage return)

is converted to a simple newline.

<p>

Any byte in a literal string not

explicitly affected by the previous rules represents itself.

However, Lua opens files for parsing in text mode,

and the system file functions may have problems with some control characters.

So, it is safer to represent

non-text data as a quoted literal with

explicit escape sequences for non-text characters.

<p>

For convenience,

when the opening long bracket is immediately followed by a newline, the newline is not included in the string.

As an example, in a system using ASCII

(in which '<code>a</code>' is coded as&nbsp;97,

newline is coded as&nbsp;10, and '<code>1</code>' is coded as&nbsp;49),

the five literal strings below denote the same string:

<pre>

```

a = 'alo\n123"'
a = "alo\n123\'"
a = '\97lo\10\04923"'
a = [[alo
123"]]
a = [=[
alo
123"]]=]

```

A *numerical constant* can be written with an optional fractional part and an optional decimal exponent, marked by a letter '`e`' or '`E`'. Lua also accepts hexadecimal constants, which start with `0x` or `0X`. Hexadecimal constants also accept an optional fractional part plus an optional binary exponent, marked by a letter '`p`' or '`P`'. Examples of valid numerical constants are

```

3 3.0 3.1416 314.16e-2 0.31416E1
0xff 0x0.1E 0xA23p-4 0X1.921FB54442D18P+1

```

A *comment* starts with a double hyphen (`--`) anywhere outside a string. If the text immediately after `--` is not an opening long bracket, the comment is a *short comment*, which runs until the end of the line. Otherwise, it is a *long comment*, which runs until the corresponding closing long bracket. Long comments are frequently used to disable code temporarily.

## 3.2 &ndash; [Variables](#)

Variables are places that store values. There are three kinds of variables in Lua: global variables, local variables, and table fields.

<p>

A single name can denote a global variable or a local variable (or a function's formal parameter, which is a particular kind of local variable):

<pre>

```
var ::= Name
```

</pre><p>

Name denotes identifiers, as defined in [§3.1](#3.1).

<p>

Any variable name is assumed to be global unless explicitly declared as a local (see [§3.3.7](#3.3.7)).

Local variables are *lexically scoped*:

local variables can be freely accessed by functions

defined inside their scope (see [§3.5](#3.5)).

<p>

Before the first assignment to a variable, its value is **nil**.

<p>

Square brackets are used to index a table:

<pre>

```
var ::= prefixexp ‘[’ exp ‘]’</pre>
```

</pre><p>

The meaning of accesses to table fields can be changed via metatables.

An access to an indexed variable `t[i]` is equivalent to a call `gettable_event(t,i)`.

(See [§2.4](#2.4) for a complete description of the `gettable_event` function.

This function is not defined or callable in Lua.

We use it here only for explanatory purposes.)

<p>

The syntax `var.Name` is just syntactic sugar for `var["Name"]`:

<pre>

```
var ::= prefixexp ‘.’ Name
```

</pre>

<p>

An access to a global variable `x` is equivalent to `_ENV.x`.

Due to the way that chunks are compiled,  
<code>\_ENV</code> is never a global name (see <a href="#2.2">&sect;2.2</a>).

## 3.3 &ndash; <a name="3.3">Statements</a></h2>

<p>  
Lua supports an almost conventional set of statements,  
similar to those in Pascal or C.  
This set includes  
assignments, control structures, function calls,  
and variable declarations.

### 3.3.1 &ndash; <a name="3.3.1">Blocks</a></h3>

<p>  
A block is a list of statements,  
which are executed sequentially:

```
<pre> block ::= {stat}
```

</pre><p>  
Lua has <em>empty statements</em>  
that allow you to separate statements with semicolons,  
start a block with a semicolon  
or write two semicolons in sequence:

```
<pre> stat ::= ‘;’;
```

<p>  
Function calls and assignments  
can start with an open parenthesis.  
This possibility leads to an ambiguity in Lua's grammar.  
Consider the following fragment:

```
<pre> a = b + c
 (print or io.write)('done')
```

</pre><p>  
The grammar could see it in two ways:

```
<pre>
```

```
a = b + c(print or io.write)('done')
```

```
a = b + c; (print or io.write)('done')
```

</pre><p>

The current parser always sees such constructions in the first way,

interpreting the open parenthesis

as the start of the arguments to a call.

To avoid this ambiguity,

it is a good practice to always precede with a semicolon statements that start with a parenthesis:

<pre>

```
;(print or io.write)('done')
```

</pre>

<p>

A block can be explicitly delimited to produce a single statement:

<pre>

```
stat ::= do block end
```

</pre><p>

Explicit blocks are useful

to control the scope of variable declarations.

Explicit blocks are also sometimes used to

add a <b>return</b> statement in the middle

of another block (see <a href="#3.3.4">&sect;3.3.4</a>).

### <h3>3.3.2 &ndash; <a name="3.3.2">Chunks</a></h3>

<p>

The unit of compilation of Lua is called a <em>chunk</em>.

Syntactically,

a chunk is simply a block:

<pre>

```
chunk ::= block
```

</pre>

<p>

Lua handles a chunk as the body of an anonymous function with a variable number of arguments

(see <a href="#3.4.10">&sect;3.4.10</a>).

As such, chunks can define local variables,

receive arguments, and return values.

Moreover, such anonymous function is compiled as in the

scope of an external local variable called `_ENV` (see [§2.2](#2.2)).

The resulting function always has `_ENV` as its only upvalue, even if it does not use that variable.

<p>

A chunk can be stored in a file or in a string inside the host program.

To execute a chunk,

Lua first precompiles the chunk into instructions for a virtual machine,

and then it executes the compiled code

with an interpreter for the virtual machine.

<p>

Chunks can also be precompiled into binary form;

see program `luac` for details.

Programs in source and compiled forms are interchangeable;

Lua automatically detects the file type and acts accordingly.

### <h3>3.3.3 &ndash; <a name="3.3.3">Assignment</a></h3>

<p>

Lua allows multiple assignments.

Therefore, the syntax for assignment

defines a list of variables on the left side

and a list of expressions on the right side.

The elements in both lists are separated by commas:

<pre>

```
stat ::= varlist ‘=’ explist
```

```
varlist ::= var {‘,’ var}
```

```
explist ::= exp {‘,’ exp}
```

</pre><p>

Expressions are discussed in [§3.4](#3.4).

<p>

Before the assignment,

the list of values is *adjusted* to the length of the list of variables.

If there are more values than needed,

the excess values are thrown away.  
If there are fewer values than needed,  
the list is extended with as many `nil`'s as needed.  
If the list of expressions ends with a function call,  
then all values returned by that call enter the list of values,  
before the adjustment  
(except when the call is enclosed in parentheses; see [§3.4](#3.4)).

`<p>`  
The assignment statement first evaluates all its expressions  
and only then are the assignments performed.  
Thus the code

```
<pre>
 i = 3
 i, a[i] = i+1, 20
</pre><p>
```

sets `a[3]` to 20, without affecting `a[4]`  
because the `i` in `a[i]` is evaluated (to 3)  
before it is assigned 4.  
Similarly, the line

```
<pre>
 x, y = y, x
</pre><p>
```

exchanges the values of `x` and `y`,  
and

```
<pre>
 x, y, z = y, z, x
</pre><p>
```

cyclically permutes the values of `x`, `y`, and  
`z`.

`<p>`  
The meaning of assignments to global variables  
and table fields can be changed via metatables.  
An assignment to an indexed variable `t[i] = val` is  
equivalent to  
`settable_event(t,i,val)`.  
(See [§2.4](#2.4) for a complete description of the  
`settable_event` function.  
This function is not defined or callable in Lua.  
We use it here only for explanatory purposes.)

`<p>`

An assignment to a global variable `x = val` is equivalent to the assignment `_ENV.x = val` (see [§2.2](#2.2)).

### 3.3.4 [Control Structures](#)

The control structures

**if**, **while**, and **repeat** have the usual meaning and familiar syntax:

```
<pre>
 stat ::= while exp do block end
 stat ::= repeat block until exp
 stat ::= if exp then block {elseif exp
then block} [else block] end
</pre>
```

Lua also has a **for** statement, in two flavors (see [§3.3.5](#3.3.5)).

The condition expression of a control structure can return any value.

Both **false** and **nil** are considered false.

All values different from **nil** and **false** are considered true

(in particular, the number 0 and the empty string are also true).

In the **repeat**&ndash;**until** loop, the inner block does not end at the **until** keyword, but only after the condition.

So, the condition can refer to local variables declared inside the loop block.

The **goto** statement transfers the program control to a label. For syntactical reasons, labels in Lua are considered statements too:

```

<pre>
 stat ::= goto Name
 stat ::= label
 label ::= ‘::’ Name ‘::’
</pre>

```

A label is visible in the entire block where it is defined, except inside nested blocks where a label with the same name is defined and inside nested functions. A goto may jump to any visible label as long as it does not enter into the scope of a local variable.

Labels and empty statements are called *void statements*, as they perform no actions.

The **break** statement terminates the execution of a **while**, **repeat**, or **for** loop, skipping to the next statement after the loop:

```

<pre>
 stat ::= break
</pre>

```

A **break** ends the innermost enclosing loop.

The **return** statement is used to return values from a function or a chunk (which is a function in disguise).

Functions can return more than one value, so the syntax for the **return** statement is

```

<pre>
 stat ::= return [explist] [‘;’]
</pre>

```

The **return** statement can only be written as the last statement of a block. If it is really necessary to **return** in the middle of a block, then an explicit inner block can be used, as in the idiom `do return end`, because now **return** is the last statement in its (inner) block.

### 3.3.5 &ndash; [3.3.5](#) For Statement

The **for** statement has two forms:  
one numeric and one generic.

The numeric **for** loop repeats a block of code while a control variable runs through an arithmetic progression. It has the following syntax:

```
<pre>
```

```
 stat ::= for Name ' exp
‘' exp [' exp] do
block end
```

```
</pre><p>
```

The *block* is repeated for *name* starting at the value of the first *exp*, until it passes the second *exp* by steps of the third *exp*.

More precisely, a **for** statement like

```
<pre>
```

```
 for v = e1, e2, e3 do block
end
```

```
</pre><p>
```

is equivalent to the code:

```
<pre>
```

```
 do
 local var, limit, step =
tonumber(e1), tonumber(e2), tonumber(e3)
 if not (var and limit and step) then
error() end
 while (step > 0 and var <= limit
em>) or (step <= 0 and var >= limit)
do
 local v = var
 block
 var = var + step
 end
 end
```

```
</pre><p>
```

Note the following:

```

```

```

```

All three control expressions are evaluated only once, before the loop starts.

They must all result in numbers.

```

```

```

```

`<em>var</em></code>, <em>limit</em></code>, and <em>step</em></code> are invisible variables.`

The names shown here are for explanatory purposes only.

```

```

```

```

If the third expression (the step) is absent, then a step of&nbsp;1 is used.

```

```

```

```

You can use `<b>break</b>` to exit a `<b>for</b>` loop.

```

```

```

```

The loop variable `<code>v</code>` is local to the loop; you cannot use its value after the `<b>for</b>` ends or is broken.

If you need this value, assign it to another variable before breaking or exiting the loop.

```

```

```

```

```
<p>
```

The generic `<b>for</b>` statement works over functions, called `<em>iterators</em>`.

On each iteration, the iterator function is called to produce a new value,

stopping when this new value is `<b>nil</b>`.

The generic `<b>for</b>` loop has the following syntax:

```
<pre>
```

```
 stat ::= for namelist in explist do block
end
```

```
 namelist ::= Name {‘,’; Name}
```

```
</pre><p>
```

A `<b>for</b>` statement like

```
<pre>
 for var_1, ···, var_n in
explist do block end
</pre><p>
```

is equivalent to the code:

```
<pre>
 do
 local f, s, var = explist
 while true do
 local var_1, ···, var_n
 = f(s, var)
 if var_1 == nil then break end
 var = var_1
 block
 end
 end
</pre><p>
```

Note the following:

- <ul>

- <li>  
<code><em>explist</em></code> is evaluated only once.  
Its results are an <em>iterator</em> function,  
a <em>state</em>,&br/>and an initial value for the first <em>iterator variable</em>.  
</li>
- <li>  
<code><em>f</em></code>, <code><em>s</em></code>, and <code><em>var</em></code> are invisible variables.  
The names are here for explanatory purposes only.  
</li>
- <li>  
You can use <b>break</b> to exit a <b>for</b> loop.  
</li>
- <li>  
The loop variables <code><em>var\_i</em></code> are local to the loop;  
you cannot use their values after the <b>for</b> ends.  
If you need these values,  
then assign them to other variables before breaking or exiting the  
loop.  
</li>

- </ul>

### 3.3.6 [Function Calls as Statements](#)

To allow possible side-effects,  
function calls can be executed as statements:

```
<pre>
 stat ::= functioncall
</pre>
```

In this case, all returned values are thrown away.  
Function calls are explained in [§3.4.9](#).

### 3.3.7 [Local Declarations](#)

Local variables can be declared anywhere inside a block.  
The declaration can include an initial assignment:

```
<pre>
 stat ::= local namelist ['local namelist ['‘=’
explist]
</pre>
```

If present, an initial assignment has the same semantics  
of a multiple assignment (see [§3.3.3](#)).  
Otherwise, all variables are initialized with **nil**.

A chunk is also a block (see [§3.3.2](#)),  
and so local variables can be declared in a chunk outside any explicit  
block.

The visibility rules for local variables are explained in [§3.5](#).

## 3.4 [Expressions](#)

The basic expressions in Lua are the following:

```

<pre>
 exp ::= prefixexp
 exp ::= nil | >false | >true
 exp ::= Number
 exp ::= String
 exp ::= functiondef
 exp ::= tableconstructor
 exp ::= ‘...’;
 exp ::= exp binop exp
 exp ::= unop exp
 prefixexp ::= var | functioncall | ‘(’; exp
‘)’;
</pre>

```

Numbers and literal strings are explained in [§3.1](#3.1);  
 variables are explained in [§3.2](#3.2);  
 function definitions are explained in [§3.4.10](#3.4.10);  
 function calls are explained in [§3.4.9](#3.4.9);  
 table constructors are explained in [§3.4.8](#3.4.8).  
 Vararg expressions,  
 denoted by three dots ('`...`'), can only be used when  
 directly inside a vararg function;  
 they are explained in [§3.4.10](#3.4.10).

Binary operators comprise arithmetic operators (see [§3.4.1](#3.4.1)),  
 relational operators (see [§3.4.3](#3.4.3)), logical  
 operators (see [§3.4.4](#3.4.4)),  
 and the concatenation operator (see [§3.4.5](#3.4.5)).  
 Unary operators comprise the unary minus (see [§3.4.1](#3.4.1)),  
 the unary **not** (see [§3.4.4](#3.4.4)),  
 and the unary `length` operator (see [§3.4.6](#3.4.6)).

Both function calls and vararg expressions can result in multiple  
 values.  
 If a function call is used as a statement (see [§3.3.6](#3.3.6)),  
 then its return list is adjusted to zero elements,  
 thus discarding all returned values.  
 If an expression is used as the last (or the only) element

of a list of expressions,  
then no adjustment is made  
(unless the expression is enclosed in parentheses).  
In all other contexts,  
Lua adjusts the result list to one element,  
either discarding all values except the first one  
or adding a single `<b>nil</b>` if there are no values.

<p>

Here are some examples:

<pre>

```
f() -- adjusted to 0 results
g(f(), x) -- f() is adjusted to 1 result
g(x, f()) -- g gets x plus all results from f()
a,b,c = f(), x -- f() is adjusted to 1 result (c gets nil)
a,b = ... -- a gets the first vararg parameter, b gets
 -- the second (both a and b can get nil if
```

there

```
 -- is no corresponding vararg parameter)
```

```
a,b,c = x, f() -- f() is adjusted to 2 results
a,b,c = f() -- f() is adjusted to 3 results
return f() -- returns all results from f()
return ... -- returns all received vararg parameters
return x,y,f() -- returns x, y, and all results from f()
{f()} -- creates a list with all results from f()
{...} -- creates a list with all vararg parameters
{f(), nil} -- f() is adjusted to 1 result
```

</pre>

<p>

Any expression enclosed in parentheses always results in only one value.

Thus,

`<code>(f(x,y,z))</code>` is always a single value,

even if `<code>f</code>` returns several values.

(The value of `<code>(f(x,y,z))</code>` is the first value returned by `<code>f</code>`

or `<b>nil</b>` if `<code>f</code>` does not return any values.)

### <h3>3.4.1 &ndash; <a name="3.4.1">Arithmetic Operators</a></h3><p>

Lua supports the usual arithmetic operators:

the binary `<code>+</code>` (addition),

`<code>-</code>` (subtraction), `<code>*</code>` (multiplication),

`<code>/</code>` (division), `<code>%</code>` (modulo), and `<code>^</code>` (exponentiation);

and unary `-` (mathematical negation).  
If the operands are numbers, or strings that can be converted to numbers (see [§3.4.2](#3.4.2)), then all operations have the usual meaning. Exponentiation works for any exponent. For instance, `x^(-0.5)` computes the inverse of the square root of `x`. Modulo is defined as

```
<pre>
 a % b == a - math.floor(a/b)*b
</pre><p>
```

That is, it is the remainder of a division that rounds the quotient towards minus infinity.

### 3.4.2 &ndash; [Coercion](#)

Lua provides automatic conversion between string and number values at run time. Any arithmetic operation applied to a string tries to convert this string to a number, following the rules of the Lua lexer. (The string may have leading and trailing spaces and a sign.) Conversely, whenever a number is used where a string is expected, the number is converted to a string, in a reasonable format. For complete control over how numbers are converted to strings, use the `format` function from the string library (see [string.format](#)).

### 3.4.3 &ndash; [Relational Operators](#)

The relational operators in Lua are

```
<pre>
 == ~= < > <= >=
</pre><p>
```

These operators always result in **false** or **true**.

Equality (`==`) first compares the type of its operands. If the types are different, then the result is **false**. Otherwise, the values of the operands are compared.

Numbers and strings are compared in the usual way.  
Tables, userdata, and threads  
are compared by reference:  
two objects are considered equal only if they are the same object.  
Every time you create a new object  
(a table, userdata, or thread),  
this new object is different from any previously existing object.  
Closures with the same reference are always equal.  
Closures with any detectable difference  
(different behavior, different definition) are always different.

<p>

You can change the way that Lua compares tables and userdata  
by using the "eq" metamethod (see [§2.4](#2.4)).

<p>

The conversion rules of [§3.4.2](#3.4.2)  
do not apply to equality comparisons.  
Thus, `"0"==0` evaluates to **false**,  
and `t[0]` and `t["0"]` denote different  
entries in a table.

<p>

The operator `~=` is exactly the negation of equality  
(`==`).

<p>

The order operators work as follows.  
If both arguments are numbers, then they are compared as such.  
Otherwise, if both arguments are strings,  
then their values are compared according to the current locale.  
Otherwise, Lua tries to call the "lt" or the "le"  
metamethod (see [§2.4](#2.4)).  
A comparison `a > b` is translated to `b < a`  
and `a >= b` is translated to `b <= a`.

### 3.4.4 &ndash; Logical Operators

The logical operators in Lua are  
**and**, **or**, and **not**.  
Like the control structures (see [§3.3.4](#3.3.4)),  
all logical operators consider both **false** and **nil** as

false  
and anything else as true.

<p>

The negation operator **<b>not</b>** always returns **<b>>false</b>** or **<b>>true</b>**.

The conjunction operator **<b>and</b>** returns its first argument if this value is **<b>>false</b>** or **<b>nil</b>**; otherwise, **<b>and</b>** returns its second argument.

The disjunction operator **<b>or</b>** returns its first argument if this value is different from **<b>nil</b>** and **<b>>false</b>**; otherwise, **<b>or</b>** returns its second argument.

Both **<b>and</b>** and **<b>or</b>** use short-cut evaluation;

that is,

the second operand is evaluated only if necessary.

Here are some examples:

<pre>

```
10 or 20 --> 10
10 or error() --> 10
nil or "a" --> "a"
nil and 10 --> nil
false and error() --> false
false and nil --> false
false or nil --> nil
10 and 20 --> 20
```

</pre><p>

(In this manual,

`--&gt;` indicates the result of the preceding expression.)

<h3>3.4.5 &ndash; <a name="3.4.5">Concatenation</a></h3><p>

The string concatenation operator in Lua is

denoted by two dots ('`<code>..</code>`').

If both operands are strings or numbers, then they are converted to strings according to the rules mentioned in <a

href="#3.4.2">&sect;3.4.2</a>.

Otherwise, the `<code>__concat</code>` metamethod is called (see <a href="#2.4">&sect;2.4</a>).

<h3>3.4.6 &ndash; <a name="3.4.6">The Length Operator</a></h3>

<p>

The length operator is denoted by the unary prefix operator `#`.

The length of a string is its number of bytes (that is, the usual meaning of string length when each character is one byte).

<p>

A program can modify the behavior of the length operator for any value but strings through the `__len` metamethod (see [§2.4](#2.4)).

<p>

Unless a `__len` metamethod is given, the length of a table `t` is only defined if the table is a *sequence*, that is, the set of its positive numeric keys is equal to  $\{1..n\}$  for some non-negative integer  $n$ . In that case,  $n$  is its length. Note that a table like

<pre>

```
{10, 20, nil, 40}
```

</pre><p>

is not a sequence, because it has the key `4` but does not have the key `3`.

(So, there is no  $n$  such that the set  $\{1..n\}$  is equal to the set of positive numeric keys of that table.)

Note, however, that non-numeric keys do not interfere with whether a table is a sequence.

### 3.4.7 &ndash; [Precedence](#)

Operator precedence in Lua follows the table below, from lower to higher priority:

<pre>

```
or
and
<math>\<math>
..
+ -
* / %
not # - (unary)
```

$$^$$

```
</pre><p>
As usual,
you can use parentheses to change the precedences of an expression.
The concatenation ('<code>..

```

### 3.4.8 &ndash; [3.4.8](#) Table Constructors

Table constructors are expressions that create tables.
Every time a constructor is evaluated, a new table is created.
A constructor can be used to create an empty table
or to create a table and initialize some of its fields.
The general syntax for constructors is

```
<pre>
 tableconstructor ::= '[fieldlist]
'
 fieldlist ::= field {fieldsep field} [fieldsep]
 field ::= 'exp ' | Name 'exp | exp
 fieldsep ::= , | .
</pre>
```

Each field of the form `[exp1] = exp2` adds to the new table an entry with key `exp1` and value `exp2`.
A field of the form `name = exp` is equivalent to `["name"] = exp`.
Finally, fields of the form `exp` are equivalent to `[i] = exp`, where `i` are consecutive numerical integers, starting with 1.
Fields in the other formats do not affect this counting.
For example,

```
<pre>
 a = { [f(1)] = g; "x", "y"; x = 1, f(x), [30] = 23; 45 }
</pre><p>
is equivalent to
```

```
<pre>
do
 local t = {}
```

```

 t[f(1)] = g
 t[1] = "x" -- 1st exp
 t[2] = "y" -- 2nd exp
 t.x = 1 -- t["x"] = 1
 t[3] = f(x) -- 3rd exp
 t[30] = 23
 t[4] = 45 -- 4th exp
 a = t
end
</pre>

```

If the last field in the list has the form `exp` and the expression is a function call or a vararg expression, then all values returned by this expression enter the list consecutively (see [&sect;3.4.9](#3.4.9)).

The field list can have an optional trailing separator, as a convenience for machine-generated code.

### 3.4.9 &ndash; [Function Calls](#)

A function call in Lua has the following syntax:

```

functioncall ::= prefixexp args
</pre>

```

In a function call, first `prefixexp` and `args` are evaluated. If the value of `prefixexp` has type `function`, then this function is called with the given arguments. Otherwise, the `prefixexp` "call" metamethod is called, having as first parameter the value of `prefixexp`, followed by the original call arguments (see [&sect;2.4](#2.4)).

The form

```

functioncall ::= prefixexp ‘:’ Name args
</pre>

```

can be used to call "methods".

A call `v:name(<em>args</em>)` is syntactic sugar for `v.name(v,<em>args</em>)`, except that `v` is evaluated only once.

<p>

Arguments have the following syntax:

<pre>

```
 args ::= ‘(’ [explist] ‘)</pre>
```

</pre><p>

All argument expressions are evaluated before the call.

A call of the form `f{<em>fields</em>}` is syntactic sugar for `f({<em>fields</em>})`; that is, the argument list is a single new table.

A call of the form `f'<em>string</em>'` (or `f"<em>string</em>"` or `f[[<em>string</em>]]`)

is syntactic sugar for `f('<em>string</em>')`; that is, the argument list is a single literal string.

<p>

A call of the form `return <em>functioncall</em>` is called a <em>tail call</em>.

Lua implements <em>proper tail calls</em>

(or <em>proper tail recursion</em>):

in a tail call,

the called function reuses the stack entry of the calling function.

Therefore, there is no limit on the number of nested tail calls that a program can execute.

However, a tail call erases any debug information about the calling function.

Note that a tail call only happens with a particular syntax, where the `return` has one single function call as argument; this syntax makes the calling function return exactly the returns of the called function.

So, none of the following examples are tail calls:

<pre>

```
 return (f(x)) -- results adjusted to 1
 return 2 * f(x)
 return x, f(x) -- additional results
 f(x); return -- results discarded
 return x or f(x) -- results adjusted to 1
```

</pre>

### 3.4.10 &ndash; [3.4.10](#) Function Definitions

The syntax for function definition is

```
<pre>
```

```
 functiondef ::= function funcbody
 funcbody ::= ‘(’ [parlist] ‘)</
 b>’ block end
</pre>
```

The following syntactic sugar simplifies function definitions:

```
<pre>
```

```
 stat ::= function funcname funcbody
 stat ::= local function Name funcbody
 funcname ::= Name {‘.’ Name} [‘:</
 b>’ Name]
</pre><p>
```

The statement

```
<pre>
```

```
 function f () body end
</pre><p>
translates to
```

```
<pre>
```

```
 f = function () body end
</pre><p>
The statement
```

```
<pre>
```

```
 function t.a.b.c.f () body end
</pre><p>
translates to
```

```
<pre>
```

```
 t.a.b.c.f = function () body end
</pre><p>
The statement
```

```
<pre>
```

```
 local function f () body end
</pre><p>
translates to
```

```
<pre>
 local f; f = function () body end
</pre><p>
not to
```

```
<pre>
 local f = function () body end
</pre><p>
(This only makes a difference when the body of the function
contains references to <code>f</code>.)
```

<p>  
A function definition is an executable expression,  
whose value has type <em>function</em>.  
When Lua precompiles a chunk,  
all its function bodies are precompiled too.  
Then, whenever Lua executes the function definition,  
the function is <em>instantiated</em> (or <em>closed</em>).  
This function instance (or <em>closure</em>)  
is the final value of the expression.

<p>  
Parameters act as local variables that are  
initialized with the argument values:

```
<pre>
 parlist ::= namelist [‘, ’ ‘...’] | ‘...’
</pre><p>
```

When a function is called,  
the list of arguments is adjusted to  
the length of the list of parameters,  
unless the function is a <em>vararg function</em>,  
which is indicated by three dots ('<code>...</code>')  
at the end of its parameter list.  
A vararg function does not adjust its argument list;  
instead, it collects all extra arguments and supplies them  
to the function through a <em>vararg expression</em>,  
which is also written as three dots.  
The value of this expression is a list of all actual extra arguments,  
similar to a function with multiple results.  
If a vararg expression is used inside another expression  
or in the middle of a list of expressions,  
then its return list is adjusted to one element.  
If the expression is used as the last element of a list of  
expressions,  
then no adjustment is made

(unless that last expression is enclosed in parentheses).

<p>

As an example, consider the following definitions:

<pre>

```
function f(a, b) end
function g(a, b, ...) end
function r() return 1,2,3 end
```

</pre><p>

Then, we have the following mapping from arguments to parameters and to the vararg expression:

<pre>

| CALL          | PARAMETERS                    |
|---------------|-------------------------------|
| f(3)          | a=3, b=nil                    |
| f(3, 4)       | a=3, b=4                      |
| f(3, 4, 5)    | a=3, b=4                      |
| f(r()), 10)   | a=1, b=10                     |
| f(r())        | a=1, b=2                      |
| g(3)          | a=3, b=nil, ... --> (nothing) |
| g(3, 4)       | a=3, b=4, ... --> (nothing)   |
| g(3, 4, 5, 8) | a=3, b=4, ... --> 5 8         |
| g(5, r())     | a=5, b=1, ... --> 2 3         |

</pre>

<p>

Results are returned using the <b>return</b> statement (see <a href="#3.3.4">&sect;3.3.4</a>).

If control reaches the end of a function without encountering a <b>return</b> statement, then the function returns with no results.

<p>

There is a system-dependent limit on the number of values that a function may return.

This limit is guaranteed to be larger than 1000.

<p>

The <em>colon</em> syntax

is used for defining <em>methods</em>,

that is, functions that have an implicit extra parameter <code>self</code>.

Thus, the statement

```
<pre>
 function t.a.b.c:f (params) body end
</pre><p>
```

is syntactic sugar for

```
<pre>
 t.a.b.c.f = function (self, params) body end
</pre>
```

## <h2>3.5 &ndash; <a name="3.5">Visibility Rules</a></h2>

<p>

Lua is a lexically scoped language.  
The scope of a local variable begins at the first statement after its declaration and lasts until the last non-void statement of the innermost block that includes the declaration.  
Consider the following example:

```
<pre>
 x = 10 -- global variable
 do -- new block
 local x = x -- new 'x', with value 10
 print(x) --> 10
 x = x+1
 do -- another block
 local x = x+1 -- another 'x'
 print(x) --> 12
 end
 print(x) --> 11
 end
 print(x) --> 10 (the global one)
</pre>
```

<p>  
Notice that, in a declaration like <code>local x = x</code>, the new <code>x</code> being declared is not in scope yet, and so the second <code>x</code> refers to the outside variable.

<p>  
Because of the lexical scoping rules, local variables can be freely accessed by functions defined inside their scope.

A local variable used by an inner function is called an *upvalue*, or *external local variable*, inside the inner function.

<p>

Notice that each execution of a **local** statement defines new local variables. Consider the following example:

<pre>

```
a = {}
local x = 20
for i=1,10 do
 local y = 0
 a[i] = function () y=y+1; return x+y end
end
```

</pre><p>

The loop creates ten closures (that is, ten instances of the anonymous function). Each of these closures uses a different `y` variable, while all of them share the same `x`.

## 4 &ndash; [The Application Program Interface](#)

<p>

This section describes the C API for Lua, that is, the set of functions available to the host program to communicate with Lua.

All API functions and related types and constants are declared in the header file [pdf-lua.h](#) `lua.h`.

<p>

Even when we use the term "function", any facility in the API may be provided as a macro instead. Except where stated otherwise, all such macros use each of their arguments exactly once (except for the first argument, which is always a Lua state), and so do not generate any hidden side-effects.

<p>

As in most C libraries, the Lua API functions do not check their arguments for validity or consistency. However, you can change this behavior by compiling Lua with the macro `LUA_USE_APICHECK` defined.

## 4.1 – The Stack

Lua uses a *virtual stack* to pass values to and from C. Each element in this stack represents a Lua value (*nil*, number, string, etc.).

Whenever Lua calls C, the called function gets a new stack, which is independent of previous stacks and of stacks of C functions that are still active. This stack initially contains any arguments to the C function and it is where the C function pushes its results to be returned to the caller (see [`lua\_CFunction`](#lua_CFunction)).

For convenience, most query operations in the API do not follow a strict stack discipline. Instead, they can refer to any element in the stack by using an *index*:

- A positive index represents an absolute stack position (starting at 1);
- a negative index represents an offset relative to the top of the stack.

More specifically, if the stack has *n* elements, then *index* 1 represents the first element (that is, the element that was pushed onto the stack first) and *index* *n* represents the last element; *index* -1 also represents the last element (that is, the element at the top) and *index* -*n* represents the first element.

## 4.2 &ndash; [Stack Size](#)

When you interact with the Lua API, you are responsible for ensuring consistency. In particular, *you are responsible for controlling stack overflow*. You can use the function [lua\\_checkstack](#) to ensure that the stack has extra slots when pushing new elements.

Whenever Lua calls C, it ensures that the stack has at least [LUA\\_MINSTACK](#) extra slots. `LUA_MINSTACK` is defined as 20, so that usually you do not have to worry about stack space unless your code has loops pushing elements onto the stack.

When you call a Lua function without a fixed number of results (see [lua\\_call](#)), Lua ensures that the stack has enough size for all results, but it does not ensure any extra space. So, before pushing anything in the stack after such a call you should use [lua\\_checkstack](#).

## 4.3 &ndash; [Valid and Acceptable Indices](#)

Any function in the API that receives stack indices works only with *valid indices* or *acceptable indices*.

A *valid index* is an index that refers to a real position within the stack, that is, its position lies between 1 and the stack top (`1 ≤ abs(index) ≤ top`).

Usually, functions that can modify the value at an index require valid indices.

<p>  
Unless otherwise noted,  
any function that accepts valid indices also accepts *pseudo-indices*,  
which represent some Lua values that are accessible to `C` but which are not in the stack.  
Pseudo-indices are used to access the registry  
and the upvalues of a `C` function (see [§4.4](#4.4)).  
</p>

<p>  
Functions that do not need a specific stack position,  
but only a value in the stack (e.g., query functions),  
can be called with acceptable indices.  
An *acceptable index* can be any valid index,  
including the pseudo-indices,  
but it also can be any positive index after the stack top  
within the space allocated for the stack,  
that is, indices up to the stack size.  
(Note that 0 is never an acceptable index.)  
Except when noted otherwise,  
functions in the API work with acceptable indices.  
</p>

<p>  
Acceptable indices serve to avoid extra tests  
against the stack top when querying the stack.  
For instance, a `C` function can query its third argument  
without the need to first check whether there is a third argument,  
that is, without the need to check whether 3 is a valid index.  
</p>

<p>  
For functions that can be called with acceptable indices,  
any non-valid index is treated as if it  
contains a value of a virtual type `LUA_TNONE`,  
which behaves like a nil value.  
</p>

## 4.4 – C Closures</h2>

<p>  
When a `C` function is created,  
</p>

it is possible to associate some values with it, thus creating a `Closure` (see [`lua\_pushcclosure`](#lua_pushcclosure)); these values are called `upvalues` and are accessible to the function whenever it is called.

<p>

Whenever a `Closure` function is called, its upvalues are located at specific pseudo-indices. These pseudo-indices are produced by the macro [`lua\_upvalueindex`](#lua_upvalueindex). The first value associated with a function is at position `lua_upvalueindex(1)`, and so on. Any access to `lua_upvalueindex(n)`, where *n* is greater than the number of upvalues of the current function (but not greater than 256), produces an acceptable but invalid index.

## <h2>4.5 &ndash;

<p>

Lua provides a `registry`, a predefined table that can be used by any `Closure` to store whatever Lua values it needs to store. The registry table is always located at pseudo-index `LUA_REGISTRYINDEX`, which is a valid index. Any `library` can store data into this table, but it should take care to choose keys that are different from those used by other libraries, to avoid collisions. Typically, you should use as key a string containing your library name, or a light userdata with the address of a `object` in your code, or any Lua object created by your code. As with global names, string keys starting with an underscore followed by uppercase letters are reserved for Lua.

<p>

The integer keys in the registry are used by the reference mechanism, implemented by the auxiliary library, and by some predefined values. Therefore, integer keys should not be used for other purposes.

<p>

When you create a new Lua state,  
its registry comes with some predefined values.  
These predefined values are indexed with integer keys  
defined as constants in `lua.h`.  
The following constants are defined:

<ul>

<li><b><a name="pdf-LUA\_RIDX\_MAINTHREAD"><code>LUA\_RIDX\_MAINTHREAD</code></a>: </b> At this index the registry has  
the main thread of the state.  
(The main thread is the one created together with the state.)  
</li>

<li><b><a name="pdf-LUA\_RIDX\_GLOBALS"><code>LUA\_RIDX\_GLOBALS</code></a>: </b> At this index the registry has  
the global environment.  
</li>  
</ul>

## <h2>4.6 &ndash; <a name="4.6">Error Handling in C</a></h2>

<p>

Internally, Lua uses the C `longjmp` facility to handle errors.

(You can also choose to use exceptions if you compile Lua as C++;  
search for `LUAI_THROW` in the source code.)

When Lua faces any error

(such as a memory allocation error, type errors, syntax errors,  
and runtime errors)

it *raises* an error;

that is, it does a long jump.

A *protected environment* uses `setjmp`  
to set a recovery point;  
any error jumps to the most recent active recovery point.

<p>

If an error happens outside any protected environment,  
Lua calls a *panic function* (see <a  
href="#lua\_atpanic"><code>lua\_atpanic</code></a>)  
and then calls `abort`,  
thus exiting the host application.  
Your panic function can avoid this exit by  
never returning

(e.g., doing a long jump to your own recovery point outside Lua).

<p>

The panic function runs as if it were a message handler (see [§2.3](#2.3)); in particular, the error message is at the top of the stack. However, there is no guarantees about stack space. To push anything on the stack, the panic function should first check the available space (see [§4.2](#4.2)).

<p>

Most functions in the API can throw an error, for instance due to a memory allocation error. The documentation for each function indicates whether it can throw errors.

<p>

Inside a C function you can throw an error by calling [`lua\_error`](#lua_error).

## <h2>4.7 &ndash;

<p>

Internally, Lua uses the C `longjmp` facility to yield a coroutine.

Therefore, if a function `foo` calls an API function and this API function yields (directly or indirectly by calling another function that yields), Lua cannot return to `foo` any more, because the `longjmp` removes its frame from the C stack.

<p>

To avoid this kind of problem, Lua raises an error whenever it tries to yield across an API call, except for three functions: [`lua\_yieldk`](#lua_yieldk), [`lua\_callk`](#lua_callk), and [`lua\_pcallk`](#lua_pcallk). All those functions receive a *continuation function* (as a parameter called `k`) to continue execution after a yield.

<p>

We need to set some terminology to explain continuations.

We have a C function called from Lua which we will call the *original function*.

This original function then calls one of those three functions in the C API,

which we will call the *callee function*, that then yields the current thread.

(This can happen when the callee function is [<code>lua\\_yieldk</code>](#lua_yieldk),

or when the callee function is either [<code>lua\\_callk</code>](#lua_callk) or [<code>lua\\_pcallk</code>](#lua_pcallk)

and the function called by them yields.)

and the function called by them yields.)

and the function called by them yields.)

and the function called by them yields.)

<p>

Suppose the running thread yields while executing the callee function.

After the thread resumes,

it eventually will finish running the callee function.

However,

the callee function cannot return to the original function,

because its frame in the C stack was destroyed by the yield.

Instead, Lua calls a *continuation function*,

which was given as an argument to the callee function.

As the name implies,

the continuation function should continue the task

of the original function.

<p>

Lua treats the continuation function as if it were the original function.

The continuation function receives the same Lua stack

from the original function,

in the same state it would be if the callee function had returned.

(For instance,

after a [<code>lua\\_callk</code>](#lua_callk) the function

and its arguments are

removed from the stack and replaced by the results from the call.)

It also has the same upvalues.

Whatever it returns is handled by Lua as if it were the return

of the original function.

<p>

The only difference in the Lua state between the original function

and its continuation is the result of a call to [lua\\_callk](#)

[<code>lua\\_getctx</code></a>.](#lua_getctx)

## 4.8 &ndash; Functions and Types

<p>

Here we list all functions and types from the C API in alphabetical order.

Each function has an indicator like this:

[-o, +p, *x*]

<p>

The first field, `o`,

is how many elements the function pops from the stack.

The second field, `p`,

is how many elements the function pushes onto the stack.

(Any function always pushes its results after popping its arguments.)

A field in the form `x|y` means the function can push (or pop)

`x` or `y` elements,

depending on the situation;

an interrogation mark '`?`' means that

we cannot know how many elements the function pops/pushes

by looking only at its arguments

(e.g., they may depend on what is on the stack).

The third field, `x`,

tells whether the function may throw errors:

'`-`' means the function never throws any error;

'`e`' means the function may throw errors;

'`v`' means the function may throw an error on purpose.

---

### <code>lua\_absindex</code></a>

[-0, +0, &ndash;]

```
int lua_absindex (lua_State *L, int idx);
```

<p>

Converts the acceptable index `idx` into an absolute index (that is, one that does not depend on the stack top).

---

### <code>lua\_Alloc</code></a>

```
<pre>typedef void * (*lua_Alloc) (void *ud,
 void *ptr,
 size_t osize,
 size_t nsize);</pre>
```

<p>

The type of the memory-allocation function used by Lua states.

The allocator function must provide a functionality similar to `realloc`, but not exactly the same.

Its arguments are

`ud`, an opaque pointer passed to [`lua\_newstate`](#lua_newstate);

`ptr`, a pointer to the block being allocated/reallocated/freed;

`osize`, the original size of the block or some code about what

is being allocated;

`nsize`, the new size of the block.

<p>

When `ptr` is not `NULL`,

`osize` is the size of the block pointed by `ptr`, that is,

the size given when it was allocated or reallocated.

<p>

When `ptr` is `NULL`,

`osize` encodes the kind of object that Lua is allocating.

`osize` is any of

[`LUA\_TSTRING`](#pdf-LUA_TSTRING), [`LUA\_TTABLE`](#pdf-LUA_TTABLE), [`LUA\_TFUNCTION`](#pdf-LUA_TFUNCTION),

[`LUA\_TUSERDATA`](#pdf-LUA_TUSERDATA), or [`LUA\_TTHREAD`](#pdf-LUA_TTHREAD) when (and only

when)

Lua is creating a new object of that type.

When `osize` is some other value,

Lua is allocating memory for something else.

<p>

Lua assumes the following behavior from the allocator function:

<p>

When `nsize` is zero,

the allocator should behave like `free`

and return `NULL`.

<p>

When `nsiz` is not zero,  
the allocator should behave like `realloc`.  
The allocator returns `NULL`  
if and only if it cannot fulfill the request.  
Lua assumes that the allocator never fails when  
`osiz >= nsiz`.

<p>

Here is a simple implementation for the allocator function.  
It is used in the auxiliary library by [`luaL\_newstate`](#luaL_newstate).

<pre>

```
static void *l_alloc (void *ud, void *ptr, size_t osiz,
 size_t nsiz) {
 (void)ud; (void)osiz; /* not used */
 if (nsiz == 0) {
 free(ptr);
 return NULL;
 }
 else
 return realloc(ptr, nsiz);
}
```

</pre><p>

Note that Standard C ensures  
that `free(NULL)` has no effect and that  
`realloc(NULL, size)` is equivalent to `malloc(size)`.

This code assumes that `realloc` does not fail when  
shrinking a block.

(Although Standard C does not ensure this behavior,  
it seems to be a safe assumption.)

---

### <a name="lua\_arith">`lua_arith`</a></h3><p>

<span class="apii">[-(2|1), +1, *e*]</span>

<pre>void lua\_arith (lua\_State \*L, int op);</pre>

<p>

Performs an arithmetic operation over the two values  
(or one, in the case of negation)  
at the top of the stack,

with the value at the top being the second operand, pops these values, and pushes the result of the operation. The function follows the semantics of the corresponding Lua operator (that is, it may call metamethods).

<p>

The value of <code>op</code> must be one of the following constants:

<ul>

<li><b><a name="pdf-LUA\_OPADD"><code>LUA\_OPADD</code></a>: </b> performs addition (<code>+</code>)</li>  
<li><b><a name="pdf-LUA\_OPSUB"><code>LUA\_OPSUB</code></a>: </b> performs subtraction (<code>-</code>)</li>  
<li><b><a name="pdf-LUA\_OPMUL"><code>LUA\_OPMUL</code></a>: </b> performs multiplication (<code>\*</code>)</li>  
<li><b><a name="pdf-LUA\_OPDIV"><code>LUA\_OPDIV</code></a>: </b> performs division (<code>/</code>)</li>  
<li><b><a name="pdf-LUA\_OPMOD"><code>LUA\_OPMOD</code></a>: </b> performs modulo (<code>%</code>)</li>  
<li><b><a name="pdf-LUA\_OPPOW"><code>LUA\_OPPOW</code></a>: </b> performs exponentiation (<code>^</code>)</li>  
<li><b><a name="pdf-LUA\_OPUNM"><code>LUA\_OPUNM</code></a>: </b> performs mathematical negation (unary <code>-</code>)</li>

</ul>

<hr><h3><a name="lua\_atpanic"><code>lua\_atpanic</code></a></h3><p>  
<span class="apii">[-0, +0, &ndash;]</span>  
<pre>lua\_CFunction lua\_atpanic (lua\_State \*L, lua\_CFunction panicf);</pre>

<p>

Sets a new panic function and returns the old one (see <a href="#4.6">&sect;4.6</a>).

<hr><h3><a name="lua\_call"><code>lua\_call</code></a></h3><p>  
<span class="apii">[-(nargs+1), +nresults, <em>e</em>]</span>  
<pre>void lua\_call (lua\_State \*L, int nargs, int nresults);</pre>

<p>

Calls a function.

<p>

To call a function you must use the following protocol:  
first, the function to be called is pushed onto the stack;  
then, the arguments to the function are pushed  
in direct order;  
that is, the first argument is pushed first.  
Finally you call [<code>lua\\_call</code></a>;  
<code>nargs</code> is the number of arguments that you pushed onto the  
stack.  
All arguments and the function value are popped from the stack  
when the function is called.  
The function results are pushed onto the stack when the function  
returns.  
The number of results is adjusted to <code>nresults</code>,  
unless <code>nresults</code> is \[pdf-LUA\\\_MULTRET\]\(#\)<code>LUA\\_MULTRET</code></a>.  
In this case, all results from the function are pushed.  
Lua takes care that the returned values fit into the stack space.  
The function results are pushed onto the stack in direct order  
\(the first result is pushed first\),  
so that after the call the last result is on the top of the stack.](#lua_call)

<p>

Any error inside the called function is propagated upwards  
(with a <code>longjmp</code>).

<p>

The following example shows how the host program can do the  
equivalent to this Lua code:

<pre>

```
 a = f("how", t.x, 14)
```

</pre><p>

Here it is in C:

<pre>

```
 lua_getglobal(L, "f"); /* function to be called
*/
 lua_pushstring(L, "how"); /* 1st argument
*/
 lua_getglobal(L, "t"); /* table to be indexed
*/
 lua_getfield(L, -1, "x"); /* push result of t.x (2nd arg)
*/
 lua_remove(L, -2); /* remove 't' from the stack
*/
```

```

 lua_pushinteger(L, 14); /* 3rd argument
*/
 lua_call(L, 3, 1); /* call 'f' with 3 arguments and 1 result
*/
 lua_setglobal(L, "a"); /* set global 'a'
*/
</pre><p>

```

Note that the code above is "balanced":  
at its end, the stack is back to its original configuration.  
This is considered good programming practice.

---

### <a name="lua\_callk"><code>lua\_callk</code></a></h3><p> <span class="apii">[-(nargs + 1), +nresults, <em>e</em>]</span> <pre>void lua\_callk (lua\_State \*L, int nargs, int nresults, int ctx, lua\_CFunction k);</pre>

<p>
This function behaves exactly like <a href="#lua\_call"><code>lua\_call</code></a>, but allows the called function to yield (see <a href="#4.7">&sect;4.7</a>).

---

### <a name="lua\_CFunction"><code>lua\_CFunction</code></a></h3> <pre>typedef int (\*lua\_CFunction) (lua\_State \*L);</pre>

<p>
Type for C functions.

<p>
In order to communicate properly with Lua, a C function must use the following protocol, which defines the way parameters and results are passed: a C function receives its arguments from Lua in its stack in direct order (the first argument is pushed first). So, when the function starts, <code>lua\_gettop(L)</code> returns the number of arguments received by the function. The first argument (if any) is at index 1 and its last argument is at index <code>lua\_gettop(L)</code>. To return values to Lua, a C function just pushes them onto the stack,

in direct order (the first result is pushed first), and returns the number of results. Any other value in the stack below the results will be properly discarded by Lua. Like a Lua function, a C function called by Lua can also return many results.

<p>

As an example, the following function receives a variable number of numerical arguments and returns their average and sum:

<pre>

```
static int foo (lua_State *L) {
 int n = lua_gettop(L); /* number of arguments */
 lua_Number sum = 0;
 int i;
 for (i = 1; i <= n; i++) {
 if (!lua_isnumber(L, i)) {
 lua_pushstring(L, "incorrect argument");
 lua_error(L);
 }
 sum += lua_tonumber(L, i);
 }
 lua_pushnumber(L, sum/n); /* first result */
 lua_pushnumber(L, sum); /* second result */
 return 2; /* number of results */
}
```

</pre>

<hr><h3><a name="lua\_checkstack"><code>lua\_checkstack</code></a></h3><p>

<span class="apii">[-0, +0, &ndash;]</span>

<pre>int lua\_checkstack (lua\_State \*L, int extra);</pre>

<p>

Ensures that there are at least <code>extra</code> free stack slots in the stack.

It returns false if it cannot fulfill the request, because it would cause the stack to be larger than a fixed maximum size

(typically at least a few thousand elements) or because it cannot allocate memory for the new stack size.

This function never shrinks the stack; if the stack is already larger than the new size, it is left unchanged.

---

### [lua\\_close](#)

[-0, +0, &dash;]  

```
void lua_close (lua_State *L);
```

Destroys all objects in the given Lua state (calling the corresponding garbage-collection metamethods, if any) and frees all dynamic memory used by this state. On several platforms, you may not need to call this function, because all resources are naturally released when the host program ends. On the other hand, long-running programs that create multiple states, such as daemons or web servers, might need to close states as soon as they are not needed.

---

### [lua\\_compare](#)

[-0, +0, *e*]  

```
int lua_compare (lua_State *L, int index1, int index2, int op);
```

Compares two Lua values. Returns 1 if the value at index `index1` satisfies `op` when compared with the value at index `index2`, following the semantics of the corresponding Lua operator (that is, it may call metamethods). Otherwise returns 0. Also returns 0 if any of the indices is non valid.

The value of `op` must be one of the following constants:

- [LUA\\_OPEQ](#)**: compares for equality (`==`)
- [LUA\\_OPLT](#)**: compares for less than (`<`)
- [LUA\\_OPLE](#)**: compares for less or equal (`<=`)

</ul>

---

### <a name="lua\_concat"><code>lua\_concat</code></a></h3><p> <span class="apii">[-n, +1, <em>e</em>]</span> <pre>void lua\_concat (lua\_State \*L, int n);</pre>

<p>  
Concatenates the <code>n</code> values at the top of the stack,  
pops them, and leaves the result at the top.  
If <code>n</code> is 1, the result is the single value on  
the stack  
(that is, the function does nothing);  
if <code>n</code> is 0, the result is the empty string.  
Concatenation is performed following the usual semantics of Lua  
(see <a href="#3.4.5">§3.4.5</a>).

---

### <a name="lua\_copy"><code>lua\_copy</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>void lua\_copy (lua\_State \*L, int fromidx, int toidx);</pre>

<p>  
Moves the element at index <code>fromidx</code>  
into the valid index <code>toidx</code>  
without shifting any element  
(therefore replacing the value at that position).

---

### <a name="lua\_createtable"><code>lua\_createtable</code></a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>void lua\_createtable (lua\_State \*L, int narr, int nrec);</pre>

<p>  
Creates a new empty table and pushes it onto the stack.  
Parameter <code>narr</code> is a hint for how many elements the table  
will have as a sequence;  
parameter <code>nrec</code> is a hint for how many other elements  
the table will have.  
Lua may use these hints to preallocate memory for the new table.

This pre-allocation is useful for performance when you know in advance how many elements the table will have.  
Otherwise you can use the function [<code>lua\\_newtable</code></a>.](#lua_newtable)

---

### <code>lua\_dump</code></a></h3><p> <span class="apii">[-0, +0, <em>e</em>]</span> <pre>int lua\_dump (lua\_State \*L, lua\_Writer writer, void \*data);</pre>

<p>  
Dumps a function as a binary chunk.  
Receives a Lua function on the top of the stack  
and produces a binary chunk that,  
if loaded again,  
results in a function equivalent to the one dumped.  
As it produces parts of the chunk,  
<a href="#lua\_dump"><code>lua\_dump</code></a> calls function  
<code>writer</code> (see <a href="#lua\_Writer"><code>lua\_Writer</code></a>  
<code></code>)</a>  
with the given <code>data</code>  
to write them.

<p>  
The value returned is the error code returned by the last  
call to the writer;  
0&nbsp;means no errors.

<p>  
This function does not pop the Lua function from the stack.

---

### <code>lua\_error</code></a></h3><p> <span class="apii">[-1, +0, <em>v</em>]</span> <pre>int lua\_error (lua\_State \*L);</pre>

<p>  
Generates a Lua error.  
The error message (which can actually be a Lua value of any type)  
must be on the stack top.  
This function does a long jump,  
and therefore never returns

(see [<code>luaL\\_error</code>](#luaL_error)).

---

### <code>lua\_gc</code>

[-0, +0, <em>e</em>]

```
int lua_gc (lua_State *L, int what, int data);
```

Controls the garbage collector.

This function performs several tasks, according to the value of the parameter `what`:

- `LUA_GCSTOP`:** stops the garbage collector.
- `LUA_GCRESTART`:** restarts the garbage collector.
- `LUA_GCCOLLECT`:** performs a full garbage-collection cycle.
- `LUA_GCCOUNT`:** returns the current amount of memory (in Kbytes) in use by Lua.
- `LUA_GCCOUNTB`:** returns the remainder of dividing the current amount of bytes of memory in use by Lua by 1024.
- `LUA_GCSTEP`:** performs an incremental step of garbage collection. The step "size" is controlled by `data` (larger values mean more steps) in a non-specified way. If you want to control the step size you must experimentally tune the value of `data`. The function returns 1 if the step finished a garbage-collection cycle.

- `LUA_GCSETPAUSE`**:  
sets `data` as the new value for the *pause* of the collector (see [\).  
The function returns the previous value of the pause.](#2.5)

- `LUA_GCSETSTEPMUL`**:  
sets `data` as the new value for the *step multiplier* of the collector (see [\).  
The function returns the previous value of the step multiplier.](#2.5)

- `LUA_GCISRUNNING`**:  
returns a boolean that tells whether the collector is running (i.e., not stopped).

- `LUA_GCGEN`**:  
changes the collector to generational mode (see [\).](#2.5)

- `LUA_GCINC`**:  
changes the collector to incremental mode.  
This is the default mode.

For more details about these options, see [<code>collectgarbage</code>](#pdf-collectgarbage).

---

### [lua\\_getallocf](#)

[-0, +0, &ndash;]  

```
lua_Alloc lua_getallocf (lua_State *L, void **ud);
```

Returns the memory-allocation function of a given state.  
If `ud` is not `NULL`, Lua stores in `*ud` the opaque pointer passed to [<code>lua\\_newstate</code>](#lua_newstate).

---

### [lua\\_getctx](#)

[-0, +0, &dash;]

```
int lua_getctx (lua_State *L, int *ctx);
```

This function is called by a continuation function (see [4.7](#)) to retrieve the status of the thread and a context information.

When called in the original function, [lua\\_getctx](#) always returns [LUA\\_OK](#) and does not change the value of its argument `ctx`. When called inside a continuation function, [lua\\_getctx](#) returns [LUA\\_YIELD](#) and sets the value of `ctx` to be the context information (the value passed as the `ctx` argument to the callee together with the continuation function).

When the callee is [lua\\_pcallk](#), Lua may also call its continuation function to handle errors during the call. That is, upon an error in the function called by [lua\\_pcallk](#), Lua may not return to the original function but instead may call the continuation function. In that case, a call to [lua\\_getctx](#) will return the error code (the value that would be returned by [lua\\_pcallk](#)); the value of `ctx` will be set to the context information, as in the case of a yield.

---

### [lua\\_getfield](#)

[-0, +1, *e*]

```
void lua_getfield (lua_State *L, int index, const char *k);
```

<p>

Pushes onto the stack the value `t[k]`,  
where `t` is the value at the given index.  
As in Lua, this function may trigger a metamethod  
for the "index" event (see [§2.4](#2.4)).

---

### <a name="lua\_getglobal"><code>lua\_getglobal</code></a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>void lua\_getglobal (lua\_State \*L, const char \*name);</pre>

<p>

Pushes onto the stack the value of the global `name`.

---

### <a name="lua\_getmetatable"><code>lua\_getmetatable</code></a></h3><p> <span class="apii">[-0, +(0|1), &ndash;]</span> <pre>int lua\_getmetatable (lua\_State \*L, int index);</pre>

<p>

Pushes onto the stack the metatable of the value at the given index.  
If the value does not have a metatable,  
the function returns&nbsp;0 and pushes nothing on the stack.

---

### <a name="lua\_gettable"><code>lua\_gettable</code></a></h3><p> <span class="apii">[-1, +1, <em>e</em>]</span> <pre>void lua\_gettable (lua\_State \*L, int index);</pre>

<p>

Pushes onto the stack the value `t[k]`,  
where `t` is the value at the given index  
and `k` is the value at the top of the stack.

<p>

This function pops the key from the stack  
(putting the resulting value in its place).  
As in Lua, this function may trigger a metamethod

for the "index" event (see [§2.4](#2.4)).

---

### <code>lua\_gettop</code>

[-0, +0, &ndash;]  

```
int lua_gettop (lua_State *L);
```

Returns the index of the top element in the stack.  
Because indices start at 1,  
this result is equal to the number of elements in the stack  
(and so 0 means an empty stack).

---

### <code>lua\_getuservalue</code>

[-0, +1, &ndash;]  

```
void lua_getuservalue (lua_State *L, int index);
```

Pushes onto the stack the Lua value associated with the userdata  
at the given index.  
This Lua value must be a table or **nil**.

---

### <code>lua\_insert</code>

[-1, +1, &ndash;]  

```
void lua_insert (lua_State *L, int index);
```

Moves the top element into the given valid index,  
shifting up the elements above this index to open space.  
This function cannot be called with a pseudo-index,  
because a pseudo-index is not an actual stack position.

---

### <code>lua\_Integer</code>

```
typedef ptrdiff_t lua_Integer;
```

<p>

The type used by the Lua API to represent signed integral values.

<p>

By default it is a <code>ptrdiff\_t</code>, which is usually the largest signed integral type the machine handles "comfortably".

---

### <a name="lua\_isboolean"><code>lua\_isboolean</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>int lua\_isboolean (lua\_State \*L, int index);</pre>

<p>

Returns 1 if the value at the given index is a boolean, and 0&nbsp;otherwise.

---

### <a name="lua\_iscfunction"><code>lua\_iscfunction</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>int lua\_iscfunction (lua\_State \*L, int index);</pre>

<p>

Returns 1 if the value at the given index is a C&nbsp;function, and 0&nbsp;otherwise.

---

### <a name="lua\_isfunction"><code>lua\_isfunction</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>int lua\_isfunction (lua\_State \*L, int index);</pre>

<p>

Returns 1 if the value at the given index is a function (either C or Lua), and 0&nbsp;otherwise.

---

### [lua\\_islightuserdata](#)

[-0, +0, &ndash;]

```
int lua_islightuserdata (lua_State *L, int index);
```

Returns 1 if the value at the given index is a light userdata, and 0 otherwise.

---

### [lua\\_isnil](#)

[-0, +0, &ndash;]

```
int lua_isnil (lua_State *L, int index);
```

Returns 1 if the value at the given index is **nil**, and 0 otherwise.

---

### [lua\\_isnone](#)

[-0, +0, &ndash;]

```
int lua_isnone (lua_State *L, int index);
```

Returns 1 if the given index is not valid, and 0 otherwise.

---

### [lua\\_isnoneornil](#)

[-0, +0, &ndash;]

```
int lua_isnoneornil (lua_State *L, int index);
```

Returns 1 if the given index is not valid or if the value at this index is **nil**, and 0 otherwise.

---

### [lua\\_isnumber](#)

[-0, +0, &ndash;]  

```
int lua_isnumber (lua_State *L, int index);
```

Returns 1 if the value at the given index is a number or a string convertible to a number, and 0 otherwise.

---

### [lua\\_isstring](#)

[-0, +0, &ndash;]  

```
int lua_isstring (lua_State *L, int index);
```

Returns 1 if the value at the given index is a string or a number (which is always convertible to a string), and 0 otherwise.

---

### [lua\\_istable](#)

[-0, +0, &ndash;]  

```
int lua_istable (lua_State *L, int index);
```

Returns 1 if the value at the given index is a table, and 0 otherwise.

---

### [lua\\_isthread](#)

[-0, +0, &ndash;]  

```
int lua_isthread (lua_State *L, int index);
```

Returns 1 if the value at the given index is a thread, and 0 otherwise.

---

### [lua\\_isuserdata](#)

[-0, +0, &dash;]

```
int lua_isuserdata (lua_State *L, int index);
```

Returns 1 if the value at the given index is a userdata (either full or light), and 0 otherwise.

---

### [lua\\_len](#)

[-0, +1, *e*]

```
void lua_len (lua_State *L, int index);
```

Returns the "length" of the value at the given index; it is equivalent to the '`#`' operator in Lua (see [§3.4.6](#)).

The result is pushed on the stack.

---

### [lua\\_load](#)

[-0, +1, &dash;]

```
int lua_load (lua_State *L,
 lua_Reader reader,
 void *data,
 const char *source,
 const char *mode);
```

Loads a Lua chunk (without running it).

If there are no errors,

`lua_load` pushes the compiled chunk as a Lua function on top of the stack.

Otherwise, it pushes an error message.

The return values of `lua_load` are:

**<li><b><a href="#pdf-LUA\_OK"><code>LUA\_OK</code></a>: </b> no errors;</li>**

**<li><b><a name="pdf-LUA\_ERRSYNTAX"><code>LUA\_ERRSYNTAX</code></a>: </b> syntax error during precompilation;</li>**

**<li><b><a href="#pdf-LUA\_ERRMEM"><code>LUA\_ERRMEM</code></a>: </b> memory allocation error;</li>**

**<li><b><a href="#pdf-LUA\_ERRGCMM"><code>LUA\_ERRGCMM</code></a>: </b> error while running a <code>\_\_gc</code> metamethod.  
(This error has no relation with the chunk being loaded.  
It is generated by the garbage collector.)  
</li>**

**</ul>**

**<p>**  
The <code>lua\_load</code> function uses a user-supplied <code>reader</code> function to read the chunk (see <a href="#lua\_Reader"><code>lua\_Reader</code></a>).  
The <code>data</code> argument is an opaque value passed to the reader function.

**<p>**  
The <code>source</code> argument gives a name to the chunk, which is used for error messages and in debug information (see <a href="#4.9">&sect;4.9</a>).

**<p>**  
<code>lua\_load</code> automatically detects whether the chunk is text or binary and loads it accordingly (see program <code>luac</code>).  
The string <code>mode</code> works as in function <a href="#pdf-load"><code>load</code></a>, with the addition that a <code>NULL</code> value is equivalent to the string "<code>bt</code>".

**<p>**  
<code>lua\_load</code> uses the stack internally, so the reader function should always leave the stack unmodified when returning.

<p>

If the resulting function has one upvalue,  
this upvalue is set to the value of the global environment  
stored at index `LUA_RIDX_GLOBALS` in the registry (see [§4.5](#4.5)).

When loading main chunks,

this upvalue will be the `_ENV` variable (see [§2.2](#2.2)).

---

### `lua_newstate`

[-0, +0, &ndash;]

```
lua_State *lua_newstate (lua_Alloc f, void *ud);
```

<p>

Creates a new thread running in a new, independent state.

Returns `NULL` if cannot create the thread or the state  
(due to lack of memory).

The argument `f` is the allocator function;

Lua does all memory allocation for this state through this function.

The second argument, `ud`, is an opaque pointer that Lua  
passes to the allocator in every call.

---

### `lua_newtable`

[-0, +1, *e*]

```
void lua_newtable (lua_State *L);
```

<p>

Creates a new empty table and pushes it onto the stack.

It is equivalent to `lua_createtable(L, 0, 0)`.

---

### `lua_newthread`

[-0, +1, *e*]

```
lua_State *lua_newthread (lua_State *L);
```

<p>

Creates a new thread, pushes it on the stack,

and returns a pointer to a [`lua\_State`](#lua_State)

`</a>` that represents this new thread.  
The new thread returned by this function shares with the original thread  
its global environment,  
but has an independent execution stack.

`<p>`  
There is no explicit function to close or to destroy a thread.  
Threads are subject to garbage collection,  
like any Lua object.

`<hr><h3><a name="lua_newuserdata"><code>lua_newuserdata</code></a></h3><p>`  
`<span class="apii">[-0, +1, <em>e</em>]</span>`  
`<pre>void *lua_newuserdata (lua_State *L, size_t size);</pre>`

`<p>`  
This function allocates a new block of memory with the given size,  
pushes onto the stack a new full userdata with the block address,  
and returns this address.  
The host program can freely use this memory.

`<hr><h3><a name="lua_next"><code>lua_next</code></a></h3><p>`  
`<span class="apii">[-1, +(2|0), <em>e</em>]</span>`  
`<pre>int lua_next (lua_State *L, int index);</pre>`

`<p>`  
Pops a key from the stack,  
and pushes a key&ndash;value pair from the table at the given index  
(the "next" pair after the given key).  
If there are no more elements in the table,  
then `<a href="#lua_next"><code>lua_next</code></a>` returns 0 (and  
pushes nothing).

`<p>`  
A typical traversal looks like this:

`<pre>`  
`/* table is in the stack at index 't' */`  
`lua_pushnil(L); /* first key */`

```

while (lua_next(L, t) != 0) {
 /* uses 'key' (at index -2) and 'value' (at index -1) */
 printf("%s - %s\n",
 lua_typename(L, lua_type(L, -2)),
 lua_typename(L, lua_type(L, -1)));
 /* removes 'value'; keeps 'key' for next iteration */
 lua_pop(L, 1);
}

```

While traversing a table,  
 do not call `lua_tolstring`  
 directly on a key,  
 unless you know that the key is actually a string.  
 Recall that `lua_tolstring`  
 may change  
 the value at the given index;  
 this confuses the next call to `lua_next`  
 code>

See function `next` for the caveats  
 of modifying  
 the table during its traversal.

---

### [lua\\_Number](#)

```

typedef double lua_Number;

```

The type of numbers in Lua.  
 By default, it is double, but that can be changed in `luaconf.h`  
 code>.  
 Through this configuration file you can change  
 Lua to operate with another type for numbers (e.g., float or long).

---

### [lua\\_pcall](#)

[-(nargs + 1), +(nresults|1), &ndash;]  

```

int lua_pcall (lua_State *L, int nargs, int nresults, int
msggh);

```

<p>

Calls a function in protected mode.

<p>

Both `nargs` and `nresults` have the same meaning as

in [`lua\_call`](#lua_call).

If there are no errors during the call,

[`lua\_pcall`](#lua_pcall) behaves exactly like

[`lua\_call`](#lua_call).

However, if there is any error,

[`lua\_pcall`](#lua_pcall) catches it,

pushes a single value on the stack (the error message),

and returns an error code.

Like [`lua\_call`](#lua_call),

[`lua\_pcall`](#lua_pcall) always removes the function

and its arguments from the stack.

<p>

If `msg` is 0,

then the error message returned on the stack

is exactly the original error message.

Otherwise, `msg` is the stack index of a

*message handler*.

(In the current implementation, this index cannot be a pseudo-index.)

In case of runtime errors,

this function will be called with the error message

and its return value will be the message

returned on the stack by [`lua\_pcall`](#lua_pcall).

<p>

Typically, the message handler is used to add more debug

information to the error message, such as a stack traceback.

Such information cannot be gathered after the return of [`lua\_pcall`](#lua_pcall),

since by then the stack has unwound.

<p>

The [`lua\_pcall`](#lua_pcall) function returns one of the following codes

(defined in `lua.h`):

<ul>

<p>

Pops <code>n</code> elements from the stack.

---

### <a name="lua\_pushboolean"><code>lua\_pushboolean</code></a></h3><p>

<span class="apii">[-0, +1, &ndash;]</span>

<pre>void lua\_pushboolean (lua\_State \*L, int b);</pre>

<p>

Pushes a boolean value with value <code>b</code> onto the stack.

---

### <a name="lua\_pushcclosure"><code>lua\_pushcclosure</code></a></h3><p>

<span class="apii">[-n, +1, <em>e</em>]</span>

<pre>void lua\_pushcclosure (lua\_State \*L, lua\_CFunction fn, int n);</pre>

<p>

Pushes a new C&nbsp;closure onto the stack.

<p>

When a C&nbsp;function is created, it is possible to associate some values with it, thus creating a C&nbsp;closure (see <a href="#4.4">&sect;4.4</a>); these values are then accessible to the function whenever it is called.

To associate values with a C&nbsp;function, first these values should be pushed onto the stack (when there are multiple values, the first value is pushed first). Then <a href="#lua\_pushcclosure"><code>lua\_pushcclosure</code></a> is called to create and push the C&nbsp;function onto the stack, with the argument <code>n</code> telling how many values should be associated with the function.

<a href="#lua\_pushcclosure"><code>lua\_pushcclosure</code></a> also pops these values from the stack.

<p>

The maximum value for <code>n</code> is 255.

<p>

When `n` is zero,  
this function creates a *light C function*,  
which is just a pointer to the C function.  
In that case, it never throws a memory error.

---

### <a name="lua\_pushcfunction"><code>lua\_pushcfunction</code></a></h3><p>

<span class="apii">[-0, +1, &ndash;]</span>

```
<pre>void lua_pushcfunction (lua_State *L, lua_CFunction f);</pre>
```

<p>

Pushes a C function onto the stack.  
This function receives a pointer to a C function  
and pushes onto the stack a Lua value of type `function`  
that,  
when called, invokes the corresponding C function.

<p>

Any function to be registered in Lua must  
follow the correct protocol to receive its parameters  
and return its results (see [<code>lua\\_CFunction</code>](#lua_CFunction)).

<p>

`lua_pushcfunction` is defined as a macro:

<pre>

```
 #define lua_pushcfunction(L,f) lua_pushcclosure(L,f,0)
```

</pre><p>

Note that `f` is used twice.

---

### <a name="lua\_pushfstring"><code>lua\_pushfstring</code></a></h3><p>

<span class="apii">[-0, +1, *e*]</span>

```
<pre>const char *lua_pushfstring (lua_State *L, const char
*fmt, ...);</pre>
```

<p>

Pushes onto the stack a formatted string

and returns a pointer to this string.  
It is similar to the ISO C function `sprintf`,  
but has some important differences:

- 

- 

You do not have to allocate space for the result:  
the result is a Lua string and Lua takes care of memory allocation  
(and deallocation, through garbage collection).

- 
- 

The conversion specifiers are quite restricted.

There are no flags, widths, or precisions.

The conversion specifiers can only be

'`%`' (inserts a '`%`' in the string),

'`s`' (inserts a zero-terminated string, with no size  
restrictions),

'`f`' (inserts a [`lua\_Number`](#lua_Number)),

'`p`' (inserts a pointer as a hexadecimal numeral),

'`d`' (inserts an `int`), and

'`c`' (inserts an `int` as a byte).

- 

---

### [lua\\_pushglobaltable](#)

[-0, +1, &ndash;]

```
void lua_pushglobaltable (lua_State *L);
```

Pushes the global environment onto the stack.

---

### [lua\\_pushinteger](#)

[-0, +1, &ndash;]

```
void lua_pushinteger (lua_State *L, lua_Integer n);
```

Pushes a number with value `n` onto the stack.

---

### [lua\\_pushlightuserdata](#)

`lua_pushlightuserdata`

`void lua_pushlightuserdata (lua_State *L, void *p);`

Pushes a light userdata onto the stack.

Userdata represent C values in Lua.  
A *light userdata* represents a pointer, a `void*`.  
It is a value (like a number):  
you do not create it, it has no individual metatable,  
and it is not collected (as it was never created).  
A light userdata is equal to "any"  
light userdata with the same C address.

---

### [lua\\_pushliteral](#)

`lua_pushliteral`

`const char *lua_pushliteral (lua_State *L, const char *s);`

This macro is equivalent to `lua_pushlstring`,  
but can be used only when `s` is a literal string.  
It automatically provides the string length.

---

### [lua\\_pushlstring](#)

`lua_pushlstring`

`const char *lua_pushlstring (lua_State *L, const char *s, size_t len);`

Pushes the string pointed to by `s` with size `len`

`>`  
onto the stack.  
Lua makes (or reuses) an internal copy of the given string,  
so the memory at `s` can be freed or reused immediately  
after  
the function returns.  
The string can contain any binary data,  
including embedded zeros.

`<`  
Returns a pointer to the internal copy of the string.

---

### [`lua\_pushnil`](#)

[-0, +1, &ndash;]  

```
void lua_pushnil (lua_State *L);
```

`<`  
Pushes a nil value onto the stack.

---

### [`lua\_pushnumber`](#)

[-0, +1, &ndash;]  

```
void lua_pushnumber (lua_State *L, lua_Number n);
```

`<`  
Pushes a number with value `n` onto the stack.

---

### [`lua\_pushstring`](#)

[-0, +1, *e*]  

```
const char *lua_pushstring (lua_State *L, const char *s);
```

`<`  
Pushes the zero-terminated string pointed to by `s`  
onto the stack.  
Lua makes (or reuses) an internal copy of the given string,  
so the memory at `s` can be freed or reused immediately

after  
the function returns.

<p>  
Returns a pointer to the internal copy of the string.

<p>  
If <code>s</code> is <code>NULL</code>, pushes <b>nil</b> and returns  
<code>NULL</code>.

<hr><h3><a name="lua\_pushthread"><code>lua\_pushthread</code></a></h3><p>  
<span class="apii">[-0, +1, &ndash;]</span>  
<pre>int lua\_pushthread (lua\_State \*L);</pre>

<p>  
Pushes the thread represented by <code>L</code> onto the stack.  
Returns 1 if this thread is the main thread of its state.

<hr><h3><a name="lua\_pushunsigned"><code>lua\_pushunsigned</code></a></h3><p>  
<span class="apii">[-0, +1, &ndash;]</span>  
<pre>void lua\_pushunsigned (lua\_State \*L, lua\_Unsigned n);</pre>

<p>  
Pushes a number with value <code>n</code> onto the stack.

<hr><h3><a name="lua\_pushvalue"><code>lua\_pushvalue</code></a></h3><p>  
<span class="apii">[-0, +1, &ndash;]</span>  
<pre>void lua\_pushvalue (lua\_State \*L, int index);</pre>

<p>  
Pushes a copy of the element at the given index  
onto the stack.

---

### [lua\\_pushvfstring](#)

[-0, +1, *e*]  

```
const char *lua_pushvfstring (lua_State *L,
 const char *fmt,
 va_list argp);
```

Equivalent to [lua\\_pushfstring](#), except that it receives a `va_list` instead of a variable number of arguments.

---

### [lua\\_rawequal](#)

[-0, +0, &dash;]  

```
int lua_rawequal (lua_State *L, int index1, int index2);
```

Returns 1 if the two values in indices `index1` and `index2` are primitively equal (that is, without calling metamethods). Otherwise returns `0`. Also returns `0` if any of the indices are non valid.

---

### [lua\\_rawget](#)

[-1, +1, &dash;]  

```
void lua_rawget (lua_State *L, int index);
```

Similar to [lua\\_gettable](#), but does a raw access (i.e., without metamethods).

---

### [lua\\_rawgeti](#)

[-0, +1, &dash;]  

```
void lua_rawgeti (lua_State *L, int index, int n);
```

<p>

Pushes onto the stack the value `t[n]`,  
where `t` is the table at the given index.  
The access is raw;  
that is, it does not invoke metamethods.

---

### <a name="lua\_rawgetp"><code>lua\_rawgetp</code></a></h3><p> <span class="apii">[-0, +1, &ndash;]</span> <pre>void lua\_rawgetp (lua\_State \*L, int index, const void \*p);</pre>

<p>

Pushes onto the stack the value `t[k]`,  
where `t` is the table at the given index and  
`k` is the pointer `p` represented as a light  
userdata.  
The access is raw;  
that is, it does not invoke metamethods.

---

### <a name="lua\_rawlen"><code>lua\_rawlen</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>size\_t lua\_rawlen (lua\_State \*L, int index);</pre>

<p>

Returns the raw "length" of the value at the given index:  
for strings, this is the string length;  
for tables, this is the result of the length operator ('`#`')

with no metamethods;  
for userdata, this is the size of the block of memory allocated  
for the userdata;  
for other values, it is&nbsp;0.

---

### <a name="lua\_rawset"><code>lua\_rawset</code></a></h3><p> <span class="apii">[-2, +0, *e*]</span> <pre>void lua\_rawset (lua\_State \*L, int index);</pre>

<p>

Similar to [`lua\_settable`](#lua_settable), but does a raw assignment (i.e., without metamethods).

---

### `lua_rawseti`

[-1, +0, *e*]

```
void lua_rawseti (lua_State *L, int index, int n);
```

Does the equivalent of `t[n] = v`, where `t` is the table at the given index and `v` is the value at the top of the stack.

This function pops the value from the stack. The assignment is raw; that is, it does not invoke metamethods.

---

### `lua_rawsetp`

[-1, +0, *e*]

```
void lua_rawsetp (lua_State *L, int index, const void *p);
```

Does the equivalent of `t[k] = v`, where `t` is the table at the given index, `k` is the pointer `p` represented as a light userdata, and `v` is the value at the top of the stack.

This function pops the value from the stack. The assignment is raw; that is, it does not invoke metamethods.

---

### `lua_Reader`

```
typedef const char * (*lua_Reader) (lua_State *L,
```

```
void *data,
size_t *size);</pre>
```

<p>

The reader function used by <a href="#lua\_load"><code>lua\_load</code></a>.

Every time it needs another piece of the chunk,

<a href="#lua\_load"><code>lua\_load</code></a> calls the reader, passing along its <code>data</code> parameter.

The reader must return a pointer to a block of memory with a new piece of the chunk

and set <code>size</code> to the block size.

The block must exist until the reader function is called again.

To signal the end of the chunk,

the reader must return <code>NULL</code> or set <code>size</code> to zero.

The reader function may return pieces of any size greater than zero.

---

### <a name="lua\_register"><code>lua\_register</code></a></h3><p>

<span class="apii">[-0, +0, <em>e</em>]</span>

```
<pre>void lua_register (lua_State *L, const char *name, lua_CFunction
f);</pre>
```

<p>

Sets the C function <code>f</code> as the new value of global <code>name</code>.

It is defined as a macro:

```
<pre>
```

```
 #define lua_register(L,n,f) \
 (lua_pushcfunction(L, f), lua_setglobal(L, n))
```

```
</pre>
```

---

### <a name="lua\_remove"><code>lua\_remove</code></a></h3><p>

<span class="apii">[-1, +0, &ndash;]</span>

```
<pre>void lua_remove (lua_State *L, int index);</pre>
```

<p>

Removes the element at the given valid index,

shifting down the elements above this index to fill the gap.

This function cannot be called with a pseudo-index,

because a pseudo-index is not an actual stack position.

---

### [lua\\_replace](#)

[-1, +0, &ndash;]

```
void lua_replace (lua_State *L, int index);
```

Moves the top element into the given valid index without shifting any element (therefore replacing the value at the given index), and then pops the top element.

---

### [lua\\_resume](#)

[-?, +?, &ndash;]

```
int lua_resume (lua_State *L, lua_State *from, int nargs);
```

Starts and resumes a coroutine in a given thread.

To start a coroutine, you push onto the thread stack the main function plus any arguments; then you call [lua\\_resume](#), with `nargs` being the number of arguments. This call returns when the coroutine suspends or finishes its execution. When it returns, the stack contains all values passed to [lua\\_yield](#), or all values returned by the body function. [lua\\_resume](#) returns [LUA\\_YIELD](#) if the coroutine yields, [LUA\\_OK](#) if the coroutine finishes its execution without errors, or an error code in case of errors (see [lua\\_pcall](#)).

In case of errors, the stack is not unwound, so you can use the debug API over it.

The error message is on the top of the stack.

<p>

To resume a coroutine,  
you remove any results from the last <a  
href="#lua\_yield"><code>lua\_yield</code></a>,  
put on its stack only the values to  
be passed as results from <code>yield</code>,  
and then call <a href="#lua\_resume"><code>lua\_resume</code></a>.

<p>

The parameter <code>from</code> represents the coroutine that is  
resuming <code>L</code>.  
If there is no such coroutine,  
this parameter can be <code>NULL</code>.

<hr><h3><a name="lua\_setallocf"><code>lua\_setallocf</code></a></h3><p>  
<span class="apii">[-0, +0, &ndash;]</span>  
<pre>void lua\_setallocf (lua\_State \*L, lua\_Alloc f, void \*ud);</pre>

<p>

Changes the allocator function of a given state to <code>f</code>  
with user data <code>ud</code>.

<hr><h3><a name="lua\_setfield"><code>lua\_setfield</code></a></h3><p>  
<span class="apii">[-1, +0, <em>e</em>]</span>  
<pre>void lua\_setfield (lua\_State \*L, int index, const char \*k);</pre>

<p>

Does the equivalent to <code>t[k] = v</code>,  
where <code>t</code> is the value at the given index  
and <code>v</code> is the value at the top of the stack.

<p>

This function pops the value from the stack.  
As in Lua, this function may trigger a metamethod  
for the "newindex" event (see <a href="#2.4">&sect;2.4</a>).

---

### [lua\\_setglobal](#)

[-1, +0, **e**]  

```
void lua_setglobal (lua_State *L, const char *name);
```

Pops a value from the stack and sets it as the new value of global `name`.

---

### [lua\\_setmetatable](#)

[-1, +0, &dash;]  

```
void lua_setmetatable (lua_State *L, int index);
```

Pops a table from the stack and sets it as the new metatable for the value at the given index.

---

### [lua\\_settable](#)

[-2, +0, **e**]  

```
void lua_settable (lua_State *L, int index);
```

Does the equivalent to `t[k] = v`, where `t` is the value at the given index, `v` is the value at the top of the stack, and `k` is the value just below the top.

This function pops both the key and the value from the stack. As in Lua, this function may trigger a metamethod for the "newindex" event (see [&sect;2.4](#)).

---

### [lua\\_settop](#)

[-?, +?, &dash;]

```
<pre>void lua_settop (lua_State *L, int index);</pre>
```

<p>

Accepts any index, or `0`,  
and sets the stack top to this index.  
If the new top is larger than the old one,  
then the new elements are filled with **`nil`**.  
If `index` is `0`, then all stack elements are removed.

---

### <a name="lua\_setuservalue"><code>lua\_setuservalue</code></a></h3><p>

<span class="apii">[-1, +0, &ndash;]</span>

```
<pre>void lua_setuservalue (lua_State *L, int index);</pre>
```

<p>

Pops a table or **`nil`** from the stack and sets it as  
the new value associated to the userdata at the given index.

---

### <a name="lua\_State"><code>lua\_State</code></a></h3><p>

```
<pre>typedef struct lua_State lua_State;</pre>
```

<p>

An opaque structure that points to a thread and indirectly  
(through the thread) to the whole state of a Lua interpreter.  
The Lua library is fully reentrant:  
it has no global variables.  
All information about a state is accessible through this structure.

<p>

A pointer to this structure must be passed as the first argument to  
every function in the library, except to [<code>lua\\_newstate</code></a>,  
which creates a Lua state from scratch.](#lua_newstate)

---

### <a name="lua\_status"><code>lua\_status</code></a></h3><p>

<span class="apii">[-0, +0, &ndash;]</span>

```
<pre>int lua_status (lua_State *L);</pre>
```

<p>

Returns the status of the thread `L`.

<p>

The status can be 0 ([`LUA\_OK`](#pdf-LUA_OK)) for a normal thread, an error code if the thread finished the execution of a [`lua\_resume`](#lua_resume) with an error, or [`LUA\_YIELD`](#pdf-LUA_YIELD) if the thread is suspended.

<p>

You can only call functions in threads with status [`LUA\_OK`](#pdf-LUA_OK).

You can resume threads with status [`LUA\_OK`](#pdf-LUA_OK)

(to start a new coroutine) or [`LUA\_YIELD`](#pdf-LUA_YIELD)

(to resume a coroutine).

---

### [`lua\_toboolean`](#lua_toboolean)

[-0, +0, &ndash;]

```
int lua_toboolean (lua_State *L, int index);
```

<p>

Converts the Lua value at the given index to a C boolean value (0 or 1).

Like all tests in Lua,

[`lua\_toboolean`](#lua_toboolean) returns true for any Lua value

different from **false** and **nil**;

otherwise it returns false.

(If you want to accept only actual boolean values,

use [`lua\_isboolean`](#lua_isboolean) to test the value's type.)

---

### [`lua\_tocfunction`](#lua_tocfunction)

[-0, +0, &ndash;]

```
<pre>lua_CFunction lua_tocfunction (lua_State *L, int index);</pre>
```

<p>

Converts a value at the given index to a C&nbsp;function.  
That value must be a C&nbsp;function;  
otherwise, returns `NULL`.

---

### <a name="lua\_tointeger"><code>lua\_tointeger</code></a></h3><p>

<span class="apii">[-0, +0, &ndash;]</span>

```
<pre>lua_Integer lua_tointeger (lua_State *L, int index);</pre>
```

<p>

Equivalent to [<code>lua\\_tointegerx</code></a> with `isnum` equal to `NULL`.](#lua_tointegerx)

---

### <a name="lua\_tointegerx"><code>lua\_tointegerx</code></a></h3><p>

<span class="apii">[-0, +0, &ndash;]</span>

<pre>lua\_Integer lua\_tointegerx (lua\_State \*L, int index, int

\*isnum);</pre>

<p>

Converts the Lua value at the given index  
to the signed integral type [<code>lua\\_Integer</code></a>.](#lua_Integer)

The Lua value must be a number or a string convertible to a number  
(see [&sect;3.4.2](#3.4.2));  
otherwise, `lua_tointegerx` returns&nbsp;0.

<p>

If the number is not an integer,  
it is truncated in some non-specified way.

<p>

If `isnum` is not `NULL`,  
its referent is assigned a boolean value that  
indicates whether the operation succeeded.

---

### [lua\\_tolstring](#)

[-0, +0, *e*]  

```
const char *lua_tolstring (lua_State *L, int index, size_t
*len);
```

Converts the Lua value at the given index to a C string.  
If `len` is not `NULL`,  
it also sets `*len` with the string length.  
The Lua value must be a string or a number;  
otherwise, the function returns `NULL`.  
If the value is a number,  
then `lua_tolstring` also  
*changes the actual value in the stack to a string*.  
(This change confuses [lua\\_next](#)  
when `lua_tolstring` is applied to keys during a table  
traversal.)

`lua_tolstring` returns a fully aligned pointer  
to a string inside the Lua state.  
This string always has a zero (`\0`)  
after its last character (as in C),  
but can contain other zeros in its body.  
Because Lua has garbage collection,  
there is no guarantee that the pointer returned by  
`lua_tolstring`  
will be valid after the corresponding value is removed from the stack.

---

### [lua\\_tonumber](#)

[-0, +0, &ndash;]  

```
lua_Number lua_tonumber (lua_State *L, int index);
```

Equivalent to [lua\\_tonumberx](#)  
with `isnum` equal to `NULL`.

---

### [lua\\_tonumberx](#)

[-0, +0, &ndash;]

```
<pre>lua_Number lua_tonumberx (lua_State *L, int index, int *isnum);</pre>
```

<p>

Converts the Lua value at the given index to the C type [`lua\_Number`](#lua_Number) (see [`lua\_Number`](#lua_Number)). The Lua value must be a number or a string convertible to a number (see [§3.4.2](#3.4.2)); otherwise, [`lua\_tonumberx`](#lua_tonumberx) returns 0.

<p>

If `isnum` is not `NULL`, its referent is assigned a boolean value that indicates whether the operation succeeded.

---

### [`lua\_topointer`](#lua_topointer)

[-0, +0, &dash;]  
<pre>const void \*lua\_topointer (lua\_State \*L, int index);</pre>

<p>

Converts the value at the given index to a generic C pointer (`void*`). The value can be a userdata, a table, a thread, or a function; otherwise, `lua_topointer` returns `NULL`. Different objects will give different pointers. There is no way to convert the pointer back to its original value.

<p>

Typically this function is used only for debug information.

---

### [`lua\_tostring`](#lua_tostring)

[-0, +0, *e*]  
<pre>const char \*lua\_tostring (lua\_State \*L, int index);</pre>

<p>

Equivalent to [`lua\_tolstring`](#lua_tolstring) with `len` equal to `NULL`.

---

### [lua\\_tothread](#)

[-0, +0, &ndash;]

```
lua_State *lua_tothread (lua_State *L, int index);
```

Converts the value at the given index to a Lua thread (represented as `lua_State*`). This value must be a thread; otherwise, the function returns `NULL`.

---

### [lua\\_tounsigned](#)

[-0, +0, &ndash;]

```
lua_Unsigned lua_tounsigned (lua_State *L, int index);
```

Equivalent to [lua\\_tounsignedx](#) with `isnum` equal to `NULL`.

---

### [lua\\_tounsignedx](#)

[-0, +0, &ndash;]

```
lua_Unsigned lua_tounsignedx (lua_State *L, int index, int *isnum);
```

Converts the Lua value at the given index to the unsigned integral type [lua\\_Unsigned](#). The Lua value must be a number or a string convertible to a number (see [3.4.2](#)); otherwise, `lua_tounsignedx` returns `0`.

If the number is not an integer, it is truncated in some non-specified way. If the number is outside the range of representable values,

it is normalized to the remainder of its division by one more than the maximum representable value.

<p>

If `isnum` is not `NULL`, its referent is assigned a boolean value that indicates whether the operation succeeded.

---

### <a name="lua\_touserdata">`lua_touserdata`</a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>void \*lua\_touserdata (lua\_State \*L, int index);</pre>

<p>

If the value at the given index is a full userdata, returns its block address.  
If the value is a light userdata, returns its pointer.  
Otherwise, returns `NULL`.

---

### <a name="lua\_type">`lua_type`</a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>int lua\_type (lua\_State \*L, int index);</pre>

<p>

Returns the type of the value in the given valid index, or `LUA_TNONE` for a non-valid (but acceptable) index. The types returned by [`lua\_type`](#lua_type) are coded by the following constants defined in `lua.h`:

<a name="pdf-LUA\_TNIL">`LUA_TNIL`</a>,  
<a name="pdf-LUA\_TNUMBER">`LUA_TNUMBER`</a>,  
<a name="pdf-LUA\_TBOOLEAN">`LUA_TBOOLEAN`</a>,  
<a name="pdf-LUA\_TSTRING">`LUA_TSTRING`</a>,  
<a name="pdf-LUA\_TTABLE">`LUA_TTABLE`</a>,  
<a name="pdf-LUA\_TFUNCTION">`LUA_TFUNCTION`</a>,  
<a name="pdf-LUA\_TUSERDATA">`LUA_TUSERDATA`</a>,  
<a name="pdf-LUA\_TTHREAD">`LUA_TTHREAD`</a>,  
and  
<a name="pdf-LUA\_TLIGHTUSERDATA">`LUA_TLIGHTUSERDATA`</a>.

---

### <code>lua\_typename</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>const char \*lua\_typename (lua\_State \*L, int tp);</pre>

<p>  
Returns the name of the type encoded by the value <code>tp</code>, which must be one the values returned by <a href="#lua\_type"><code>lua\_type</code></a>.

---

### <code>lua\_Unsigned</code></a></h3> <pre>typedef unsigned long lua\_Unsigned;</pre>

<p>  
The type used by the Lua API to represent unsigned integral values. It must have at least 32 bits.

<p>  
By default it is an <code>unsigned int</code> or an <code>unsigned long</code>, whichever can hold 32-bit values.

---

### <code>lua\_upvalueindex</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>int lua\_upvalueindex (int i);</pre>

<p>  
Returns the pseudo-index that represents the <code>i</code>-th upvalue of the running function (see <a href="#4.4">&sect;4.4</a>).

---

### <code>lua\_version</code></a></h3><p> <span class="apii">[-0, +0, <em>v</em>]</span>

```
<pre>const lua_Number *lua_version (lua_State *L);</pre>
```

<p>

Returns the address of the version number stored in the Lua core.  
When called with a valid [<code>lua\\_State</code></a>,  
returns the address of the version used to create that state.  
When called with `NULL`,  
returns the address of the version running the call.](#lua_State)

---

### <a name="lua\_Writer"><code>lua\_Writer</code></a></h3>

```
<pre>typedef int (*lua_Writer) (lua_State *L,
 const void* p,
 size_t sz,
 void* ud);</pre>
```

<p>

The type of the writer function used by [<code>lua\\_dump</code></a>.  
Every time it produces another piece of chunk,  
\[<code>lua\\\_dump</code></a> calls the writer,  
passing along the buffer to be written \\(`p`\\),  
its size \\(`sz`\\),  
and the `data` parameter supplied to \\[<code>lua\\\\_dump</code></a>.\\]\\(#lua\\_dump\\)\]\(#lua\_dump\)](#lua_dump)

<p>

The writer returns an error code:  
0 means no errors;  
any other value means an error and stops [<code>lua\\_dump</code></a> from  
calling the writer again.](#lua_dump)

---

### <a name="lua\_xmove"><code>lua\_xmove</code></a></h3><p>

<span class="apii">[-?, +?, &ndash;]</span>

```
<pre>void lua_xmove (lua_State *from, lua_State *to, int n);</pre>
```

<p>

Exchange values between different threads of the same state.

<p>

This function pops `n` values from the stack `from` and pushes them onto the stack `to`.

---

### <a name="lua\_yield"><code>lua\_yield</code></a></h3><p> <span class="apii">[-?, +?, &ndash;]</span> <pre>int lua\_yield (lua\_State \*L, int nresults);</pre>

<p>

This function is equivalent to [<code>lua\\_yieldk</code>](#lua_yieldk), but it has no continuation (see [&sect;4.7](#4.7)). Therefore, when the thread resumes, it returns to the function that called the function calling `lua_yield`.

---

### <a name="lua\_yieldk"><code>lua\_yieldk</code></a></h3><p> <span class="apii">[-?, +?, &ndash;]</span> <pre>int lua\_yieldk (lua\_State \*L, int nresults, int ctx, lua\_CFunction k);</pre>

<p>

Yields a coroutine.

<p>

This function should only be called as the return expression of a C function, as follows:

<pre>

```
 return lua_yieldk (L, n, i, k);
```

</pre><p>

When a C function calls [<code>lua\\_yieldk</code>](#lua_yieldk) in that way, the running coroutine suspends its execution, and the call to [<code>lua\\_resume</code>](#lua_resume) that started this coroutine returns. The parameter `nresults` is the number of values from the stack that are passed as results to [<code>lua\\_resume</code>](#lua_resume).

<p>

When the coroutine is resumed again, Lua calls the given continuation function `k` to continue the execution of the C function that yielded (see [§4.7](#4.7)).

This continuation function receives the same stack from the previous function, with the results removed and

replaced by the arguments passed to `lua_resume`.

Moreover,

the continuation function may access the value `ctx` by calling `lua_getctx`.

## 4.9 – The Debug Interface

<p>

Lua has no built-in debugging facilities.

Instead, it offers a special interface by means of functions and *hooks*.

This interface allows the construction of different kinds of debuggers, profilers, and other tools that need "inside information" from the interpreter.

---

### `lua_Debug`

```
typedef struct lua_Debug {
 int event;
 const char *name; /* (n) */
 const char *namewhat; /* (n) */
 const char *what; /* (S) */
 const char *source; /* (S) */
 int currentline; /* (l) */
 int linedefined; /* (S) */
 int lastlinedefined; /* (S) */
 unsigned char nups; /* (u) number of upvalues */
 unsigned char nparams; /* (u) number of parameters */
 char isvararg; /* (u) */
 char istailcall; /* (t) */
 char short_src[LUA_IDSIZE]; /* (S) */
 /* private part */
}
```

```
other fields
} lua_Debug;</pre>
```

<p>

A structure used to carry different pieces of information about a function or an activation record.

[<code>lua\\_getstack</code></a> fills only the private part](#lua_getstack)

of this structure, for later use.

To fill the other fields of [<code>lua\\_Debug</code></a> with useful information, call \[<code>lua\\\_getinfo</code></a>.\]\(#lua\_getinfo\)](#lua_Debug)

<p>

The fields of [<code>lua\\_Debug</code></a> have the following meaning:](#lua_Debug)

<ul>

<li><b><code>source</code>: </b>

the source of the chunk that created the function.

If `source` starts with a '`@`', it means that the function was defined in a file where the file name follows the '`@`'.

If `source` starts with a '`=`', the remainder of its contents describe the source in a user-dependent manner.

Otherwise, the function was defined in a string where `source` is that string.

</li>

<li><b><code>short\_src</code>: </b>

a "printable" version of `source`, to be used in error messages.

</li>

<li><b><code>linedefined</code>: </b>

the line number where the definition of the function starts.

</li>

<li><b><code>lastlinedefined</code>: </b>

the line number where the definition of the function ends.

</li>

<li><b><code>what</code>: </b>

the string `"Lua"` if the function is a Lua function, `"C"` if it is a C function, `"main"` if it is the main part of a chunk.

</li>

<li><b><code>currentline</code>: </b>  
the current line where the given function is executing.  
When no line information is available,  
<code>currentline</code> is set to -1.  
</li>

<li><b><code>name</code>: </b>  
a reasonable name for the given function.  
Because functions in Lua are first-class values,  
they do not have a fixed name:  
some functions can be the value of multiple global variables,  
while others can be stored only in a table field.  
The <code>lua\_getinfo</code> function checks how the function was  
called to find a suitable name.  
If it cannot find a name,  
then <code>name</code> is set to <code>NULL</code>.  
</li>

<li><b><code>namewhat</code>: </b>  
explains the <code>name</code> field.  
The value of <code>namewhat</code> can be  
<code>"global"</code>, <code>"local"</code>, <code>"method"</code>,  
<code>"field"</code>, <code>"upvalue"</code>, or <code>""</code> (the  
empty string),  
according to how the function was called.  
(Lua uses the empty string when no other option seems to apply.)  
</li>

<li><b><code>istailcall</code>: </b>  
true if this function invocation was called by a tail call.  
In this case, the caller of this level is not in the stack.  
</li>

<li><b><code>nups</code>: </b>  
the number of upvalues of the function.  
</li>

<li><b><code>nparams</code>: </b>  
the number of fixed parameters of the function  
(always 0&nbsp;for C&nbsp;functions).  
</li>

<li><b><code>isvararg</code>: </b>  
true if the function is a vararg function  
(always true for C&nbsp;functions).  
</li>

</ul>

---

### [lua\\_gethook](#)

`lua_gethook`

`lua_Hook lua_gethook (lua_State *L);`

Returns the current hook function.

---

### [lua\\_gethookcount](#)

`lua_gethookcount`

`int lua_gethookcount (lua_State *L);`

Returns the current hook count.

---

### [lua\\_gethookmask](#)

`lua_gethookmask`

`int lua_gethookmask (lua_State *L);`

Returns the current hook mask.

---

### [lua\\_getinfo](#)

`lua_getinfo`

`int lua_getinfo (lua_State *L, const char *what, lua_Debug *ar);`

Gets information about a specific function or function invocation.

To get information about a function invocation,

the parameter `ar` must be a valid activation record that was filled by a previous call to [`lua\_getstack`](#lua_getstack) or given as argument to a hook (see [`lua\_Hook`](#lua_Hook)).

<p>

To get information about a function you push it onto the stack and start the `what` string with the character '`>`'.

(In that case, `lua_getinfo` pops the function from the top of the stack.) For instance, to know in which line a function `f` was defined, you can write the following code:

<pre>

```
lua_Debug ar;
lua_getglobal(L, "f"); /* get global 'f' */
lua_getinfo(L, ">S", &ar);
printf("%d\n", ar.linedefined);
```

</pre>

<p>

Each character in the string `what` selects some fields of the structure `ar` to be filled or a value to be pushed on the stack:

<ul>

<li><b>'<code>n</code>':</b> fills in the field `name` and `namewhat`;

<li><b>'<code>S</code>':</b> fills in the fields `source`, `short_src`, `linedefined`, `lastlinedefined`, and `what`;

<li><b>'<code>l</code>':</b> fills in the field `currentline`;

<li><b>'<code>t</code>':</b> fills in the field `istailcall`;

**'`u`':** fills in the fields  
`nups`, `nparams`, and `isvararg`;

**'`f`':**  
pushes onto the stack the function that is  
running at the given level;

**'`L`':**  
pushes onto the stack a table whose indices are the  
numbers of the lines that are valid on the function.  
(A *valid line* is a line with some associated code,  
that is, a line where you can put a break point.  
Non-valid lines include empty lines and comments.)

**<p>**  
This function returns 0 on error  
(for instance, an invalid option in `what`).

---

### [lua\\_getlocal](#)

[-0, +(0|1), &ndash;]  

```
const char *lua_getlocal (lua_State *L, lua_Debug *ar, int n);
```

**<p>**  
Gets information about a local variable of  
a given activation record or a given function.

**<p>**  
In the first case,  
the parameter `ar` must be a valid activation record that  
was  
filled by a previous call to [lua\\_getstack](#) or  
given as argument to a hook (see [lua\\_Hook](#)).  
The index `n` selects which local variable to inspect;  
see [debug.getlocal](#) for  
details about variable indices  
and names.

<p>  
<a href="#lua\_getlocal"><code>lua\_getlocal</code></a> pushes the variable's value onto the stack and returns its name.

<p>  
In the second case, <code>ar</code> should be <code>NULL</code> and the function to be inspected must be at the top of the stack.  
In this case, only parameters of Lua functions are visible (as there is no information about what variables are active) and no values are pushed onto the stack.

<p>  
Returns <code>NULL</code> (and pushes nothing) when the index is greater than the number of active local variables.

<hr><h3><a name="lua\_getstack"><code>lua\_getstack</code></a></h3><p>  
<span class="apii">[-0, +0, &ndash;]</span>  
<pre>int lua\_getstack (lua\_State \*L, int level, lua\_Debug \*ar);</pre>

<p>  
Gets information about the interpreter runtime stack.

<p>  
This function fills parts of a <a href="#lua\_Debug"><code>lua\_Debug</code></a> structure with an identification of the <em>activation record</em> of the function executing at a given level. Level&nbsp;0 is the current running function, whereas level <em>n+1</em> is the function that has called level <em>n</em> (except for tail calls, which do not count on the stack).  
When there are no errors, <a href="#lua\_getstack"><code>lua\_getstack</code></a> returns 1; when called with a level greater than the stack depth, it returns 0.

---

### [lua\\_getupvalue](#)

[-0, +(0|1), &dash;]

```
const char *lua_getupvalue (lua_State *L, int funcindex, int n);
```

Gets information about a closure's upvalue.

(For Lua functions,

upvalues are the external local variables that the function uses, and that are consequently included in its closure.)

[lua\\_getupvalue](#) gets the index `n` of an upvalue, pushes the upvalue's value onto the stack, and returns its name.

`funcindex` points to the closure in the stack.

(Upvalues have no particular order,

as they are active through the whole function.

So, they are numbered in an arbitrary order.)

Returns `NULL` (and pushes nothing)

when the index is greater than the number of upvalues.

For C functions, this function uses the empty string `""` as a name for all upvalues.

---

### [lua\\_Hook](#)

```
typedef void (*lua_Hook) (lua_State *L, lua_Debug *ar);
```

Type for debugging hook functions.

Whenever a hook is called, its `ar` argument has its field `event` set to the specific event that triggered the hook.

Lua identifies these events with the following constants:

[LUA\\_HOONCALL](#), [LUA\\_HOONRET](#),

[LUA\\_HOONKTAILCALL](#), [LUA\\_HOONKLINE](#),

and [LUA\\_HOONKCOUNT](#).

Moreover, for line events, the field `currentline` is also

set.

To get the value of any other field in `ar`, the hook must call [`lua\_getinfo`](#lua_getinfo).

<p>

For call events, `event` can be `LUA_HOOKCALL`, the normal value, or `LUA_HOOKTAILCALL`, for a tail call; in this case, there will be no corresponding return event.

<p>

While Lua is running a hook, it disables other calls to hooks. Therefore, if a hook calls back Lua to execute a function or a chunk, this execution occurs without any calls to hooks.

<p>

Hook functions cannot have continuations, that is, they cannot call [`lua\_yieldk`](#lua_yieldk), [`lua\_pcallk`](#lua_pcallk), or [`lua\_callk`](#lua_callk) with a non-null `k`.

<p>

Hook functions can yield under the following conditions:  
Only count and line events can yield  
and they cannot yield any value;  
to yield a hook function must finish its execution  
calling [`lua\_yield`](#lua_yield) with  
`nresults` equal to zero.

---

### [`lua\_sethook`](#)

[-0, +0, &ndash;]

```
int lua_sethook (lua_State *L, lua_Hook f, int mask, int count);
```

<p>

Sets the debugging hook function.

<p>

Argument `f` is the hook function.

`mask` specifies on which events the hook will be called: it is formed by a bitwise or of the constants  
<a name="pdf-LUA\_MASKCALL"><code>LUA\_MASKCALL</code></a>,  
<a name="pdf-LUA\_MASKRET"><code>LUA\_MASKRET</code></a>,  
<a name="pdf-LUA\_MASKLINE"><code>LUA\_MASKLINE</code></a>,  
and <a name="pdf-LUA\_MASKCOUNT"><code>LUA\_MASKCOUNT</code></a>.  
The `count` argument is only meaningful when the mask includes `LUA_MASKCOUNT`.  
For each event, the hook is called as explained below:

<ul>

<li><b>The call hook: </b> is called when the interpreter calls a function.

The hook is called just after Lua enters the new function, before the function gets its arguments.

</li>

<li><b>The return hook: </b> is called when the interpreter returns from a function.

The hook is called just before Lua leaves the function.

There is no standard way to access the values to be returned by the function.

</li>

<li><b>The line hook: </b> is called when the interpreter is about to start the execution of a new line of code,

or when it jumps back in the code (even to the same line).

(This event only happens while Lua is executing a Lua function.)

</li>

<li><b>The count hook: </b> is called after the interpreter executes every

`count` instructions.

(This event only happens while Lua is executing a Lua function.)

</li>

</ul>

<p>

A hook is disabled by setting `mask` to zero.

---

### <a name="lua\_setlocal"><code>lua\_setlocal</code></a></h3><p> <span class="apii">[-(0|1), +0, &ndash;]</span> <pre>const char \*lua\_setlocal (lua\_State \*L, lua\_Debug \*ar, int n);</pre>

<p>

Sets the value of a local variable of a given activation record.  
Parameters `ar` and `n` are as in [`lua\_getlocal`](#lua_getlocal)  
(see [`lua\_getlocal`](#lua_getlocal)).  
[`lua\_setlocal`](#lua_setlocal) assigns the  
value at the top of the stack  
to the variable and returns its name.  
It also pops the value from the stack.

<p>

Returns `NULL` (and pops nothing)  
when the index is greater than  
the number of active local variables.

---

### [`lua\_setupvalue`](#lua_setupvalue)

<p>

[-(0|1), +0, &ndash;]

```
const char *lua_setupvalue (lua_State *L, int funcindex, int
n);
```

<p>

Sets the value of a closure's upvalue.  
It assigns the value at the top of the stack  
to the upvalue and returns its name.  
It also pops the value from the stack.  
Parameters `funcindex` and `n` are as in the [`lua\_getupvalue`](#lua_getupvalue)  
(see [`lua\_getupvalue`](#lua_getupvalue)).

<p>

Returns `NULL` (and pops nothing)  
when the index is greater than the number of upvalues.

---

### [`lua\_upvalueid`](#lua_upvalueid)

[-0, +0, &ndash;]

```
void *lua_upvalueid (lua_State *L, int funcindex, int n);
```

<p>

Returns an unique identifier for the upvalue numbered `n` from the closure at index `funcindex`.  
Parameters `funcindex` and `n` are as in the [`lua\_getupvalue`](#lua_getupvalue) (see [`lua\_getupvalue`](#lua_getupvalue)) (but `n` cannot be greater than the number of upvalues).

<p>

These unique identifiers allow a program to check whether different closures share upvalues.

Lua closures that share an upvalue

(that is, that access a same external local variable)

will return identical ids for those upvalue indices.

---

### <a name="lua\_upvaluejoin"><code>lua\_upvaluejoin</code></a></h3><p>

<span class="apii">[-0, +0, &ndash;]</span>

```
<pre>void lua_upvaluejoin (lua_State *L, int funcindex1, int n1,
 int funcindex2, int n2);</pre>
```

<p>

Make the `n1`-th upvalue of the Lua closure at index

`funcindex1`

refer to the `n2`-th upvalue of the Lua closure at index

`funcindex2`.

# >5 &ndash; <a name="5">The Auxiliary Library</a></h1>

<p>

The *auxiliary library* provides several convenient functions to interface C with Lua.

While the basic API provides the primitive functions for all interactions between C and Lua,

the auxiliary library provides higher-level functions for some common tasks.

<p>

All functions and types from the auxiliary library are defined in header file `luauxlib.h` and have a prefix `luaL_`.

All functions in the auxiliary library are built on top of the basic API, and so they provide nothing that cannot be done with that API. Nevertheless, the use of the auxiliary library ensures more consistency to your code.

Several functions in the auxiliary library use internally some extra stack slots. When a function in the auxiliary library uses less than five slots, it does not check the stack size; it simply assumes that there are enough slots.

Several functions in the auxiliary library are used to check C function arguments. Because the error message is formatted for arguments (e.g., "`bad argument #1`"), you should not use these functions for other stack values.

Functions called `luaL_check*` always throw an error if the check is not satisfied.

## 5.1 – [Functions and Types](#)

Here we list all functions and types from the auxiliary library in alphabetical order.

---

### [luaL\\_addchar](#)

[-?, +?, *e*]  

```
void luaL_addchar (luaL_Buffer *B, char c);
```

Adds the byte `c` to the buffer `B` (see [luaL\\_Buffer](#)).

---

### [luaL\\_addlstring](#)

`luaL_addlstring`

`[-?, +?, e]`

```
void luaL_addlstring (luaL_Buffer *B, const char *s, size_t l);
```

Adds the string pointed to by `s` with length `l` to the buffer `B` (see [luaL\\_Buffer](#)). The string can contain embedded zeros.

---

### [luaL\\_addsize](#)

`luaL_addsize`

`[-?, +?, e]`

```
void luaL_addsize (luaL_Buffer *B, size_t n);
```

Adds to the buffer `B` (see [luaL\\_Buffer](#)) a string of length `n` previously copied to the buffer area (see [luaL\\_prepbuffer](#)).

---

### [luaL\\_addstring](#)

`luaL_addstring`

`[-?, +?, e]`

```
void luaL_addstring (luaL_Buffer *B, const char *s);
```

Adds the zero-terminated string pointed to by `s` to the buffer `B` (see [luaL\\_Buffer](#)). The string cannot contain embedded zeros.

---

### <code>luaL\_addvalue</code></a></h3><p> <span class="apii">[-1, +?, <em>e</em>]</span> <pre>void luaL\_addvalue (luaL\_Buffer \*B);</pre>

<p>  
Adds the value at the top of the stack  
to the buffer <code>B</code>  
(see <a href="#luaL\_Buffer"><code>luaL\_Buffer</code></a>).  
Pops the value.

<p>  
This is the only function on string buffers that can (and must)  
be called with an extra element on the stack,  
which is the value to be added to the buffer.

---

### <code>luaL\_argcheck</code></a></h3><p> <span class="apii">[-0, +0, <em>v</em>]</span> <pre>void luaL\_argcheck (lua\_State \*L,                     int cond,                     int arg,                     const char \*extramsg);</pre>

<p>  
Checks whether <code>cond</code> is true.  
If not, raises an error with a standard message.

---

### <code>luaL\_argerror</code></a></h3><p> <span class="apii">[-0, +0, <em>v</em>]</span> <pre>int luaL\_argerror (lua\_State \*L, int arg, const char \*extramsg);</pre>

<p>  
Raises an error with a standard message  
that includes <code>extramsg</code> as a comment.

<p>  
This function never returns,  
but it is an idiom to use it in C&nbsp;functions

as `return luaL_argerror(<em>args</em>)</code>.`

---

### <a name="luaL\_Buffer"><code>luaL\_Buffer</code></a></h3> <pre>typedef struct luaL\_Buffer luaL\_Buffer;</pre>

<p>  
Type for a <em>string buffer</em>.

<p>  
A string buffer allows C&nbsp;code to build Lua strings piecemeal.  
Its pattern of use is as follows:

- <li>First declare a variable <code>b</code> of type <a href="#luaL\_Buffer"><code>luaL\_Buffer</code></a>.</li>  
This call leaves the final string on the top of the stack.</li>
- </ul>

<p>  
If you know beforehand the total size of the resulting string,  
you can use the buffer like this:

- <li>First declare a variable <code>b</code> of type <a href="#luaL\_Buffer"><code>luaL\_Buffer</code></a>.</li>

<li>Then copy the string into that space.</li>

<li>

Finish by calling `luaL_pushresultsize(&b, sz)`, where `sz` is the total size of the resulting string copied into that space.

</li>

</ul>

<p>

During its normal operation, a string buffer uses a variable number of stack slots. So, while using a buffer, you cannot assume that you know where the top of the stack is. You can use the stack between successive calls to buffer operations as long as that use is balanced; that is, when you call a buffer operation, the stack is at the same level it was immediately after the previous buffer operation. (The only exception to this rule is [<code>luaL\\_addvalue</code></a>.\) After calling \[<code>luaL\\\_pushresult</code></a> the stack is back to its level when the buffer was initialized, plus the final string on its top.\]\(#luaL\_pushresult\)](#luaL_addvalue)

---

### <a name="luaL\_buffinit"><code>luaL\_buffinit</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>void luaL\_buffinit (lua\_State \*L, luaL\_Buffer \*B);</pre>

<p>

Initializes a buffer `B`. This function does not allocate any space; the buffer must be declared as a variable (see [<code>luaL\\_Buffer</code></a>\).](#luaL_Buffer)

---

### <a name="luaL\_buffinitsize"><code>luaL\_buffinitsize</code></a></h3><p> <span class="apii">[-?, +?, <em>e</em>]</span> <pre>char \*luaL\_buffinitsize (lua\_State \*L, luaL\_Buffer \*B, size\_t

```
sz);</pre>
```

<p>

Equivalent to the sequence

<a href="#luaL\_buffinit"><code>luaL\_buffinit</code></a>, <a href="#luaL\_prepbuffsize"><code>luaL\_prepbuffsize</code></a>.

---

### <a name="luaL\_callmeta"><code>luaL\_callmeta</code></a></h3><p> <span class="apii">[-0, +0|1, <em>e</em>]</span> <pre>int luaL\_callmeta (lua\_State \*L, int obj, const char \*e);</pre>

<p>

Calls a metamethod.

<p>

If the object at index <code>obj</code> has a metatable and this metatable has a field <code>e</code>, this function calls this field passing the object as its only argument.

In this case this function returns true and pushes onto the stack the value returned by the call.

If there is no metatable or no metamethod, this function returns false (without pushing any value on the stack).

---

### <a name="luaL\_checkany"><code>luaL\_checkany</code></a></h3><p> <span class="apii">[-0, +0, <em>v</em>]</span> <pre>void luaL\_checkany (lua\_State \*L, int arg);</pre>

<p>

Checks whether the function has an argument of any type (including <b>nil</b>) at position <code>arg</code>.

---

### <a name="luaL\_checkint"><code>luaL\_checkint</code></a></h3><p> <span class="apii">[-0, +0, <em>v</em>]</span> <pre>int luaL\_checkint (lua\_State \*L, int arg);</pre>

<p>

Checks whether the function argument `arg` is a number and returns this number cast to an `int`.

---

### [luaL\\_checkinteger](#)

[-0, +0, *v*]

```
lua_Integer luaL_checkinteger (lua_State *L, int arg);
```

Checks whether the function argument `arg` is a number and returns this number cast to a [lua\\_Integer](#).

---

### [luaL\\_checklong](#)

[-0, +0, *v*]

```
long luaL_checklong (lua_State *L, int arg);
```

Checks whether the function argument `arg` is a number and returns this number cast to a `long`.

---

### [luaL\\_checklstring](#)

[-0, +0, *v*]

```
const char *luaL_checklstring (lua_State *L, int arg, size_t *l);
```

Checks whether the function argument `arg` is a string and returns this string; if `l` is not `NULL` fills `*l` with the string's length.

This function uses [lua\\_tolstring](#) to get its result,

so all conversions and caveats of that function apply here.

---

### [luaL\\_checknumber](#)

[-0, +0, *v*]

```
lua_Number luaL_checknumber (lua_State *L, int arg);
```

Checks whether the function argument `arg` is a number and returns this number.

---

### [luaL\\_checkoption](#)

[-0, +0, *v*]

```
int luaL_checkoption (lua_State *L,
 int arg,
 const char *def,
 const char *const lst[]);
```

Checks whether the function argument `arg` is a string and searches for this string in the array `lst` (which must be NULL-terminated). Returns the index in the array where the string was found. Raises an error if the argument is not a string or if the string cannot be found.

If `def` is not `NULL`, the function uses `def` as a default value when there is no argument `arg` or when this argument is **nil**.

This is a useful function for mapping strings to C enums. (The usual convention in Lua libraries is to use strings instead of numbers to select options.)

---

### [luaL\\_checkstack](#)

[-0, +0, *v*]  

```
void luaL_checkstack (lua_State *L, int sz, const char *msg);
```

Grows the stack size to `top + sz` elements, raising an error if the stack cannot grow to that size. `msg` is an additional text to go into the error message (or `NULL` for no additional text).

---

### [luaL\\_checkstring](#)

[-0, +0, *v*]  

```
const char *luaL_checkstring (lua_State *L, int arg);
```

Checks whether the function argument `arg` is a string and returns this string.

This function uses [lua\\_tolstring](#) to get its result, so all conversions and caveats of that function apply here.

---

### [luaL\\_checktype](#)

[-0, +0, *v*]  

```
void luaL_checktype (lua_State *L, int arg, int t);
```

Checks whether the function argument `arg` has type `t`. See [lua\\_type](#) for the encoding of types for `t`.

---

### [luaL\\_checkudata](#)

[-0, +0, *v*]

```
void *luaL_checkudata (lua_State *L, int arg, const char *tname);
```

Checks whether the function argument `arg` is a userdata of the type `tname` (see [luaL\\_newmetatable](#)) and returns the userdata address (see [lua\\_touserdata](#)).

---

### [luaL\\_checkunsigned](#)

[-0, +0, *v*]

```
lua_Unsigned luaL_checkunsigned (lua_State *L, int arg);
```

Checks whether the function argument `arg` is a number and returns this number cast to a `lua_Unsigned`.

---

### [luaL\\_checkversion](#)

[-0, +0, &ndash;]

```
void luaL_checkversion (lua_State *L);
```

Checks whether the core running the call, the core that created the Lua state, and the code making the call are all using the same version of Lua. Also checks whether the core running the call and the core that created the Lua state are using the same address space.

---

### [luaL\\_dofile](#)

`luaL_dofile`

`int luaL_dofile (lua_State *L, const char *filename);`

Loads and runs the given file.

It is defined as the following macro:

```
<pre>
 (luaL_loadfile(L, filename) || lua_pcall(L, 0, LUA_MULTRET, 0))
</pre><p>
```

It returns false if there are no errors  
or true in case of errors.

---

### [luaL\\_dostring](#)

`luaL_dostring`

`int luaL_dostring (lua_State *L, const char *str);`

Loads and runs the given string.

It is defined as the following macro:

```
<pre>
 (luaL_loadstring(L, str) || lua_pcall(L, 0, LUA_MULTRET, 0))
</pre><p>
```

It returns false if there are no errors  
or true in case of errors.

---

### [luaL\\_error](#)

`luaL_error`

`int luaL_error (lua_State *L, const char *fmt, ...);`

Raises an error.

The error message format is given by `fmt`

plus any extra arguments,

following the same rules of [lua\\_pushfstring](#).

It also adds at the beginning of the message the file name and

the line number where the error occurred,

if this information is available.

<p>

This function never returns,  
but it is an idiom to use it in C functions  
as `return luaL_error(<em>args</em>)</code>.`

<hr><h3><a name="luaL\_execresult"><code>luaL\_execresult</code></a></h3><p>

<span class="apii">[-0, +3, <em>e</em>]</span>

<pre>int luaL\_execresult (lua\_State \*L, int stat);</pre>

<p>

This function produces the return values for  
process-related functions in the standard library  
(<a href="#pdf-os.execute"><code>os.execute</code></a> and <a  
href="#pdf-io.close"><code>io.close</code></a>).

<hr><h3><a name="luaL\_fileresult"><code>luaL\_fileresult</code></a></h3><p>

<span class="apii">[-0, +(1|3), <em>e</em>]</span>

<pre>int luaL\_fileresult (lua\_State \*L, int stat, const char  
\*fname);</pre>

<p>

This function produces the return values for  
file-related functions in the standard library  
(<a href="#pdf-io.open"><code>io.open</code></a>, <a href="#pdf-os.rename"><code>os.rename</code></a>, <a href="#pdf-file:seek"><code>file:seek</code></a>, etc.).

<hr><h3><a name="luaL\_getmetafield"><code>luaL\_getmetafield</code></a></h3><p>

<span class="apii">[-0, +(0|1), <em>e</em>]</span>

<pre>int luaL\_getmetafield (lua\_State \*L, int obj, const char \*e);</pre>

<p>

Pushes onto the stack the field `e` from the metatable

of the object at index `obj`.  
If the object does not have a metatable,  
or if the metatable does not have this field,  
returns false and pushes nothing.

---

### [luaL\\_getmetatable](#)

[-0, +1, &ndash;]

```
void luaL_getmetatable (lua_State *L, const char *tname);
```

Pushes onto the stack the metatable associated with name `tname`  
in the registry (see [luaL\\_newmetatable](#)).

---

### [luaL\\_getsubtable](#)

[-0, +1, *e*]

```
int luaL_getsubtable (lua_State *L, int idx, const char
*fname);
```

Ensures that the value `t[fname]`,  
where `t` is the value at index `idx`,  
is a table,  
and pushes that table onto the stack.  
Returns true if it finds a previous table there  
and false if it creates a new table.

---

### [luaL\\_gsub](#)

[-0, +1, *e*]

```
const char *luaL_gsub (lua_State *L,
 const char *s,
 const char *p,
 const char *r);
```

Creates a copy of string `s` by replacing any occurrence of the string `p` with the string `r`. Pushes the resulting string on the stack and returns it.

---

### [luaL\\_len](#)

[-0, +0, **e**]

```
int luaL_len (lua_State *L, int index);
```

Returns the "length" of the value at the given index as a number; it is equivalent to the `#` operator in Lua (see [§3.4.6](#)). Raises an error if the result of the operation is not a number. (This case only can happen through metamethods.)

---

### [luaL\\_loadbuffer](#)

[-0, +1, &dash;]

```
int luaL_loadbuffer (lua_State *L,
 const char *buff,
 size_t sz,
 const char *name);
```

Equivalent to [luaL\\_loadbufferx](#) with `mode` equal to `NULL`.

---

### [luaL\\_loadbufferx](#)

[-0, +1, &dash;]

```
int luaL_loadbufferx (lua_State *L,
 const char *buff,
 size_t sz,
 const char *name,
 const char *mode);
```

<p>

Loads a buffer as a Lua chunk.

This function uses [<code>lua\\_load</code></a> to load the chunk in the buffer pointed to by `buff` with size `sz`.](#lua_load)

<p>

This function returns the same results as [<code>lua\\_load</code></a>.](#lua_load)

`name` is the chunk name,

used for debug information and error messages.

The string `mode` works as in function [<code>lua\\_load</code></a>.](#lua_load)

---

### <code>luaL\_loadfile</code></a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>int luaL\_loadfile (lua\_State \*L, const char \*filename);</pre>

<p>

Equivalent to [<code>luaL\\_loadfile</code></a> with `mode` equal to `NULL`.](#luaL_loadfile)

---

### <code>luaL\_loadfilex</code></a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>int luaL\_loadfilex (lua\_State \*L, const char \*filename, const char \*mode);</pre>

<p>

Loads a file as a Lua chunk.

This function uses [<code>lua\\_load</code></a> to load the chunk in the file named `filename`.](#lua_load)

If `filename` is `NULL`, then it loads from the standard input.

The first line in the file is ignored if it starts with a `#</code>.`

<p>

The string `mode` works as in function [<code>lua\\_load</code></a>](#lua_load)

[<code>lua\\_load</code></a>.](#lua_load)

<p>

This function returns the same results as [<code>lua\\_load</code></a>, but it has an extra error code \[pdf-LUA\\\_ERRFILE"><code>LUA\\\_ERRFILE</code></a> if it cannot open/read the file or the file has a wrong mode.\]\(#\)](#lua_load)

<p>

As [<code>lua\\_load</code></a>, this function only loads the chunk; it does not run it.](#lua_load)

---

### [luaL\\_loadstring"><code>luaL\\_loadstring</code></a></h3><p>](#)

[-0, +1, &ndash;]

```
<pre>int luaL_loadstring (lua_State *L, const char *s);</pre>
```

<p>

Loads a string as a Lua chunk.

This function uses [<code>lua\\_load</code></a> to load the chunk in the zero-terminated string `s`.](#lua_load)

<p>

This function returns the same results as [<code>lua\\_load</code></a>.](#lua_load)

<p>

Also as [<code>lua\\_load</code></a>, this function only loads the chunk; it does not run it.](#lua_load)

---

### [luaL\\_newlib"><code>luaL\\_newlib</code></a></h3><p>](#)

[-0, +1, *e*]

```
<pre>void luaL_newlib (lua_State *L, const luaL_Reg *l);</pre>
```

<p>  
Creates a new table and registers there  
the functions in list <code>l</code>.  
It is implemented as the following macro:

```
<pre>
 (luaL_newlibtable(L,l), luaL_setfuncs(L,l,0))
</pre>
```

---

<hr><h3><a name="luaL\_newlibtable"><code>luaL\_newlibtable</code></a></h3><p>  
<span class="apil">[-0, +1, <em>e</em>]</span>  
<pre>void luaL\_newlibtable (lua\_State \*L, const luaL\_Reg l[]);</pre>

<p>  
Creates a new table with a size optimized  
to store all entries in the array <code>l</code>  
(but does not actually store them).  
It is intended to be used in conjunction with <a  
href="#luaL\_setfuncs"><code>luaL\_setfuncs</code></a>  
(see <a href="#luaL\_newlib"><code>luaL\_newlib</code></a>).

<p>  
It is implemented as a macro.  
The array <code>l</code> must be the actual array,  
not a pointer to it.

---

<hr><h3><a name="luaL\_newmetatable"><code>luaL\_newmetatable</code></a></h3><p>  
<span class="apil">[-0, +1, <em>e</em>]</span>  
<pre>int luaL\_newmetatable (lua\_State \*L, const char \*tname);</pre>

<p>  
If the registry already has the key <code>tname</code>,  
returns 0.  
Otherwise,  
creates a new table to be used as a metatable for userdata,  
adds it to the registry with key <code>tname</code>,  
and returns 1.

<p>

In both cases pushes onto the stack the final value associated with `tname` in the registry.

---

### [luaL\\_newstate](#)

[-0, +0, &dash;]  

```
lua_State *luaL_newstate (void);
```

<p>

Creates a new Lua state.

It calls [lua\\_newstate](#) with an allocator based on the standard C `realloc` function and then sets a panic function (see [§4.6](#)) that prints an error message to the standard error output in case of fatal errors.

<p>

Returns the new state,

or `NULL` if there is a memory allocation error.

---

### [luaL\\_openlibs](#)

[-0, +0, *e*]  

```
void luaL_openlibs (lua_State *L);
```

<p>

Opens all standard Lua libraries into the given state.

---

### [luaL\\_optint](#)

[-0, +0, *v*]  

```
int luaL_optint (lua_State *L, int arg, int d);
```

<p>

If the function argument `arg` is a number, returns this number cast to an `int`.

If this argument is absent or is **nil**, returns `d`.

Otherwise, raises an error.

---

### [luaL\\_optinteger](#)

[-0, +0, *v*]

```
lua_Integer luaL_optinteger (lua_State *L,
 int arg,
 lua_Integer d);
```

If the function argument `arg` is a number, returns this number cast to a [lua\\_Integer](#). If this argument is absent or is **nil**, returns `d`. Otherwise, raises an error.

---

### [luaL\\_optlong](#)

[-0, +0, *v*]

```
long luaL_optlong (lua_State *L, int arg, long d);
```

If the function argument `arg` is a number, returns this number cast to a `long`. If this argument is absent or is **nil**, returns `d`. Otherwise, raises an error.

---

### [luaL\\_optlstring](#)

[-0, +0, *v*]

```
const char *luaL_optlstring (lua_State *L,
 int arg,
 const char *d,
 size_t *l);
```

If the function argument `arg` is a string, returns this string.

If this argument is absent or is **<b>nil</b>**,  
returns `d`.  
Otherwise, raises an error.

`l` is not `NULL`,  
fills the position `*l` with the result's length.

---

### [luaL\\_optnumber](#)

[-0, +0, *v*]

```
lua_Number luaL_optnumber (lua_State *L, int arg, lua_Number d);
```

If the function argument `arg` is a number,  
returns this number.  
If this argument is absent or is **<b>nil</b>**,  
returns `d`.  
Otherwise, raises an error.

---

### [luaL\\_optstring](#)

[-0, +0, *v*]

```
const char *luaL_optstring (lua_State *L,
 int arg,
 const char *d);
```

If the function argument `arg` is a string,  
returns this string.  
If this argument is absent or is **<b>nil</b>**,  
returns `d`.  
Otherwise, raises an error.

---

### [luaL\\_optunsigned](#)

[-0, +0, *v*]  

```
lua_Unsigned luaL_optunsigned (lua_State *L,
 int arg,
 lua_Unsigned u);
```

If the function argument `arg` is a number, returns this number cast to a [`lua\_Unsigned`](#lua_Unsigned). If this argument is absent or is **nil**, returns `u`. Otherwise, raises an error.

---

[luaL\\_prepbuffer](#)

[-?, +?, *e*]  

```
char *luaL_prepbuffer (luaL_Buffer *B);
```

Equivalent to [`luaL\_prepbuffsize`](#luaL_prepbuffsize) with the predefined size [pdf-LUAL\\_BUFFERSIZE](#) `LUAL_BUFFERSIZE`.

---

[luaL\\_prepbuffsize](#)

[-?, +?, *e*]  

```
char *luaL_prepbuffsize (luaL_Buffer *B, size_t sz);
```

Returns an address to a space of size `sz` where you can copy a string to be added to buffer `B` (see [`luaL\_Buffer`](#luaL_Buffer)). After copying the string into this space you must call [`luaL\_addsize`](#luaL_addsize) with the size of the string to actually add it to the buffer.

---

### [luaL\\_pushresult](#)

[-?, +1, *e*]  

```
void luaL_pushresult (luaL_Buffer *B);
```

Finishes the use of buffer `B` leaving the final string on the top of the stack.

---

### [luaL\\_pushresultsize](#)

[-?, +1, *e*]  

```
void luaL_pushresultsize (luaL_Buffer *B, size_t sz);
```

Equivalent to the sequence [luaL\\_addsize](#), [luaL\\_pushresult](#).

---

### [luaL\\_ref](#)

[-1, +0, *e*]  

```
int luaL_ref (lua_State *L, int t);
```

Creates and returns a *reference*,  
in the table at index `t`,  
for the object at the top of the stack (and pops the object).

A reference is a unique integer key.

As long as you do not manually add integer keys into table `t`,

[luaL\\_ref](#) ensures the uniqueness of the key it returns.

You can retrieve an object referred by reference `r` by calling `lua_rawgeti(L, t, r)`.

Function [luaL\\_unref](#) frees a reference and its associated object.

If the object at the top of the stack is **nil**,  
<a href="#luaL\_ref"><code>luaL\_ref</code></a> returns the constant <a name="pdf-LUA\_REFNIL"><code>LUA\_REFNIL</code></a>.  
The constant <a name="pdf-LUA\_NOREF"><code>LUA\_NOREF</code></a> is  
guaranteed to be different  
from any reference returned by <a href="#luaL\_ref"><code>luaL\_ref</code></a>.

---

### <a name="luaL\_Reg"><code>luaL\_Reg</code></a></h3> <pre>typedef struct luaL\_Reg { const char \*name; lua\_CFunction func; } luaL\_Reg;</pre>

<p>  
Type for arrays of functions to be registered by  
<a href="#luaL\_setfuncs"><code>luaL\_setfuncs</code></a>.  
<code>name</code> is the function name and <code>func</code> is a  
pointer to  
the function.  
Any array of <a href="#luaL\_Reg"><code>luaL\_Reg</code></a> must end  
with an sentinel entry  
in which both <code>name</code> and <code>func</code> are <code>NULL</code>.

---

### <a name="luaL\_requiref"><code>luaL\_requiref</code></a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>void luaL\_requiref (lua\_State \*L, const char \*modname, lua\_CFunction openf, int glb);</pre>

<p>  
Calls function <code>openf</code> with string <code>modname</code> as  
an argument  
and sets the call result in <code>package.loaded[modname]</code>,  
as if that function has been called through <a href="#pdf-require"><code>require</code></a>.

<p>  
If <code>glb</code> is true,  
also stores the result into global <code>modname</code>.

<p>

Leaves a copy of that result on the stack.

---

### <a name="luaL\_setfuncs"><code>luaL\_setfuncs</code></a></h3><p> <span class="apii">[-nup, +0, <em>e</em>]</span> <pre>void luaL\_setfuncs (lua\_State \*L, const luaL\_Reg \*l, int nup);</pre>

<p>

Registers all functions in the array <code>l</code> (see <a href="#luaL\_Reg"><code>luaL\_Reg</code></a>) into the table on the top of the stack (below optional upvalues, see next).

<p>

When <code>nup</code> is not zero, all functions are created sharing <code>nup</code> upvalues, which must be previously pushed on the stack on top of the library table. These values are popped from the stack after the registration.

---

### <a name="luaL\_setmetatable"><code>luaL\_setmetatable</code></a></h3><p> <span class="apii">[-0, +0, &ndash;]</span> <pre>void luaL\_setmetatable (lua\_State \*L, const char \*tname);</pre>

<p>

Sets the metatable of the object at the top of the stack as the metatable associated with name <code>tname</code> in the registry (see <a href="#luaL\_newmetatable"><code>luaL\_newmetatable</code></a>).

---

### <a name="luaL\_testudata"><code>luaL\_testudata</code></a></h3><p> <span class="apii">[-0, +0, <em>e</em>]</span> <pre>void \*luaL\_testudata (lua\_State \*L, int arg, const char

```
*tname);</pre>
```

<p>

This function works like [`luaL\_checkudata`](#luaL_checkudata), except that, when the test fails, it returns `NULL` instead of throwing an error.

---

### <a name="luaL\_tolstring">`luaL_tolstring`</a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>const char \*luaL\_tolstring (lua\_State \*L, int idx, size\_t \*len);</pre>

<p>

Converts any Lua value at the given index to a C string in a reasonable format. The resulting string is pushed onto the stack and also returned by the function. If `len` is not `NULL`, the function also sets `*len` with the string length.

<p>

If the value has a metatable with a `__tostring` field, then `luaL_tolstring` calls the corresponding metamethod with the value as argument, and uses the result of the call as its result.

---

### <a name="luaL\_traceback">`luaL_traceback`</a></h3><p> <span class="apii">[-0, +1, <em>e</em>]</span> <pre>void luaL\_traceback (lua\_State \*L, lua\_State \*L1, const char \*msg, int level);</pre>

<p>

Creates and pushes a traceback of the stack `L1`. If `msg` is not `NULL` it is appended at the beginning of the traceback. The `level` parameter tells at which level to start the traceback.

---

### [luaL\\_typename](#)

[-0, +0, &ndash;]  

```
const char *luaL_typename (lua_State *L, int index);
```

<p>

Returns the name of the type of the value at the given index.

---

### [luaL\\_unref](#)

[-0, +0, &ndash;]  

```
void luaL_unref (lua_State *L, int t, int ref);
```

<p>

Releases reference `ref` from the table at index `t`.

(see [luaL\\_ref](#)).

The entry is removed from the table,

so that the referred object can be collected.

The reference `ref` is also freed to be used again.

<p>

If `ref` is [LUA\\_NOREF](#) or [LUA\\_REFNIL](#), [luaL\\_unref](#) does nothing.

---

### [luaL\\_where](#)

[-0, +1, *e*]  

```
void luaL_where (lua_State *L, int lvl);
```

<p>

Pushes onto the stack a string identifying the current position of the control at level `lvl` in the call stack.

Typically this string has the following format:

<pre>

*chunkname*:*currentline*:

</pre><p>

Level 0 is the running function,  
level 1 is the function that called the running function,  
etc.

<p>

This function is used to build a prefix for error messages.

## <h1>6 &ndash; <a name="6">Standard Libraries</a></h1>

<p>

The standard Lua libraries provide useful functions that are implemented directly through the C API. Some of these functions provide essential services to the language (e.g., <a href="#pdf-type"><code>type</code></a> and <a href="#pdf-getmetatable"><code>getmetatable</code></a>); others provide access to "outside" services (e.g., I/O); and others could be implemented in Lua itself, but are quite useful or have critical performance requirements that deserve an implementation in C (e.g., <a href="#pdf-table.sort"><code>table.sort</code></a>).

<p>

All libraries are implemented through the official C API and are provided as separate C modules. Currently, Lua has the following standard libraries:

<ul>

<li>basic library (<a href="#6.1">&sect;6.1</a>);</li>

<li>coroutine library (<a href="#6.2">&sect;6.2</a>);</li>

<li>package library (<a href="#6.3">&sect;6.3</a>);</li>

<li>string manipulation (<a href="#6.4">&sect;6.4</a>);</li>

<li>table manipulation (<a href="#6.5">&sect;6.5</a>);</li>

<li>mathematical functions (<a href="#6.6">&sect;6.6</a>) (sin, log, etc.);</li>

<li>bitwise operations (<a href="#6.7">&sect;6.7</a>);</li>

- <li>input and output (<a href="#6.8">&sect;6.8</a>);</li>
- <li>operating system facilities (<a href="#6.9">&sect;6.9</a>);</li>
- <li>debug facilities (<a href="#6.10">&sect;6.10</a>).</li>

</ul><p>

Except for the basic and the package libraries, each library provides all its functions as fields of a global table or as methods of its objects.

<p>

To have access to these libraries, the C&nbsp;host program should call the <a href="#luaL\_openlibs"><code>luaL\_openlibs</code></a> function, which opens all standard libraries. Alternatively, the host program can open them individually by using <a href="#luaL\_requiref"><code>luaL\_requiref</code></a> to call <a name="pdf-luaopen\_base"><code>luaopen\_base</code></a> (for the basic library), <a name="pdf-luaopen\_package"><code>luaopen\_package</code></a> (for the package library), <a name="pdf-luaopen\_coroutine"><code>luaopen\_coroutine</code></a> (for the coroutine library), <a name="pdf-luaopen\_string"><code>luaopen\_string</code></a> (for the string library), <a name="pdf-luaopen\_table"><code>luaopen\_table</code></a> (for the table library), <a name="pdf-luaopen\_math"><code>luaopen\_math</code></a> (for the mathematical library), <a name="pdf-luaopen\_bit32"><code>luaopen\_bit32</code></a> (for the bit library), <a name="pdf-luaopen\_io"><code>luaopen\_io</code></a> (for the I/O library), <a name="pdf-luaopen\_os"><code>luaopen\_os</code></a> (for the Operating System library), and <a name="pdf-luaopen\_debug"><code>luaopen\_debug</code></a> (for the debug library). These functions are declared in <a name="pdf-lualib.h"><code>lualib.h</code></a>.

## <h2>6.1 &ndash; <a name="6.1">Basic Functions</a></h2>

<p>

The basic library provides core functions to Lua.

If you do not include this library in your application, you should check carefully whether you need to provide implementations for some of its facilities.

<p>  
<hr><h3><a name="pdf-assert"><code>assert (v [, message])</code></a></h3>  
Issues an error when  
the value of its argument <code>v</code> is false (i.e., <b>nil</b> or  
<b>false</b>);  
otherwise, returns all its arguments.  
<code>message</code> is an error message;  
when absent, it defaults to "assertion failed!"

<p>  
<hr><h3><a name="pdf-collectgarbage"><code>collectgarbage ([opt [, arg]])</code></a></h3>

<p>  
This function is a generic interface to the garbage collector.  
It performs different functions according to its first argument,  
<code>opt</code>:

<ul>

<li><b>"<code>collect</code>": </b>  
performs a full garbage-collection cycle.  
This is the default option.  
</li>

<li><b>"<code>stop</code>": </b>  
stops automatic execution of the garbage collector.  
The collector will run only when explicitly invoked,  
until a call to restart it.  
</li>

<li><b>"<code>restart</code>": </b>  
restarts automatic execution of the garbage collector.  
</li>

<li><b>"<code>count</code>": </b>  
returns the total memory in use by Lua (in Kbytes) and  
a second value with the total memory in bytes modulo 1024.  
The first value has a fractional part,  
so the following equality is always true:

```
<pre>
 k, b = collectgarbage("count")
 assert(k*1024 == math.floor(k)*1024 + b)
</pre><p>
```

(The second result is useful when Lua is compiled with a non floating-point type for numbers.)  
</li>

<li><b>"<code>step</code>": </b>  
performs a garbage-collection step.  
The step "size" is controlled by <code>arg</code> (larger values mean more steps) in a non-specified way.  
If you want to control the step size you must experimentally tune the value of <code>arg</code>.  
Returns <b>true</b> if the step finished a collection cycle.  
</li>

<li><b>"<code>setpause</code>": </b>  
sets <code>arg</code> as the new value for the <em>pause</em> of the collector (see <a href="#2.5">&sect;2.5</a>).  
Returns the previous value for <em>pause</em>.  
</li>

<li><b>"<code>setstepmul</code>": </b>  
sets <code>arg</code> as the new value for the <em>step multiplier</em> of the collector (see <a href="#2.5">&sect;2.5</a>).  
Returns the previous value for <em>step</em>.  
</li>

<li><b>"<code>isrunning</code>": </b>  
returns a boolean that tells whether the collector is running (i.e., not stopped).  
</li>

<li><b>"<code>generational</code>": </b>  
changes the collector to generational mode.  
This is an experimental feature (see <a href="#2.5">&sect;2.5</a>).  
</li>

<li><b>"<code>incremental</code>": </b>  
changes the collector to incremental mode.  
This is the default mode.  
</li>

</ul>

<p>  
<hr><h3><a name="pdf-dofile"><code>dofile ([filename])</code></a></h3>  
Opens the named file and executes its contents as a Lua chunk.  
When called without arguments,  
<code>dofile</code> executes the contents of the standard input  
(<code>stdin</code>).  
Returns all values returned by the chunk.  
In case of errors, <code>dofile</code> propagates the error  
to its caller (that is, <code>dofile</code> does not run in protected  
mode).

<p>  
<hr><h3><a name="pdf-error"><code>error (message [, level])</code></a></h3>  
Terminates the last protected function called  
and returns <code>message</code> as the error message.  
Function <code>error</code> never returns.

<p>  
Usually, <code>error</code> adds some information about the error  
position  
at the beginning of the message, if the message is a string.  
The <code>level</code> argument specifies how to get the error  
position.  
With level 1 (the default), the error position is where the  
<code>error</code> function was called.  
Level 2 points the error to where the function  
that called <code>error</code> was called; and so on.  
Passing a level 0 avoids the addition of error position  
information  
to the message.

<p>  
<hr><h3><a name="pdf-\_G"><code>\_G</code></a></h3>  
A global variable (not a function) that  
holds the global environment (see <a href="#2.2">&sect;2.2</a>).  
Lua itself does not use this variable;  
changing its value does not affect any environment,  
nor vice-versa.

<p>  
<hr><h3><a name="pdf-getmetatable"><code>getmetatable (object)</code></a></h3>

<p>  
If <code>object</code> does not have a metatable, returns <b>nil</b>. Otherwise, if the object's metatable has a <code>"\_\_metatable"</code> field, returns the associated value. Otherwise, returns the metatable of the given object.

<p>  
<hr><h3><a name="pdf-ipairs"><code>ipairs (t)</code></a></h3>

<p>  
If <code>t</code> has a metamethod <code>\_\_ipairs</code>, calls it with <code>t</code> as argument and returns the first three results from the call.

<p>  
Otherwise, returns three values: an iterator function, the table <code>t</code>, and 0, so that the construction

<pre>  
 for i,v in ipairs(t) do <em>body</em> end  
</pre><p>  
will iterate over the pairs (<code>1,t[1]</code>), (<code>2,t[2]</code>), ..., up to the first integer key absent from the table.

<p>  
<hr><h3><a name="pdf-load"><code>load (ld [, source [, mode [, env]]])</code></a></h3>

<p>  
Loads a chunk.

<p>

If `ld` is a string, the chunk is this string.

If `ld` is a function,

`load` calls it repeatedly to get the chunk pieces.

Each call to `ld` must return a string that concatenates with previous results.

A return of an empty string, **`nil`**, or no value signals the end of the chunk.

<p>

If there are no syntactic errors,

returns the compiled chunk as a function;

otherwise, returns **`nil`** plus the error message.

<p>

If the resulting function has upvalues,

the first upvalue is set to the value of `env`,

if that parameter is given,

or to the value of the global environment.

(When you load a main chunk,

the resulting function will always have exactly one upvalue,

the `_ENV` variable (see [§2.2](#2.2)).

When you load a binary chunk created from a function (see [<code>string.dump</code>](#pdf-string.dump)),

the resulting function can have arbitrary upvalues.)

<p>

`source` is used as the source of the chunk for error messages

and debug information (see [§4.9](#4.9)).

When absent,

it defaults to `ld`, if `ld` is a string,

or to "`=(load)`" otherwise.

<p>

The string `mode` controls whether the chunk can be text or binary

(that is, a precompiled chunk).

It may be the string "`b`" (only binary chunks),

"`t`" (only text chunks),

or "`bt`" (both binary and text).

The default is "`bt`".

<p>  
<hr><h3><a name="pdf-loadfile"><code>loadfile ([filename [, mode [,  
env]]])</code></a></h3>

<p>  
Similar to <a href="#pdf-load"><code>load</code></a>,  
but gets the chunk from file <code>filename</code>  
or from the standard input,  
if no file name is given.

<p>  
<hr><h3><a name="pdf-next"><code>next (table [, index])</code></a></h3>

<p>  
Allows a program to traverse all fields of a table.  
Its first argument is a table and its second argument  
is an index in this table.  
<code>next</code> returns the next index of the table  
and its associated value.  
When called with <b>nil</b> as its second argument,  
<code>next</code> returns an initial index  
and its associated value.  
When called with the last index,  
or with <b>nil</b> in an empty table,  
<code>next</code> returns <b>nil</b>.  
If the second argument is absent, then it is interpreted as <b>nil</b>.  
In particular,  
you can use <code>next(t)</code> to check whether a table is empty.

<p>  
The order in which the indices are enumerated is not specified,  
<em>even for numeric indices</em>.  
(To traverse a table in numeric order,  
use a numerical <b>for</b>.)

<p>  
The behavior of <code>next</code> is undefined if,  
during the traversal,  
you assign any value to a non-existent field in the table.  
You may however modify existing fields.  
In particular, you may clear existing fields.

<p>  
<hr><h3><a name="pdf-pairs"><code>pairs (t)</code></a></h3>

<p>  
If <code>t</code> has a metamethod <code>\_\_pairs</code>,  
calls it with <code>t</code> as argument and returns the first three  
results from the call.

<p>  
Otherwise,  
returns three values: the <a href="#pdf-next"><code>next</code></a>  
function, the table <code>t</code>, and <b>nil</b>,  
so that the construction

```
<pre>
 for k,v in pairs(t) do body end
</pre><p>
will iterate over all key–value pairs of table <code>t</code>.
```

<p>  
See function <a href="#pdf-next"><code>next</code></a> for the caveats  
of modifying  
the table during its traversal.

<p>  
<hr><h3><a name="pdf-pcall"><code>pcall (f [, arg1,  
&middot;&middot;&middot;])</code></a></h3>

<p>  
Calls function <code>f</code> with  
the given arguments in <em>protected mode</em>.  
This means that any error inside&nbsp;<code>f</code> is not  
propagated;  
instead, <code>pcall</code> catches the error  
and returns a status code.  
Its first result is the status code (a boolean),  
which is true if the call succeeds without errors.  
In such case, <code>pcall</code> also returns all results from the  
call,

after this first result.

In case of any error, `pcall` returns **false** plus the error message.

<p>

<hr><h3><a name="pdf-print"><code>print (&middledot;&middledot;&middledot;)</code></a></h3>

Receives any number of arguments

and prints their values to `stdout`,

using the <a href="#pdf-tostring"><code>tostring</code></a> function to convert each argument to a string.

<code>print</code> is not intended for formatted output,

but only as a quick way to show a value,

for instance for debugging.

For complete control over the output,

use <a href="#pdf-string.format"><code>string.format</code></a> and <a href="#pdf-io.write"><code>io.write</code></a>.

<p>

<hr><h3><a name="pdf-rawequal"><code>rawequal (v1, v2)</code></a></h3>

Checks whether <code>v1</code> is equal to <code>v2</code>,

without invoking any metamethod.

Returns a boolean.

<p>

<hr><h3><a name="pdf-rawget"><code>rawget (table, index)</code></a></h3>

Gets the real value of <code>table[index]</code>,

without invoking any metamethod.

<code>table</code> must be a table;

<code>index</code> may be any value.

<p>

<hr><h3><a name="pdf-rawlen"><code>rawlen (v)</code></a></h3>

Returns the length of the object <code>v</code>,

which must be a table or a string,

without invoking any metamethod.

Returns an integer number.

<p>  
This function returns `table`.

<p>  
<hr><h3><a name="pdf-tonumber"><code>tonumber (e [, base])</code></a></h3>

<p>  
When called with no `base`,  
`tonumber` tries to convert its argument to a number.  
If the argument is already a number or  
a string convertible to a number (see <a href="#3.4.2">&sect;3.4.2</a>),  
then `tonumber` returns this number;  
otherwise, it returns **nil**.

<p>  
When called with `base`,  
then `e` should be a string to be interpreted as  
an integer numeral in that base.  
The base may be any integer between 2 and 36, inclusive.  
In bases above 10, the letter '`A`' (in either upper  
or lower case)  
represents 10, '`B`' represents 11, and so forth,  
with '`Z`' representing 35.  
If the string `e` is not a valid numeral in the given base,  
the function returns **nil**.

<p>  
<hr><h3><a name="pdf-tostring"><code>tostring (v)</code></a></h3>  
Receives a value of any type and  
converts it to a string in a reasonable format.  
(For complete control of how numbers are converted,  
use <a href="#pdf-string.format"><code>string.format</code></a>.)

<p>  
If the metatable of `v` has a `"__tostring"`  
field,  
then `tostring` calls the corresponding value

with `v` as argument,  
and uses the result of the call as its result.

<p>  
<hr><h3><a name="pdf-type"><code>type (v)</code></a></h3>  
Returns the type of its only argument, coded as a string.  
The possible results of this function are  
"<code>nil</code>" (a string, not the value <b>nil</b>),  
"<code>number</code>",  
"<code>string</code>",  
"<code>boolean</code>",  
"<code>table</code>",  
"<code>function</code>",  
"<code>thread</code>",  
and "<code>userdata</code>".

<p>  
<hr><h3><a name="pdf-\_VERSION"><code>\_VERSION</code></a></h3>  
A global variable (not a function) that  
holds a string containing the current interpreter version.  
The current contents of this variable is "<code>Lua 5.2</code>".

<p>  
<hr><h3><a name="pdf-xpcall"><code>xpcall (f, msgf [, arg1,  
&#x2013;&#x2013;&#x2013;])</code></a></h3>

<p>  
This function is similar to <a href="#pdf-pcall"><code>pcall</code></a>,  
except that it sets a new message handler <code>msgf</code>.

## <h2>6.2 &ndash; <a name="6.2">Coroutine Manipulation</a></h2>

<p>

The operations related to coroutines comprise a sub-library of the basic library and come inside the table [pdf-coroutine](#)`coroutine`.

See [§2.6](#) for a general description of coroutines.

---

### [pdf-coroutine.create](#)`coroutine.create (f)`

Creates a new coroutine, with body `f`.  
`f` must be a Lua function.  
Returns this new coroutine,  
an object with type `"thread"`.

---

### [pdf-coroutine.resume](#)`coroutine.resume (co [, val1, &#x2013;&#x2013;])`

Starts or continues the execution of coroutine `co`.  
The first time you resume a coroutine,  
it starts running its body.  
The values `val1`, ... are passed  
as the arguments to the body function.  
If the coroutine has yielded,  
`resume` restarts it;  
the values `val1`, ... are passed  
as the results from the yield.

If the coroutine runs without any errors,  
`resume` returns **true** plus any values passed to  
`yield`  
(if the coroutine yields) or any values returned by the body function  
(if the coroutine terminates).  
If there is any error,  
`resume` returns **false** plus the error message.

<p>  
<hr><h3><a name="pdf-coroutine.running"><code>coroutine.running ()</code></a></h3>

<p>  
Returns the running coroutine plus a boolean,  
true when the running coroutine is the main one.

<p>  
<hr><h3><a name="pdf-coroutine.status"><code>coroutine.status (co)</code></a></h3>

<p>  
Returns the status of coroutine <code>co</code>, as a string:  
<code>"running"</code>,  
if the coroutine is running (that is, it called <code>status</code>);  
<code>"suspended"</code>, if the coroutine is suspended in a call to  
<code>yield</code>,  
or if it has not started running yet;  
<code>"normal"</code> if the coroutine is active but not running  
(that is, it has resumed another coroutine);  
and <code>"dead"</code> if the coroutine has finished its body  
function,  
or if it has stopped with an error.

<p>  
<hr><h3><a name="pdf-coroutine.wrap"><code>coroutine.wrap (f)</code></a></h3>

<p>  
Creates a new coroutine, with body <code>f</code>.  
<code>f</code> must be a Lua function.  
Returns a function that resumes the coroutine each time it is called.  
Any arguments passed to the function behave as the  
extra arguments to <code>resume</code>.  
Returns the same values returned by <code>resume</code>,  
except the first boolean.  
In case of error, propagates the error.

<p>  
<hr><h3><a name="pdf-coroutine.yield"><code>coroutine.yield  
(&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Suspends the execution of the calling coroutine.  
Any arguments to <code>yield</code> are passed as extra results to  
<code>resume</code>.

## <h2>6.3 &ndash; <a name="6.3">Modules</a></h2>

<p>  
The package library provides basic  
facilities for loading modules in Lua.  
It exports one function directly in the global environment:  
<a href="#pdf-require"><code>require</code></a>.  
Everything else is exported in a table <a name="pdf-  
package"><code>package</code></a>.

<p>  
<hr><h3><a name="pdf-require"><code>require (modname)</code></a></h3>

<p>  
Loads the given module.  
The function starts by looking into the <a href="#pdf-  
package.loaded"><code>package.loaded</code></a> table  
to determine whether <code>modname</code> is already loaded.  
If it is, then <code>require</code> returns the value stored  
at <code>package.loaded[modname]</code>.  
Otherwise, it tries to find a <em>loader</em> for the module.

<p>  
To find a loader,  
<code>require</code> is guided by the <a href="#pdf-  
package.searchers"><code>package.searchers</code></a> sequence.  
By changing this sequence,  
we can change how <code>require</code> looks for a module.  
The following explanation is based on the default configuration  
for <a href="#pdf-package.searchers"><code>package.searchers</code></a>

a>.

<p>

First `require` queries `package.preload[modname]` code>.

If it has a value,

this value (which should be a function) is the loader.

Otherwise `require` searches for a Lua loader using the path stored in [<code>package.path</code></a>.](#pdf-package.path)

If that also fails, it searches for a C loader using the path stored in [<code>package.cpath</code></a>.](#pdf-package.cpath)

If that also fails,

it tries an `all-in-one` loader (see [<code>package.searchers</code></a>\).](#pdf-package.searchers)

<p>

Once a loader is found,

`require` calls the loader with two arguments: `modname` and an extra value dependent on how it got the loader.

(If the loader came from a file,

this extra value is the file name.)

If the loader returns any non-nil value,

`require` assigns the returned value to `package.loaded[modname]`.

If the loader does not return a non-nil value and has not assigned any value to `package.loaded[modname]`, then `require` assigns **true** to this entry.

In any case, `require` returns the final value of `package.loaded[modname]`.

<p>

If there is any error loading or running the module, or if it cannot find any loader for the module, then `require` raises an error.

<p>

---

<h3><a name="pdf-package.config"><code>package.config</code></a></h3>

<p>

A string describing some compile-time configurations for packages.  
This string is a sequence of lines:

<ul>

<li>The first line is the directory separator string.  
Default is '`\`' for Windows and '`/`' for all other systems.</li>

<li>The second line is the character that separates templates in a path.  
Default is '`;`'.</li>

<li>The third line is the string that marks the substitution points in a template.  
Default is '`?`'.</li>

<li>The fourth line is a string that, in a path in Windows, is replaced by the executable's directory.  
Default is '`!`'.</li>

<li>The fifth line is a mark to ignore all text before it when building the `luaopen_` function name.  
Default is '`-`'.</li>

</ul>

<p>

<hr><h3><a name="pdf-package.cpath"><code>package.cpath</code></a></h3>

<p>

The path used by <a href="#pdf-require"><code>require</code></a> to search for a C&nbsp;loader.

<p>

Lua initializes the C&nbsp;path <a href="#pdf-package.cpath"><code>package.cpath</code></a> in the same way it initializes the Lua path <a href="#pdf-package.path"><code>package.path</code></a>, using the environment variable <a name="pdf-LUA\_CPATH\_5\_2"><code>LUA\_CPATH\_5\_2</code></a> or the environment variable <a name="pdf-LUA\_CPATH"><code>LUA\_CPATH</code></a> or a default path defined in <code>luaconf.h</code>.

<p>  
<hr><h3><a name="pdf-package.loaded"><code>package.loaded</code></a></h3>

<p>  
A table used by <a href="#pdf-require"><code>require</code></a> to control which modules are already loaded.  
When you require a module <code>modname</code> and <code>package.loaded[modname]</code> is not false, <a href="#pdf-require"><code>require</code></a> simply returns the value stored there.

<p>  
This variable is only a reference to the real table; assignments to this variable do not change the table used by <a href="#pdf-require"><code>require</code></a>.

<p>  
<hr><h3><a name="pdf-package.loadlib"><code>package.loadlib (libname, funcname)</code></a></h3>

<p>  
Dynamically links the host program with the C library <code>libname</code>.

<p>  
If <code>funcname</code> is "<code>\*</code>", then it only links with the library, making the symbols exported by the library available to other dynamically linked libraries. Otherwise, it looks for a function <code>funcname</code> inside the library and returns this function as a C function. So, <code>funcname</code> must follow the <a href="#lua\_CFunction"><code>lua\_CFunction</code></a> prototype (see <a href="#lua\_CFunction"><code>lua\_CFunction</code></a>).

<p>

This is a low-level function.  
It completely bypasses the package and module system.  
Unlike [`require`](#pdf-require),  
it does not perform any path searching and  
does not automatically adds extensions.  
`libname` must be the complete file name of the  
library,  
including if necessary a path and an extension.  
`funcname` must be the exact name exported by the  
library  
(which may depend on the compiler and linker used).

`<p>`  
This function is not supported by Standard C.  
As such, it is only available on some platforms  
(Windows, Linux, Mac OS X, Solaris, BSD,  
plus other Unix systems that support the `dlfcn` standard).

`<p>`  

---

### [`package.path`](#pdf-package.path)

`<p>`  
The path used by [`require`](#pdf-require) to  
search for a Lua loader.

`<p>`  
At start-up, Lua initializes this variable with  
the value of the environment variable [`LUA\_PATH\_5\_2`](#pdf-LUA_PATH_5_2) or  
the environment variable [`LUA\_PATH`](#pdf-LUA_PATH) or  
with a default path defined in `luaconf.h`,  
if those environment variables are not defined.  
Any `;;` in the value of the environment variable  
is replaced by the default path.

`<p>`  

---

### [`package.preload`](#pdf-package.preload)

<p>

A table to store loaders for specific modules  
(see [<code>require</code></a>\).](#pdf-require)

<p>

This variable is only a reference to the real table;  
assignments to this variable do not change the  
table used by [<code>require</code></a>.](#pdf-require)

<p>

---

<h3><a name="pdf-package.searchers"><code>package.searchers</code></a></h3>

<p>

A table used by [<code>require</code></a> to  
control how to load modules.](#pdf-require)

<p>

Each entry in this table is a *searcher function*.  
When looking for a module,  
[<code>require</code></a> calls each of these  
searchers in ascending order,  
with the module name \(the argument given to \[<code>require</code></a>\\) as its  
sole parameter.  
The function can return another function \\(the module \\*loader\\*\\)  
plus an extra value that will be passed to that loader,  
or a string explaining why it did not find that module  
\\(or `nil` if it has nothing to say\\).\]\(#pdf-require\)](#pdf-require)

<p>

Lua initializes this table with four searcher functions.

<p>

The first searcher simply looks for a loader in the  
[<code>package.preload</code></a> table.](#pdf-package.preload)

<p>

The second searcher looks for a loader as a Lua library,  
using the path stored at [<code>package.path</code></a>.](#pdf-package.path)

The search is done as described in function [<code>package.searchpath</code></a>.](#pdf-package.searchpath)

<p>

The third searcher looks for a loader as a C&nbsp;library, using the path given by the variable [<code>package.cpath</code></a>.](#pdf-package.cpath)

Again,

the search is done as described in function [<code>package.searchpath</code></a>.](#pdf-package.searchpath)

For instance,

if the C&nbsp;path is the string

<pre>

```
"/?.so;./?.dll;/usr/local/?/init.so"
```

</pre><p>

the searcher for module `foo`

will try to open the files `./foo.so`, `./foo.dll`

`code`, and `/usr/local/foo/init.so`, in that order.

Once it finds a C&nbsp;library,

this searcher first uses a dynamic link facility to link the application with the library.

Then it tries to find a C&nbsp;function inside the library to be used as the loader.

The name of this C&nbsp;function is the string "`luaopen_`" concatenated with a copy of the module name where each dot is replaced by an underscore.

Moreover, if the module name has a hyphen,

its prefix up to (and including) the first hyphen is removed.

For instance, if the module name is `a.v1-b.c`, the function name will be `luaopen_b_c`.

<p>

The fourth searcher tries an *all-in-one loader*.

It searches the C&nbsp;path for a library for the root name of the given module.

For instance, when requiring `a.b.c`,

it will search for a C&nbsp;library for `a`.

If found, it looks into it for an open function for the submodule;

in our example, that would be `luaopen_a_b_c`.

With this facility, a package can pack several C&nbsp;submodules into one single library,

with each submodule keeping its original open function.

<p>

All searchers except the first one (preload) return as the extra value the file name where the module was found, as returned by `<a href="#pdf-package.searchpath"><code>package.searchpath</code></a>`. The first searcher returns no extra value.

`<p>  
<hr><h3><a name="pdf-package.searchpath"><code>package.searchpath  
(name, path [, sep [, rep]])</code></a></h3>`

`<p>  
Searches for the given <code>name</code> in the given <code>path</code>.`

`<p>  
A path is a string containing a sequence of  
<em>templates</em> separated by semicolons.  
For each template,  
the function replaces each interrogation mark (if any)  
in the template with a copy of <code>name</code>  
wherein all occurrences of <code>sep</code>  
(a dot, by default)  
were replaced by <code>rep</code>  
(the system's directory separator, by default),  
and then tries to open the resulting file name.`

`<p>  
For instance, if the path is the string`

`<pre>  
 "./?..lua;./?.lc;/usr/local/?/init.lua"  
</pre><p>  
the search for the name <code>foo.a</code>  
will try to open the files  
<code>./foo/a.lua</code>, <code>./foo/a.lc</code>, and  
<code>/usr/local/foo/a/init.lua</code>, in that order.`

`<p>  
Returns the resulting name of the first file that it can  
open in read mode (after closing the file),  
or <b>nil</b> plus an error message if none succeeds.  
(This error message lists all file names it tried to open.)`

## 6.4 &dash; [String Manipulation](#)

This library provides generic functions for string manipulation, such as finding and extracting substrings, and pattern matching. When indexing a string in Lua, the first character is at position 1 (not at 0, as in C). Indices are allowed to be negative and are interpreted as indexing backwards, from the end of the string. Thus, the last character is at position -1, and so on.

The string library provides all its functions inside the table [string](#). It also sets a metatable for strings where the `__index` field points to the `string` table. Therefore, you can use the string functions in object-oriented style. For instance, `string.byte(s,i)` can be written as `s:byte(i)`.

The string library assumes one-byte character encodings.

---

### [string.byte](#) (`s` [, `i` [, `j`]])

Returns the internal numerical codes of the characters `s[i]`, `s[i+1]`, ..., `s[j]`. The default value for `i` is 1; the default value for `j` is `i`. These indices are corrected following the same rules of function [string.sub](#).

Numerical codes are not necessarily portable across platforms.

<p>

<hr><h3><a name="pdf-string.char"><code>string.char  
(`&middledot;&middledot;&middledot;`)</code></a></h3>

Receives zero or more integers.

Returns a string with length equal to the number of arguments,  
in which each character has the internal numerical code equal  
to its corresponding argument.

<p>

Numerical codes are not necessarily portable across platforms.

<p>

<hr><h3><a name="pdf-string.dump"><code>string.dump (function)</  
code></a></h3>

<p>

Returns a string containing a binary representation of the given  
function,  
so that a later <a href="#pdf-load"><code>load</code></a> on this  
string returns  
a copy of the function (but with new upvalues).

<p>

<hr><h3><a name="pdf-string.find"><code>string.find (s, pattern [,  
init [, plain]])</code></a></h3>

<p>

Looks for the first match of

<code>pattern</code> in the string <code>s</code>.

If it finds a match, then <code>find</code> returns the indices  
of&nbsp;<code>s</code>

where this occurrence starts and ends;

otherwise, it returns <b>nil</b>.

A third, optional numerical argument <code>init</code> specifies  
where to start the search;

its default value is&nbsp;<b>1</b> and can be negative.

A value of <b>true</b> as a fourth, optional argument <code>plain</

`code>`  
turns off the pattern matching facilities,  
so the function does a plain "find substring" operation,  
with no characters in `<code>pattern</code>` being considered magic.  
Note that if `<code>plain</code>` is given, then `<code>init</code>` must  
be given as well.

`<p>`  
If the pattern has captures,  
then in a successful match  
the captured values are also returned,  
after the two indices.

`<p>`  
`<hr><h3><a name="pdf-string.format"><code>string.format (formatstring,`  
`&middledot;&middledot;&middledot;)</code></a></h3>`

`<p>`  
Returns a formatted version of its variable number of arguments  
following the description given in its first argument (which must be a  
string).  
The format string follows the same rules as the ISO C function  
`<code>sprintf</code>`.  
The only differences are that the options/modifiers  
`<code>*</code>`, `<code>h</code>`, `<code>L</code>`, `<code>l</code>`,  
`<code>n</code>`,  
and `<code>p</code>` are not supported  
and that there is an extra option, `<code>q</code>`.  
The `<code>q</code>` option formats a string between double quotes,  
using escape sequences when necessary to ensure that  
it can safely be read back by the Lua interpreter.  
For instance, the call

`<pre>`  
    `string.format('%q', 'a string with "quotes" and \n new line')`  
`</pre><p>`  
may produce the string:

`<pre>`  
    ["a string with \"quotes\" and \](#)  
    [new line"](#)  
`</pre>`

`<p>`  
Options

`A` and `a` (when available),  
`E`, `e`, `f`,  
`G`, and `g` all expect a number as argument.  
Options `c`, `d`,  
`i`, `o`, `u`, `X`, and  
`x`  
also expect a number,  
but the range of that number may be limited by  
the underlying C implementation.  
For options `o`, `u`, `X`, and  
`x`,  
the number cannot be negative.  
Option `q` expects a string;  
option `s` expects a string without embedded zeros.  
If the argument to option `s` is not a string,  
it is converted to one following the same rules of [`tostring`](#pdf-tostring).

<p>  
<hr><h3><a name="pdf-string.gmatch"><code>string.gmatch (s, pattern)</code></a></h3>  
Returns an iterator function that,  
each time it is called,  
returns the next captures from `pattern` over the string  
`s`.  
If `pattern` specifies no captures,  
then the whole match is produced in each call.

<p>  
As an example, the following loop  
will iterate over all the words from string `s`,  
printing one per line:

```
<pre>
 s = "hello world from Lua"
 for w in string.gmatch(s, "%a+") do
 print(w)
 end
</pre>
```

<p>  
The next example collects all pairs `key=value` from the  
given string into a table:

```
<pre>
 t = {}
 s = "from=world, to=Lua"
 for k, v in string.gmatch(s, "(%w+)=(%w+)") do
```

```
 t[k] = v
 end
</pre>
```

<p>

For this function, a caret '`<code>^</code>`' at the start of a pattern does not work as an anchor, as this would prevent the iteration.

<p>

<hr><h3><a name="pdf-string.gsub"><code>string.gsub (s, pattern, repl

[, n])</code></a></h3>

Returns a copy of `s`

in which all (or the first `n`, if given)

occurrences of the `pattern` have been

replaced by a replacement string specified by `repl`, which can be a string, a table, or a function.

`gsub` also returns, as its second value, the total number of matches that occurred.

The name `gsub` comes from *Global SUBstitution*.

<p>

If `repl` is a string, then its value is used for replacement.

The character `%` works as an escape character:

any sequence in `repl` of the form `%<em>d</em></code>`

with `d` between 1 and 9,

stands for the value of the `d`-th captured substring.

The sequence `%0` stands for the whole match.

The sequence `%%` stands for a single `%`.

<p>

If `repl` is a table, then the table is queried for every match,

using the first capture as the key.

<p>

If `repl` is a function, then this function is called every time a

match occurs, with all captured substrings passed as arguments, in order.

<p>

In any case,  
if the pattern specifies no captures,  
then it behaves as if the whole pattern was inside a capture.

<p>

If the value returned by the table query or by the function call  
is a string or a number,  
then it is used as the replacement string;  
otherwise, if it is <b>false</b> or <b>nil</b>,  
then there is no replacement  
(that is, the original match is kept in the string).

<p>

Here are some examples:

<pre>

```
x = string.gsub("hello world", "(%w+)", "%1 %1")
--> x="hello hello world world"
```

```
x = string.gsub("hello world", "%w+", "%0 %0", 1)
--> x="hello hello world"
```

```
x = string.gsub("hello world from Lua", "(%w+)%s*(%w+)", "%2 %1")
--> x="world hello Lua from"
```

```
os.getenv)
x = string.gsub("home = $HOME, user = $USER", "%$(%w+)",
```

```
--> x="home = /home/roberto, user = roberto"
```

```
x = string.gsub("4+5 = $return 4+5$", "%$(.-)%$", function (s)
 return load(s)()
end)
--> x="4+5 = 9"
```

```
local t = {name="lua", version="5.2"}
x = string.gsub("$name-$version.tar.gz", "%$(%w+)", t)
--> x="lua-5.2.tar.gz"
```

</pre>

<p>

<hr><h3><a name="pdf-string.len"><code>string.len (s)</code></a></h3>  
Receives a string and returns its length.  
The empty string <code>""</code> has length 0.  
Embedded zeros are counted,  
so <code>"a\000bc\000"</code> has length 5.

<p>  
<hr><h3><a name="pdf-string.lower"><code>string.lower (s)</code></a></h3>  
Receives a string and returns a copy of this string with all uppercase letters changed to lowercase.  
All other characters are left unchanged.  
The definition of what an uppercase letter is depends on the current locale.

<p>  
<hr><h3><a name="pdf-string.match"><code>string.match (s, pattern [, init])</code></a></h3>  
Looks for the first *match* of  
<code>pattern</code> in the string <code>s</code>.  
If it finds one, then <code>match</code> returns the captures from the pattern;  
otherwise it returns **nil**.  
If <code>pattern</code> specifies no captures, then the whole match is returned.  
A third, optional numerical argument <code>init</code> specifies where to start the search;  
its default value is 1 and can be negative.

<p>  
<hr><h3><a name="pdf-string.rep"><code>string.rep (s, n [, sep])</code></a></h3>  
Returns a string that is the concatenation of <code>n</code> copies of the string <code>s</code> separated by the string <code>sep</code>.  
The default value for <code>sep</code> is the empty string (that is, no separator).

<p>  
<hr><h3><a name="pdf-string.reverse"><code>string.reverse (s)</code></a></h3>  
Returns a string that is the string <code>s</code> reversed.

<p>  
<hr><h3><a name="pdf-string.sub"><code>string.sub (s, i [, j])</code></a></h3>  
Returns the substring of <code>s</code> that starts at <code>i</code> and continues until <code>j</code>; <code>i</code> and <code>j</code> can be negative. If <code>j</code> is absent, then it is assumed to be equal to -1 (which is the same as the string length). In particular, the call <code>string.sub(s,1,j)</code> returns a prefix of <code>s</code> with length <code>j</code>, and <code>string.sub(s, -i)</code> returns a suffix of <code>s</code> with length <code>i</code>.

<p>  
If, after the translation of negative indices, <code>i</code> is less than 1, it is corrected to 1. If <code>j</code> is greater than the string length, it is corrected to that length. If, after these corrections, <code>i</code> is greater than <code>j</code>, the function returns the empty string.

<p>  
<hr><h3><a name="pdf-string.upper"><code>string.upper (s)</code></a></h3>  
Receives a string and returns a copy of this string with all lowercase letters changed to uppercase. All other characters are left unchanged. The definition of what a lowercase letter is depends on the current locale.

### <h3>6.4.1 &ndash; <a name="6.4.1">Patterns</a></h3>

<h4>Character Class:</h4><p>  
A <em>character class</em> is used to represent a set of characters. The following combinations are allowed in describing a character class:

<ul>

<li><b><em>x</em>: </b>  
(where <em>x</em> is not one of the <em>magic characters</em>  
<code>^\$()%.[\]\*+-?</code>)  
represents the character <em>x</em> itself.  
</li>

<li><b><code>.</code>: </b> (a dot) represents all characters.</li>

<li><b><code>%a</code>: </b> represents all letters.</li>

<li><b><code>%c</code>: </b> represents all control characters.</li>

<li><b><code>%d</code>: </b> represents all digits.</li>

<li><b><code>%g</code>: </b> represents all printable characters  
except space.</li>

<li><b><code>%l</code>: </b> represents all lowercase letters.</li>

<li><b><code>%p</code>: </b> represents all punctuation characters.</li>

<li><b><code>%s</code>: </b> represents all space characters.</li>

<li><b><code>%u</code>: </b> represents all uppercase letters.</li>

<li><b><code>%w</code>: </b> represents all alphanumeric characters.</li>

<li><b><code>%x</code>: </b> represents all hexadecimal digits.</li>

<li><b><code>%<em>x</em></code>: </b> (where <em>x</em> is any non-  
alphanumeric character)  
represents the character <em>x</em>.  
This is the standard way to escape the magic characters.  
Any punctuation character (even the non magic)  
can be preceded by a '<code>%</code>'  
when used to represent itself in a pattern.  
</li>

<li><b><code>[<em>set</em>]</code>: </b>  
represents the class which is the union of all  
characters in <em>set</em>.  
A range of characters can be specified by  
separating the end characters of the range,  
in ascending order, with a '<code>--</code>'.  
All classes <code>%</code><em>x</em> described above can also be used  
as

components in `<em>set</em>`.

All other characters in `<em>set</em>` represent themselves.  
For example, `<code>[%w_]</code>` (or `<code>[_%w]</code>`)  
represents all alphanumeric characters plus the underscore,  
`<code>[0-7]</code>` represents the octal digits,  
and `<code>[0-7%l%-]</code>` represents the octal digits plus  
the lowercase letters plus the '`<code>-</code>`' character.

`<p>`

The interaction between ranges and classes is not defined.  
Therefore, patterns like `<code>[%a-z]</code>` or `<code>[a-%]</code>`  
have no meaning.

`</li>`

`<li><b><code>[^<em>set</em>]</code>: </b>`  
represents the complement of `<em>set</em>`,  
where `<em>set</em>` is interpreted as above.  
`</li>`

`</ul><p>`

For all classes represented by single letters (`<code>%a</code>`,  
`<code>%c</code>`, etc.),  
the corresponding uppercase letter represents the complement of the  
class.  
For instance, `<code>%S</code>` represents all non-space characters.

`<p>`

The definitions of letter, space, and other character groups  
depend on the current locale.  
In particular, the class `<code>[a-z]</code>` may not be equivalent to  
`<code>%l</code>`.

`<h4>Pattern Item:</h4><p>`

A `<em>pattern item</em>` can be

`<ul>`

`<li>`  
a single character class,  
which matches any single character in the class;  
`</li>`

`<li>`  
a single character class followed by '`<code>*</code>`',

which matches 0 or more repetitions of characters in the class.  
These repetition items will always match the longest possible  
sequence;  
</li>

<li>  
a single character class followed by '<code>+</code>',  
which matches 1 or more repetitions of characters in the class.  
These repetition items will always match the longest possible  
sequence;  
</li>

<li>  
a single character class followed by '<code>-</code>',  
which also matches 0 or more repetitions of characters in the class.  
Unlike '<code>\*</code>',  
these repetition items will always match the shortest possible  
sequence;  
</li>

<li>  
a single character class followed by '<code>?</code>',  
which matches 0 or 1 occurrence of a character in the class;  
</li>

<li>  
<code>%<em>n</em></code>, for <em>n</em> between 1 and 9;  
such item matches a substring equal to the <em>n</em>-th captured  
string  
(see below);  
</li>

<li>  
<code>%b<em>xy</em></code>, where <em>x</em> and <em>y</em> are two  
distinct characters;  
such item matches strings that start with<em>x</em>, end  
with<em>y</em>,  
and where the <em>x</em> and <em>y</em> are <em>balanced</em>.  
This means that, if one reads the string from left to right,  
counting <em>+1</em> for an <em>x</em> and <em>-1</em> for a <em>y</em>,  
the ending <em>y</em> is the first <em>y</em> where the count reaches  
0.  
For instance, the item <code>%b()</code> matches expressions with  
balanced parentheses.  
</li>

<li>  
<code>%f[<em>set</em>]</code>, a <em>frontier pattern</em>;  
such item matches an empty string at any position such that

the next character belongs to `<em>set</em>`  
and the previous character does not belong to `<em>set</em>`.  
The set `<em>set</em>` is interpreted as previously described.  
The beginning and the end of the subject are handled as if  
they were the character '`<code>\0</code>`'.  
</li>

</ul>

#### <h4>Pattern:</h4><p>

A `<em>pattern</em>` is a sequence of pattern items.  
A caret '`<code>^</code>`' at the beginning of a pattern anchors the  
match at the  
beginning of the subject string.  
A '`<code>$</code>`' at the end of a pattern anchors the match at the  
end of the subject string.  
At other positions,  
'`<code>^</code>`' and '`<code>$</code>`' have no special meaning and  
represent themselves.

#### <h4>Captures:</h4><p>

A pattern can contain sub-patterns enclosed in parentheses;  
they describe `<em>captures</em>`.  
When a match succeeds, the substrings of the subject string  
that match captures are stored (`<em>captured</em>`) for future use.  
Captures are numbered according to their left parentheses.  
For instance, in the pattern `<code>"a*(.)%w(%s*)"</code>`,  
the part of the string matching `<code>"a*(.)%w(%s*)"</code>` is  
stored as the first capture (and therefore has number&nbsp;1);  
the character matching `<code>.</code>` is captured with  
number&nbsp;2,  
and the part matching `<code>%s*</code>` has number&nbsp;3.

<p>

As a special case, the empty capture `<code>()</code>` captures  
the current string position (a number).  
For instance, if we apply the pattern `<code>"()aa()</code>` on the  
string `<code>"flaaap"</code>`, there will be two captures:  
3&nbsp;and&nbsp;5.

## 6.5 &ndash; [Table Manipulation](#)

<p>

This library provides generic functions for table manipulation. It provides all its functions inside the table [pdf-table](#)`<code>table</code>.`

<p>

Remember that, whenever an operation needs the length of a table, the table should be a proper sequence or have a `<code>__len</code>` metamethod (see [&sect;3.4.6](#)). All functions ignore non-numeric keys in tables given as arguments.

<p>

For performance reasons, all table accesses (get/set) performed by these functions are raw.

<p>

---

### [pdf-table.concat](#)`<code>table.concat (list [, sep [, i [, j]]])</code>`

<p>

Given a list where all elements are strings or numbers, returns the string `<code>list[i]..sep..list[i+1]&middot;&middot;&middot; sep..list[j]</code>`. The default value for `<code>sep</code>` is the empty string, the default for `<code>i</code>` is 1, and the default for `<code>j</code>` is `<code>#list</code>`. If `<code>i</code>` is greater than `<code>j</code>`, returns the empty string.

<p>

---

### [pdf-table.insert](#)`<code>table.insert (list, [pos,]`

value)</code></a></h3>

<p>

Inserts element `value` at position `pos` in `list`, shifting up the elements `list[pos]`, `list[pos+1]`, `&middledot;&middledot;&middledot;`, `list[#list]`</code>.

The default value for `pos` is `#list+1`, so that a call `table.insert(t,x)` inserts `x` at the end of list `t`.

<p>

---

<h3><a name="pdf-table.pack"><code>table.pack (&middledot;&middledot;&middledot;)</code></a></h3>

<p>

Returns a new table with all parameters stored into keys 1, 2, etc. and with a field "`n`" with the total number of parameters. Note that the resulting table may not be a sequence.

<p>

---

<h3><a name="pdf-table.remove"><code>table.remove (list [, pos])</code></a></h3>

<p>

Removes from `list` the element at position `pos`</code>, returning the value of the removed element. When `pos` is an integer between 1 and `#list`, it shifts down the elements `list[pos+1]`, `list[pos+2]`, `&middledot;&middledot;&middledot;`, `list[#list]` and erases element `list[#list]`; The index `pos` can also be 0 when `#list` is 0, or `#list + 1`; in those cases, the function erases the element `list[pos]`</code>.

<p>

The default value for `pos` is `#list`, so that a call `table.remove(t)` removes the last element of list `t`.

<p>

---

### <a name="pdf-table.sort">`table.sort (list [, comp])`</a></h3>

<p>

Sorts list elements in a given order, *in-place*, from `list[1]` to `list[#list]`. If `comp` is given, then it must be a function that receives two list elements and returns true when the first element must come before the second in the final order (so that `not comp(list[i+1],list[i])` will be true after the sort). If `comp` is not given, then the standard Lua operator `<` is used instead.

<p>

The sort algorithm is not stable; that is, elements considered equal by the given order may have their relative positions changed by the sort.

<p>

---

### <a name="pdf-table.unpack">`table.unpack (list [, i [, j]])`</a></h3>

<p>

Returns the elements from the given table. This function is equivalent to

<pre>

```
return list[i], list[i+1], –––, list[j]
```

</pre><p>

By default, `i` is `1` and `j` is `#list`.

## 6.6 – [Mathematical Functions](#)

This library is an interface to the standard C math library. It provides all its functions inside the table [pdf-math](#)`math`.

---

[pdf-math.abs](#)`math.abs (x)`

Returns the absolute value of `x`.

[pdf-math.acos](#)`math.acos (x)`

Returns the arc cosine of `x` (in radians).

[pdf-math.asin](#)`math.asin (x)`

Returns the arc sine of `x` (in radians).

[pdf-math.atan](#)`math.atan (x)`

Returns the arc tangent of `x` (in radians).

<p>  
<hr><h3><a name="pdf-math.atan2"><code>math.atan2 (y, x)</code></a></h3>

<p>  
Returns the arc tangent of <code>y/x</code> (in radians),  
but uses the signs of both parameters to find the  
quadrant of the result.  
(It also handles correctly the case of <code>x</code> being zero.)

<p>  
<hr><h3><a name="pdf-math.ceil"><code>math.ceil (x)</code></a></h3>

<p>  
Returns the smallest integer larger than or equal to <code>x</code>.

<p>  
<hr><h3><a name="pdf-math.cos"><code>math.cos (x)</code></a></h3>

<p>  
Returns the cosine of <code>x</code> (assumed to be in radians).

<p>  
<hr><h3><a name="pdf-math.cosh"><code>math.cosh (x)</code></a></h3>

<p>  
Returns the hyperbolic cosine of <code>x</code>.

<p>  
<hr><h3><a name="pdf-math.deg"><code>math.deg (x)</code></a></h3>

<p>  
Returns the angle <code>x</code> (given in radians) in degrees.

<p>  
<hr><h3><a name="pdf-math.exp"><code>math.exp (x)</code></a></h3>

<p>  
Returns the value <em> $e^x$ </em>.

<p>  
<hr><h3><a name="pdf-math.floor"><code>math.floor (x)</code></a></h3>

<p>  
Returns the largest integer smaller than or equal to <code>x</code>.

<p>  
<hr><h3><a name="pdf-math.fmod"><code>math.fmod (x, y)</code></a></h3>

<p>  
Returns the remainder of the division of <code>x</code> by <code>y</code>  
<code>code>  
that rounds the quotient towards zero.

<p>  
<hr><h3><a name="pdf-math.frexp"><code>math.frexp (x)</code></a></h3>

<p>  
Returns <code>m</code> and <code>e</code> such that <em> $x = m2^e$ </em>,  
<code>e</code> is an integer and the absolute value of <code>m</code>  
is  
in the range <em> $[0.5, 1)$ </em>  
(or zero when <code>x</code> is zero).

<p>  
<hr><h3><a name="pdf-math.huge"><code>math.huge</code></a></h3>

<p>  
The value <code>HUGE\_VAL</code>,  
a value larger than or equal to any other numerical value.

<p>  
<hr><h3><a name="pdf-math.ldexp"><code>math.ldexp (m, e)</code></a></h3>

<p>  
Returns <em>m2<sup>e</sup></em> (<code>e</code> should be an integer).

<p>  
<hr><h3><a name="pdf-math.log"><code>math.log (x [, base])</code></a></h3>

<p>  
Returns the logarithm of <code>x</code> in the given base.  
The default for <code>base</code> is <em>e</em>  
(so that the function returns the natural logarithm of <code>x</code> code>).

<p>  
<hr><h3><a name="pdf-math.max"><code>math.max (x,  
&middot;&middot;&middot;)</code></a></h3>

<p>  
Returns the maximum value among its arguments.

<p>  
<hr><h3><a name="pdf-math.min"><code>math.min (x,  
&middot;&middot;&middot;)</code></a></h3>

<p>  
Returns the minimum value among its arguments.

<p>  
<hr><h3><a name="pdf-math.modf"><code>math.modf (x)</code></a></h3>

<p>  
Returns two numbers,  
the integral part of <code>x</code> and the fractional part of  
<code>x</code>.

<p>  
<hr><h3><a name="pdf-math.pi"><code>math.pi</code></a></h3>

<p>  
The value of <em>&pi;</em>.

<p>  
<hr><h3><a name="pdf-math.pow"><code>math.pow (x, y)</code></a></h3>

<p>  
Returns <em>x<sup>y</sup></em>.  
(You can also use the expression <code>x^y</code> to compute this  
value.)

<p>  
<hr><h3><a name="pdf-math.rad"><code>math.rad (x)</code></a></h3>

<p>

Returns the angle `x` (given in degrees) in radians.

<p>

<hr><h3><a name="pdf-math.random"><code>math.random ([m [, n]])</code></a></h3>

<p>

This function is an interface to the simple pseudo-random generator function `rand` provided by Standard C.  
(No guarantees can be given for its statistical properties.)

<p>

When called without arguments,  
returns a uniform pseudo-random real number  
in the range  $[0,1)$ .  
When called with an integer number `m`,  
`math.random` returns  
a uniform pseudo-random integer in the range  $[1, m]$ .  
When called with two integer numbers `m` and `n`,  
`math.random` returns a uniform pseudo-random  
integer in the range  $[m, n]$ .

<p>

<hr><h3><a name="pdf-math.randomseed"><code>math.randomseed (x)</code></a></h3>

<p>

Sets `x` as the "seed"  
for the pseudo-random generator:  
equal seeds produce equal sequences of numbers.

<p>

<hr><h3><a name="pdf-math.sin"><code>math.sin (x)</code></a></h3>

<p>

Returns the sine of `x` (assumed to be in radians).

<p>

<hr><h3><a name="pdf-math.sinh"><code>math.sinh (x)</code></a></h3>

<p>

Returns the hyperbolic sine of `x`.

<p>

<hr><h3><a name="pdf-math.sqrt"><code>math.sqrt (x)</code></a></h3>

<p>

Returns the square root of `x`.

(You can also use the expression `x^0.5` to compute this value.)

<p>

<hr><h3><a name="pdf-math.tan"><code>math.tan (x)</code></a></h3>

<p>

Returns the tangent of `x` (assumed to be in radians).

<p>

<hr><h3><a name="pdf-math.tanh"><code>math.tanh (x)</code></a></h3>

<p>

Returns the hyperbolic tangent of `x`.

## 6.7 &ndash; [6.7](#) Bitwise Operations

This library provides bitwise operations.  
It provides all its functions inside the table [pdf-bit32](#)`bit32`.

Unless otherwise stated,  
all functions accept numeric arguments in the range  $[-2^{51}, +2^{51}]$ ;  
each argument is normalized to  
the remainder of its division by  $2^{32}$   
and truncated to an integer (in some unspecified way),  
so that its final value falls in the range  $[0, 2^{32} - 1]$ .  
Similarly, all results are in the range  $[0, 2^{32} - 1]$ .  
Note that `bit32.bnot(0)` is `0xFFFFFFFF`,  
which is different from `-1`.

---

### [pdf-bit32.arshift](#)`bit32.arshift (x, disp)`

Returns the number `x` shifted `disp` bits to  
the right.  
The number `disp` may be any representable integer.  
Negative displacements shift to the left.

This shift operation is what is called arithmetic shift.  
Vacant bits on the left are filled  
with copies of the higher bit of `x`;  
vacant bits on the right are filled with zeros.  
In particular,  
displacements with absolute values higher than 31  
result in zero or `0xFFFFFFFF` (all original bits are  
shifted out).

---

### [pdf-bit32.band](#)`bit32.band` (`&...&...&...`)

Returns the bitwise *and* of its operands.

---

### [pdf-bit32.bnot](#)`bit32.bnot (x)`

Returns the bitwise negation of `x`.  
For any integer `x`,  
the following identity holds:

```
assert(bit32.bnot(x) == (-1 - x) % 2^32)
```

---

### [pdf-bit32.bor](#)`bit32.bor` (`&...&...&...`)

Returns the bitwise *or* of its operands.

---

### [pdf-bit32.btest](#)`bit32.btest` (`&...&...&...`)

Returns a boolean signaling  
whether the bitwise *and* of its operands is different from  
zero.

<hr><h3><a name="pdf-bit32.bxor"><code>bit32.bxor  
(&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Returns the bitwise <em>exclusive or</em> of its operands.

<p>  
<hr><h3><a name="pdf-bit32.extract"><code>bit32.extract (n, field [,  
width])</code></a></h3>

<p>  
Returns the unsigned number formed by the bits  
<code>field</code> to <code>field + width - 1</code> from <code>n</code>  
<code>.</code>  
Bits are numbered from 0 (least significant) to 31 (most significant).  
All accessed bits must be in the range <em>[0, 31]</em>.

<p>  
The default for <code>width</code> is 1.

<p>  
<hr><h3><a name="pdf-bit32.replace"><code>bit32.replace (n, v, field  
[, width])</code></a></h3>

<p>  
Returns a copy of <code>n</code> with  
the bits <code>field</code> to <code>field + width - 1</code>  
replaced by the value <code>v</code>.  
See <a href="#pdf-bit32.extract"><code>bit32.extract</code></a> for  
details about <code>field</code> and <code>width</code>.

<p>  
<hr><h3><a name="pdf-bit32.lrotate"><code>bit32.lrotate (x, disp)</code></a></h3>

<p>

Returns the number `x` rotated `disp` bits to the left.

The number `disp` may be any representable integer.

<p>

For any valid displacement,  
the following identity holds:

<pre>

```
 assert(bit32.lrotate(x, disp) == bit32.lrotate(x, disp % 32))
```

</pre><p>

In particular,  
negative displacements rotate to the right.

<p>

<hr><h3><a name="pdf-bit32.lshift"><code>bit32.lshift (x, disp)</code></a></h3>

<p>

Returns the number `x` shifted `disp` bits to the left.

The number `disp` may be any representable integer.

Negative displacements shift to the right.

In any direction, vacant bits are filled with zeros.

In particular,

displacements with absolute values higher than 31  
result in zero (all bits are shifted out).

<p>

For positive displacements,  
the following equality holds:

<pre>

```
 assert(bit32.lshift(b, disp) == (b * 2^disp) % 2^32)
```

</pre>

<p>

<hr><h3><a name="pdf-bit32.rrotate"><code>bit32.rrotate (x, disp)</code></a></h3>

<p>

Returns the number `x` rotated `disp` bits to the right.  
The number `disp` may be any representable integer.

<p>  
For any valid displacement,  
the following identity holds:

```
<pre>
 assert(bit32.rrotate(x, disp) == bit32.rrotate(x, disp % 32))
</pre><p>
```

In particular,  
negative displacements rotate to the left.

<p>  
<hr><h3><a name="pdf-bit32.rshift"><code>bit32.rshift (x, disp)</code></a></h3>

<p>  
Returns the number `x` shifted `disp` bits to the right.  
The number `disp` may be any representable integer.  
Negative displacements shift to the left.  
In any direction, vacant bits are filled with zeros.  
In particular,  
displacements with absolute values higher than 31  
result in zero (all bits are shifted out).

<p>  
For positive displacements,  
the following equality holds:

```
<pre>
 assert(bit32.rshift(b, disp) == math.floor(b % 2^32 / 2^disp))
</pre>
```

<p>  
This shift operation is what is called logical shift.

## 6.8 – [Input and Output Facilities](#)

The I/O library provides two different styles for file manipulation. The first one uses implicit file descriptors; that is, there are operations to set a default input file and a default output file, and all input/output operations are over these default files. The second style uses explicit file descriptors.

When using implicit file descriptors, all operations are supplied by table [io](#). When using explicit file descriptors, the operation [io.open](#) returns a file descriptor and then all operations are supplied as methods of the file descriptor.

The table `io` also provides three predefined file descriptors with their usual meanings from C: [io.stdin](#), [io.stdout](#), and [io.stderr](#). The I/O library never closes these files.

Unless otherwise stated, all I/O functions return `nil` on failure (plus an error message as a second result and a system-dependent error code as a third result) and some value different from `nil` on success. On non-Posix systems, the computation of the error message and error code in case of errors may be not thread safe, because they rely on the global C variable `errno`.

---

### [io.close \(\[file\]\)](#)

Equivalent to `file:close()`.  
Without a `file`, closes the default output file.

<p>  
<hr><h3><a name="pdf-io.flush"><code>io.flush ()</code></a></h3>

<p>  
Equivalent to `io.output():flush()`.

<p>  
<hr><h3><a name="pdf-io.input"><code>io.input ([file])</code></a></h3>

<p>  
When called with a file name, it opens the named file (in text mode),  
and sets its handle as the default input file.  
When called with a file handle,  
it simply sets this file handle as the default input file.  
When called without parameters,  
it returns the current default input file.

<p>  
In case of errors this function raises the error,  
instead of returning an error code.

<p>  
<hr><h3><a name="pdf-io.lines"><code>io.lines ([filename  
&middledot;&middledot;&middledot;])</code></a></h3>

<p>  
Opens the given file name in read mode  
and returns an iterator function that  
works like `file:lines(&middledot;&middledot;&middledot;)` over the  
opened file.  
When the iterator function detects the end of file,  
it returns **nil** (to finish the loop) and automatically closes  
the file.

<p>

The call `io.lines()` (with no file name) is equivalent to `io.input():lines()`; that is, it iterates over the lines of the default input file. In this case it does not close the file when the loop ends.

<p>

In case of errors this function raises the error, instead of returning an error code.

<p>

---

### <a name="pdf-io.open"><code>io.open (filename [, mode])</code></a></h3>

<p>

This function opens a file, in the mode specified in the string `mode`. It returns a new file handle, or, in case of errors, **`nil`** plus an error message.

<p>

The `mode` string can be any of the following:

<ul>

- <li><b>"<code>r</code>": </b> read mode (the default);</li>
- <li><b>"<code>w</code>": </b> write mode;</li>
- <li><b>"<code>a</code>": </b> append mode;</li>
- <li><b>"<code>r+</code>": </b> update mode, all previous data is preserved;</li>
- <li><b>"<code>w+</code>": </b> update mode, all previous data is erased;</li>
- <li><b>"<code>a+</code>": </b> append update mode, previous data is preserved, writing is only allowed at the end of file.</li>

</ul><p>

The `mode` string can also have a '`b`' at the end, which is needed in some systems to open the file in binary mode.

<p>

<hr><h3><a name="pdf-io.output"><code>io.output ([file])</code></a></h3>

<p>  
Similar to <a href="#pdf-io.input"><code>io.input</code></a>, but operates over the default output file.

<p>  
<hr><h3><a name="pdf-io.popen"><code>io.popen (prog [, mode])</code></a></h3>

<p>  
This function is system dependent and is not available on all platforms.

<p>  
Starts program <code>prog</code> in a separated process and returns a file handle that you can use to read data from this program (if <code>mode</code> is <code>"r"</code>, the default) or to write data to this program (if <code>mode</code> is <code>"w"</code>).

<p>  
<hr><h3><a name="pdf-io.read"><code>io.read (&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Equivalent to <code>io.input():read(&middledot;&middledot;&middledot;)</code>.

<p>  
<hr><h3><a name="pdf-io.tmpfile"><code>io.tmpfile ()</code></a></h3>

<p>  
Returns a handle for a temporary file.  
This file is opened in update mode  
and it is automatically removed when the program ends.

<p>  
<hr><h3><a name="pdf-io.type"><code>io.type (obj)</code></a></h3>

<p>  
Checks whether <code>obj</code> is a valid file handle.  
Returns the string <code>"file"</code> if <code>obj</code> is an open  
file handle,  
<code>"closed file"</code> if <code>obj</code> is a closed file  
handle,  
or <b>nil</b> if <code>obj</code> is not a file handle.

<p>  
<hr><h3><a name="pdf-io.write"><code>io.write  
(&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Equivalent to <code>io.output():write(&middledot;&middledot;&middledot;)</code>  
<code>.</code>

<p>  
<hr><h3><a name="pdf-file:close"><code>file:close ()</code></a></h3>

<p>  
Closes <code>file</code>.  
Note that files are automatically closed when  
their handles are garbage collected,  
but that takes an unpredictable amount of time to happen.

<p>  
When closing a file handle created with <a href="#pdf-io.popen"><code>io.popen</code></a>,  
<a href="#pdf-file:close"><code>file:close</code></a> returns the same  
values  
returned by <a href="#pdf-os.execute"><code>os.execute</code></a>.

<p>  
<hr><h3><a name="pdf-file:flush"><code>file:flush ()</code></a></h3>

<p>  
Saves any written data to <code>file</code>.

<p>  
<hr><h3><a name="pdf-file:lines"><code>file:lines  
(&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Returns an iterator function that,  
each time it is called,  
reads the file according to the given formats.  
When no format is given,  
uses "&ast;l" as a default.  
As an example, the construction

<pre>  
 for c in file:lines(1) do <em>body</em> end  
</pre><p>  
will iterate over all characters of the file,  
starting at the current position.  
Unlike <a href="#pdf-io.lines"><code>io.lines</code></a>, this  
function does not close the file  
when the loop ends.

<p>  
In case of errors this function raises the error,  
instead of returning an error code.

<p>  
<hr><h3><a name="pdf-file:read"><code>file:read  
(&middledot;&middledot;&middledot;)</code></a></h3>

<p>  
Reads the file <code>file</code>,  
according to the given formats, which specify what to read.

For each format,  
the function returns a string (or a number) with the characters read,  
or `<b>nil</b>` if it cannot read data with the specified format.  
When called without formats,  
it uses a default format that reads the next line  
(see below).

`<p>`

The available formats are

`<ul>`

`<li><b>"<code>*n</code>": </b>`  
reads a number;  
this is the only format that returns a number instead of a string.  
`</li>`

`<li><b>"<code>*a</code>": </b>`  
reads the whole file, starting at the current position.  
On end of file, it returns the empty string.  
`</li>`

`<li><b>"<code>*l</code>": </b>`  
reads the next line skipping the end of line,  
returning `<b>nil</b>` on end of file.  
This is the default format.  
`</li>`

`<li><b>"<code>*L</code>": </b>`  
reads the next line keeping the end of line (if present),  
returning `<b>nil</b>` on end of file.  
`</li>`

`<li><b><em>number</em>: </b>`  
reads a string with up to this number of bytes,  
returning `<b>nil</b>` on end of file.  
If number is zero,  
it reads nothing and returns an empty string,  
or `<b>nil</b>` on end of file.  
`</li>`

`</ul>`

`<p>`

`<hr><h3><a name="pdf-file:seek"><code>file:seek ([whence [,  
offset]])</code></a></h3>`

<p>

Sets and gets the file position,  
measured from the beginning of the file,  
to the position given by `offset` plus a base  
specified by the string `whence`, as follows:

<ul>

<li><b>"`set`": </b> base is position 0 (beginning of the  
file);</li>

<li><b>"`cur`": </b> base is current position;</li>

<li><b>"`end`": </b> base is end of file;</li>

</ul><p>

In case of success, `seek` returns the final file position,  
measured in bytes from the beginning of the file.

If `seek` fails, it returns **nil**,  
plus a string describing the error.

<p>

The default value for `whence` is `"cur"`,  
and for `offset` is 0.

Therefore, the call `file:seek()` returns the current  
file position, without changing it;

the call `file:seek("set")` sets the position to the  
beginning of the file (and returns 0);

and the call `file:seek("end")` sets the position to the  
end of the file, and returns its size.

<p>

<hr><h3><a name="pdf-file:setvbuf"><code>file:setvbuf (mode [,  
size])</code></a></h3>

<p>

Sets the buffering mode for an output file.

There are three available modes:

<ul>

<li><b>"`no`": </b>

no buffering; the result of any output operation appears immediately.  
</li>

<li><b>"`full`": </b>

full buffering; output operation is performed only  
when the buffer is full or when

you explicitly `flush` the file (see [`io.flush`](#pdf-io.flush)).

**`line`:**  
line buffering; output is buffered until a newline is output or there is any input from some special files (such as a terminal device).

For the last two cases, `size` specifies the size of the buffer, in bytes. The default is an appropriate size.

---

### [file:write](#)

Writes the value of each of its arguments to `file`. The arguments must be strings or numbers.

In case of success, this function returns `file`. Otherwise it returns **`nil`** plus a string describing the error.

## 6.9 – [Operating System Facilities](#)

This library is implemented through table [`os`](#).

---

### [os.clock](#)

Returns an approximation of the amount in seconds of CPU time used by the program.

<p>  
<hr><h3><a name="pdf-os.date"><code>os.date ([format [, time]])</code></a></h3>

<p>  
Returns a string or a table containing date and time, formatted according to the given string <code>format</code>.

<p>  
If the <code>time</code> argument is present, this is the time to be formatted (see the <a href="#pdf-os.time"><code>os.time</code></a> function for a description of this value). Otherwise, <code>date</code> formats the current time.

<p>  
If <code>format</code> starts with '<code>!</code>', then the date is formatted in Coordinated Universal Time. After this optional character, if <code>format</code> is the string "<code>\*t</code>", then <code>date</code> returns a table with the following fields: <code>year</code> (four digits), <code>month</code> (1&ndash;12), <code>day</code> (1&ndash;31), <code>hour</code> (0&ndash;23), <code>min</code> (0&ndash;59), <code>sec</code> (0&ndash;61), <code>wday</code> (weekday, Sunday is&nbsp;1), <code>yday</code> (day of the year), and <code>isdst</code> (daylight saving flag, a boolean). This last field may be absent if the information is not available.

<p>  
If <code>format</code> is not "<code>\*t</code>", then <code>date</code> returns the date as a string, formatted according to the same rules as the ISO&nbsp;C function <code>strftime</code>.

<p>  
When called without arguments,

`date` returns a reasonable date and time representation that depends on the host system and on the current locale (that is, `os.date()` is equivalent to `os.date("%c")`).

On non-Posix systems, this function may be not thread safe because of its reliance on C function `gmtime` and C function `localtime`.

---

### [pdf-os.difftime](#)`os.difftime (t2, t1)`

Returns the number of seconds from time `t1` to time `t2`.  
In POSIX, Windows, and some other systems, this value is exactly `t2-t1`.

---

### [pdf-os.execute](#)`os.execute ([command])`

This function is equivalent to the ISO C function `system`.  
It passes `command` to be executed by an operating system shell.  
Its first result is **true** if the command terminated successfully, or **nil** otherwise.  
After this first result the function returns a string and a number, as follows:

- "`exit`":**

the command terminated normally;  
the following number is the exit status of the command.

**"`signal`":** **</b>**  
the command was terminated by a signal;  
the following number is the signal that terminated the command.

**</ul>**

**<p>**  
When called without a `command`,  
`os.execute` returns a boolean that is true if a shell is  
available.

**<p>**  
**<hr><h3><a name="pdf-os.exit"><code>os.exit ([code [, close]]</code></a></h3>**

**<p>**  
Calls the ISO&nbsp;C function `exit` to terminate the host  
program.  
If `code` is **true**,  
the returned status is `EXIT_SUCCESS`;  
if `code` is **false**,  
the returned status is `EXIT_FAILURE`;  
if `code` is a number,  
the returned status is this number.  
The default value for `code` is **true**.

**<p>**  
If the optional second argument `close` is true,  
closes the Lua state before exiting.

**<p>**  
**<hr><h3><a name="pdf-os.getenv"><code>os.getenv (varname)</code></a></h3>**

**<p>**  
Returns the value of the process environment variable `varname`

`>`,  
or `<b>nil</b>` if the variable is not defined.

`<p>`  
`<hr><h3><a name="pdf-os.remove"><code>os.remove (filename)</code></a></h3>`

`<p>`  
Deletes the file (or empty directory, on POSIX systems) with the given name.  
If this function fails, it returns `<b>nil</b>`, plus a string describing the error and the error code.

`<p>`  
`<hr><h3><a name="pdf-os.rename"><code>os.rename (oldname, newname)</code></a></h3>`

`<p>`  
Renames file or directory named `<code>oldname</code>` to `<code>newname</code>`.  
If this function fails, it returns `<b>nil</b>`, plus a string describing the error and the error code.

`<p>`  
`<hr><h3><a name="pdf-os.setlocale"><code>os.setlocale (locale [, category])</code></a></h3>`

`<p>`  
Sets the current locale of the program.  
`<code>locale</code>` is a system-dependent string specifying a locale;  
`<code>category</code>` is an optional string describing which category to change:  
`<code>"all"</code>`, `<code>"collate"</code>`, `<code>"ctype"</code>`, `<code>"monetary"</code>`, `<code>"numeric"</code>`, or `<code>"time"</code>`;  
the default category is `<code>"all"</code>`.  
The function returns the name of the new locale,  
or `<b>nil</b>` if the request cannot be honored.

<p>

If `locale` is the empty string,  
the current locale is set to an implementation-defined native locale.  
If `locale` is the string "`C`",  
the current locale is set to the standard C locale.

<p>

When called with `nil` as the first argument,  
this function only returns the name of the current locale  
for the given category.

<p>

This function may be not thread safe  
because of its reliance on C function `setlocale`.

<p>

---

### <a name="pdf-os.time">`os.time ([table])`</a></h3>

<p>

Returns the current time when called without arguments,  
or a time representing the date and time specified by the given table.  
This table must have fields `year`, `month`, and  
`day`,  
and may have fields  
`hour` (default is 12),  
`min` (default is 0),  
`sec` (default is 0),  
and `isdst` (default is `nil`).  
For a description of these fields, see the [<code>os.date</code>](#pdf-os.date) function.

<p>

The returned value is a number, whose meaning depends on your system.  
In POSIX, Windows, and some other systems,  
this number counts the number  
of seconds since some given start time (the "epoch").  
In other systems, the meaning is not specified,  
and the number returned by `time` can be used only as an  
argument to  
[<code>os.date</code>](#pdf-os.date) and [<code>os.difftime</code>](#pdf-os.difftime).

<p>  
<hr><h3><a name="pdf-os.tmpname"><code>os.tmpname ()</code></a></h3>

<p>  
Returns a string with a file name that can  
be used for a temporary file.  
The file must be explicitly opened before its use  
and explicitly removed when no longer needed.

<p>  
On POSIX systems,  
this function also creates a file with that name,  
to avoid security risks.  
(Someone else might create the file with wrong permissions  
in the time between getting the name and creating the file.)  
You still have to open the file to use it  
and to remove it (even if you do not use it).

<p>  
When possible,  
you may prefer to use <a href="#pdf-io.tmpfile"><code>io.tmpfile</code></a>,  
which automatically removes the file when the program ends.

## <h2>6.10 &ndash; <a name="6.10">The Debug Library</a></h2>

<p>  
This library provides  
the functionality of the debug interface (<a href="#4.9">&sect;4.9</a>) to Lua programs.  
You should exert care when using this library.  
Several of its functions  
violate basic assumptions about Lua code  
(e.g., that variables local to a function  
cannot be accessed from outside;  
that userdata metatables cannot be changed by Lua code;  
that Lua programs do not crash)

and therefore can compromise otherwise secure code.  
Moreover, some functions in this library may be slow.

<p>

All functions in this library are provided  
inside the [`debug`](#) table.  
All functions that operate over a thread  
have an optional first argument which is the  
thread to operate over.  
The default is always the current thread.

<p>

---

### [`debug.debug \(\)`](#)

<p>

Enters an interactive mode with the user,  
running each string that the user enters.  
Using simple commands and other debug facilities,  
the user can inspect global and local variables,  
change their values, evaluate expressions, and so on.  
A line containing only the word `cont` finishes this  
function,  
so that the caller continues its execution.

<p>

Note that commands for `debug.debug` are not lexically  
nested  
within any function and so have no direct access to local variables.

<p>

---

### [`debug.gethook \(\[thread\]\)`](#)

<p>

Returns the current hook settings of the thread, as three values:  
the current hook function, the current hook mask,  
and the current hook count  
(as set by the [`debug.sethook`](#pdf-debug.sethook)  
function).

<p>  
<hr><h3><a name="pdf-debug.getinfo"><code>debug.getinfo ([thread,] f  
[, what])</code></a></h3>

<p>  
Returns a table with information about a function.  
You can give the function directly  
or you can give a number as the value of <code>f</code>,  
which means the function running at level <code>f</code> of the call  
stack  
of the given thread:  
level &nbsp;&nbsp;0 is the current function (<code>getinfo</code> itself);  
level &nbsp;&nbsp;1 is the function that called <code>getinfo</code>  
(except for tail calls, which do not count on the stack);  
and so on.  
If <code>f</code> is a number larger than the number of active  
functions,  
then <code>getinfo</code> returns <b>nil</b>.

<p>  
The returned table can contain all the fields returned by <a  
href="#lua\_getinfo"><code>lua\_getinfo</code></a>,  
with the string <code>what</code> describing which fields to fill in.  
The default for <code>what</code> is to get all information available,  
except the table of valid lines.  
If present,  
the option '<code>f</code>'  
adds a field named <code>func</code> with the function itself.  
If present,  
the option '<code>L</code>'  
adds a field named <code>activelines</code> with the table of  
valid lines.

<p>  
For instance, the expression <code>debug.getinfo(1,"n").name</code>  
returns  
a table with a name for the current function,  
if a reasonable name can be found,  
and the expression <code>debug.getinfo(print)</code>  
returns a table with all available information  
about the <a href="#pdf-print"><code>print</code></a> function.

<p>

---

### [pdf-debug.getlocal](#)`debug.getlocal ([thread,] f, local)`

<p>

This function returns the name and the value of the local variable with index `local` of the function at level `f` of the stack.

This function accesses not only explicit local variables, but also parameters, temporaries, etc.

<p>

The first parameter or local variable has index 1, and so on, until the last active variable.

Negative indices refer to vararg parameters;

-1 is the first vararg parameter.

The function returns **nil** if there is no variable with the given index,

and raises an error when called with a level out of range.

(You can call [pdf-debug.getinfo](#)`debug.getinfo` to check whether the level is valid.)

<p>

Variable names starting with '`(`' (open parenthesis) represent internal variables

(loop control variables, temporaries, varargs, and C function locals).

<p>

The parameter `f` may also be a function.

In that case, `getlocal` returns only the name of function parameters.

<p>

---

### [pdf-debug.getmetatable](#)`debug.getmetatable (value)`

<p>

Returns the metatable of the given `value` or **nil** if it does not have a metatable.

<p>  
<hr><h3><a name="pdf-debug.getregistry"><code>debug.getregistry ()</code></a></h3>

<p>  
Returns the registry table (see <a href="#4.5">&sect;4.5</a>).

<p>  
<hr><h3><a name="pdf-debug.getupvalue"><code>debug.getupvalue (f, up)</code></a></h3>

<p>  
This function returns the name and the value of the upvalue with index <code>up</code> of the function <code>f</code>. The function returns <b>nil</b> if there is no upvalue with the given index.

<p>  
<hr><h3><a name="pdf-debug.getuservalue"><code>debug.getuservalue (u)</code></a></h3>

<p>  
Returns the Lua value associated to <code>u</code>. If <code>u</code> is not a userdata, returns <b>nil</b>.

<p>  
<hr><h3><a name="pdf-debug.sethook"><code>debug.sethook ([thread,] hook, mask [, count])</code></a></h3>

<p>  
Sets the given function as a hook. The string <code>mask</code> and the number <code>count</code> describe when the hook will be called. The string mask may have any combination of the following characters,

with the given meaning:

- '`c`':** the hook is called every time Lua calls a function;
- '`r`':** the hook is called every time Lua returns from a function;
- '`l`':** the hook is called every time Lua enters a new line of code.

Moreover,  
with a `count` different from zero,  
the hook is called also after every `count` instructions.

When called without arguments,  
[`debug.sethook`](#pdf-debug.sethook) turns off the hook.

When the hook is called, its first parameter is a string describing the event that has triggered its call:  
`"call"` (or `"tail call"`),  
`"return"`,  
`"line"`, and `"count"`.  
For line events,  
the hook also gets the new line number as its second parameter.  
Inside a hook,  
you can call `getinfo` with `level`;2 to get more information about  
the running function  
(`level`;0 is the `getinfo` function,  
and `level`;1 is the hook function).

---

### `debug.setlocal ([thread,] level, local, value)`

This function assigns the value `value` to the local variable  
`local` of the function at level `level` of the stack.  
The function returns `nil` if there is no local

variable with the given index,  
and raises an error when called with a `level` out of  
range.

(You can call `getinfo` to check whether the level is  
valid.)

Otherwise, it returns the name of the local variable.

<p>

See [<code>debug.getlocal</code></a> for  
more information about  
variable indices and names.](#pdf-debug.getlocal)

<p>

<hr><h3><a name="pdf-debug.setmetatable"><code>debug.setmetatable  
(value, table)</code></a></h3>

<p>

Sets the metatable for the given `value` to the given  
`table`

(which can be **nil**).

Returns `value`.

<p>

<hr><h3><a name="pdf-debug.setupvalue"><code>debug.setupvalue (f, up,  
value)</code></a></h3>

<p>

This function assigns the value `value` to the upvalue  
with index `up` of the function `f`.

The function returns **nil** if there is no upvalue  
with the given index.

Otherwise, it returns the name of the upvalue.

<p>

<hr><h3><a name="pdf-debug.setuservalue"><code>debug.setuservalue  
(udata, value)</code></a></h3>

<p>

Sets the given `value` as  
the Lua value associated to the given `udata`.  
`value` must be a table or **nil**;  
`udata` must be a full userdata.

<p>

Returns `udata`.

<p>

---

### <a name="pdf-debug.traceback">`debug.traceback ([thread,] [message [, level]])`</a></h3>

<p>

If `message` is present but is neither a string nor  
**nil**,  
this function returns `message` without further processing.  
Otherwise,  
it returns a string with a traceback of the call stack.  
An optional `message` string is appended  
at the beginning of the traceback.  
An optional `level` number tells at which level  
to start the traceback  
(default is 1, the function calling `traceback`).

<p>

---

### <a name="pdf-debug.upvalueid">`debug.upvalueid (f, n)`</a></h3>

<p>

Returns an unique identifier (as a light userdata)  
for the upvalue numbered `n`  
from the given function.

<p>

These unique identifiers allow a program to check whether different  
closures share upvalues.  
Lua closures that share an upvalue  
(that is, that access a same external local variable)  
will return identical ids for those upvalue indices.

<p>  
<hr><h3><a name="pdf-debug.upvaluejoin"><code>debug.upvaluejoin (f1,  
n1, f2, n2)</code></a></h3>

<p>  
Make the <code>n1</code>-th upvalue of the Lua closure <code>f1</code>  
refer to the <code>n2</code>-th upvalue of the Lua closure <code>f2</  
code>.

<h1>7 &ndash; <a name="7">Lua Standalone</a></h1>

<p>  
Although Lua has been designed as an extension language,  
to be embedded in a host C&nbsp;program,  
it is also frequently used as a standalone language.  
An interpreter for Lua as a standalone language,  
called simply <code>lua</code>,  
is provided with the standard distribution.  
The standalone interpreter includes  
all standard libraries, including the debug library.  
Its usage is:

<pre>  
lua [options] [script [args]]

</pre><p>  
The options are:

<ul>  
<li><b><code>-e <em>stat</em></code>: </b> executes string <em>stat</em></li>  
<li><b><code>-l <em>mod</em></code>: </b> "requires" <em>mod</em>;</li>  
<li><b><code>-i</code>: </b> enters interactive mode after running  
<em>script</em>;</li>  
<li><b><code>-v</code>: </b> prints version information;</li>  
<li><b><code>-E</code>: </b> ignores environment variables;</li>  
<li><b><code>--</code>: </b> stops handling options;</li>  
<li><b><code>--</code>: </b> executes <code>stdin</code> as a file and  
stops handling options.</li>

</ul><p>

After handling its options, `lua` runs the given `script`, passing to it the given `args` as string arguments. When called without arguments, `lua` behaves as `lua -v -i` when the standard input (`stdin`) is a terminal, and as `lua -` otherwise.

<p>

When called without option `-E`, the interpreter checks for an environment variable `pdf-LUA_INIT_5_2` (or `pdf-LUA_INIT` if it is not defined) before running any argument. If the variable content has the format `@filename`, then `lua` executes the file. Otherwise, `lua` executes the string itself.

<p>

When called with option `-E`, besides ignoring `LUA_INIT`, Lua also ignores the values of `LUA_PATH` and `LUA_CPATH`, setting the values of `package.path` and `package.cpath` with the default paths defined in `luaconf.h`.

<p>

All options are handled in order, except `-i` and `-E`.

For instance, an invocation like

<pre>

```
$ lua -e'a=1' -e 'print(a)' script.lua
```

</pre><p>

will first set `a` to 1, then print the value of `a`, and finally run the file `script.lua` with no arguments. (Here `$` is the shell prompt. Your prompt may be different.)

<p>

Before starting to run the script,  
<code>lua</code> collects all arguments in the command line  
in a global table called <code>arg</code>.

The script name is stored at index 0,  
the first argument after the script name goes to index 1,  
and so on.

Any arguments before the script name  
(that is, the interpreter name plus the options)  
go to negative indices.  
For instance, in the call

```
<pre>
$ lua -la b.lua t1 t2
```

```
</pre><p>
the interpreter first runs the file <code>a.lua</code>,
then creates a table
```

```
<pre>
 arg = { [-2] = "lua", [-1] = "-la",
 [0] = "b.lua",
 [1] = "t1", [2] = "t2" }
```

```
</pre><p>
and finally runs the file <code>b.lua</code>.
The script is called with <code>arg[1]</code>, <code>arg[2]</code>, ...
as arguments;
it can also access these arguments with the vararg expression
'<code>...</code>'.
```

<p>
In interactive mode,
if you write an incomplete statement,
the interpreter waits for its completion
by issuing a different prompt.

<p>
In case of unprotected errors in the script,
the interpreter reports the error to the standard error stream.
If the error object is a string,
the interpreter adds a stack traceback to it.
Otherwise, if the error object has a metamethod <code>\_\_tostring</code>,
the interpreter calls this metamethod to produce the final message.
Finally, if the error object is <b>nil</b>,
the interpreter does not report the error.

<p>

When finishing normally,  
the interpreter closes its main Lua state  
(see [<code>lua\\_close</code></a>\).  
The script can avoid this step by  
calling \[<code>os.exit</code></a> to terminate.\]\(#pdf-os.exit\)](#lua_close)

<p>  
To allow the use of Lua as a  
script interpreter in Unix systems,  
the standalone interpreter skips  
the first line of a chunk if it starts with <code>#</code>.  
Therefore, Lua scripts can be made into executable programs  
by using <code>chmod +x</code> and the&nbsp;<code>#!</code> form,  
as in

<pre>  
    #!/usr/local/bin/lua

</pre><p>  
(Of course,  
the location of the Lua interpreter may be different in your machine.  
If <code>lua</code> is in your <code>PATH</code>,  
then

<pre>  
    #!/usr/bin/env lua

</pre><p>  
is a more portable solution.)

## <h1>8 &ndash; <a name="8">Incompatibilities with the Previous Version</a></h1>

<p>  
Here we list the incompatibilities that you may find when moving a  
program  
from Lua&nbsp;5.1 to Lua&nbsp;5.2.  
You can avoid some incompatibilities by compiling Lua with  
appropriate options (see file <code>luaconf.h</code>).  
However,  
all these compatibility options will be removed in the next version of  
Lua.  
Similarly,  
all features marked as deprecated in Lua&nbsp;5.1  
have been removed in Lua&nbsp;5.2.

## <h2>8.1 &ndash; <a name="8.1">Changes in the Language</a></h2>

<ul>

<li>

The concept of *environment* changed.  
Only Lua functions have environments.  
To set the environment of a Lua function,  
use the variable `_ENV` or the function [<code>load</code>](#pdf-load).

<p>

C functions no longer have environments.  
Use an upvalue with a shared table if you need to keep  
shared state among several C functions.  
(You may use [<code>lual\\_setfuncs</code>](#luaL_setfuncs)  
to open a C library  
with all functions sharing a common upvalue.)

<p>

To manipulate the "environment" of a userdata  
(which is now called user value),  
use the new functions  
[<code>lua\\_getuservalue</code>](#lua_getuservalue) and [<code>lua\\_setuservalue</code>](#lua_setuservalue).

<li>

Lua identifiers cannot use locale-dependent letters.

<li>

Doing a step or a full collection in the garbage collector  
does not restart the collector if it has been stopped.

<li>

Weak tables with weak keys now perform like *ephemeron tables*.

<li>

The event *tail return* in debug hooks was removed.  
Instead, tail calls generate a special new event,  
*tail call*, so that the debugger can know that  
there will not be a corresponding return event.

<li>

Equality between function values has changed.  
Now, a function definition may not create a new value;

it may reuse some previous value if there is no observable difference to the new function.

## 8.2 &ndash; [Changes in the Libraries](#)

Function `module` is deprecated.  
It is easy to set up a module with regular Lua code.  
Modules are not expected to set global variables.

Functions `setfenv` and `getfenv` were removed, because of the changes in environments.

Function `math.log10` is deprecated.  
Use [pdf-math.log](#) `math.log` with 10 as its second argument, instead.

Function `loadstring` is deprecated.  
Use `load` instead; it now accepts string arguments and are exactly equivalent to `loadstring`.

Function `table.maxn` is deprecated.  
Write it in Lua if you really need it.

Function `os.execute` now returns **true** when command terminates successfully and **nil** plus error information otherwise.

Function `unpack` was moved into the table library and therefore must be called as [pdf-table.unpack](#) `table.unpack`.

</li>

<li>

Character class `%z` in patterns is deprecated,  
as now patterns may contain '`\0`' as a regular character.  
</li>

<li>

The table `package.loaders` was renamed  
`package.searchers`.  
</li>

<li>

Lua does not have bytecode verification anymore.  
So, all functions that load code  
([`load`](#pdf-load) and [`loadfile`](#pdf-loadfile))  
are potentially insecure when loading untrusted binary data.  
(Actually, those functions were already insecure because  
of flaws in the verification algorithm.)  
When in doubt,  
use the `mode` argument of those functions  
to restrict them to loading textual chunks.  
</li>

<li>

The standard paths in the official distribution may  
change between versions.  
</li>

</ul>

## 8.3 &ndash; [Changes in the API](#8.3)

<ul>

<li>

Pseudoindex `LUA_GLOBALSINDEX` was removed.  
You must get the global environment from the registry  
(see [§4.5](#4.5)).  
</li>

<li>

Pseudoindex `LUA_ENVIRONINDEX`  
and functions `lua_getfenv`/`lua_setfenv`  
were removed,  
as functions no longer have environments.  
</li>

<li>  
Function `luaL_register` is deprecated.  
Use [<code>luaL\\_setfuncs</code>](#luaL_setfuncs) so that  
your module does not create globals.  
(Modules are not expected to set global variables anymore.)  
</li>

<li>  
The `osize` argument to the allocation function  
may not be zero when creating a new block,  
that is, when `ptr` is `NULL`  
(see [<code>lua\\_Alloc</code>](#lua_Alloc)).  
Use only the test `ptr == NULL` to check whether  
the block is new.  
</li>

<li>  
Finalizers (`__gc` metamethods) for userdata are called in  
the  
reverse order that they were marked for finalization,  
not that they were created (see [&sect;2.5.1](#2.5.1)).  
(Most userdata are marked immediately after they are created.)  
Moreover,  
if the metatable does not have a `__gc` field when set,  
the finalizer will not be called,  
even if it is set later.  
</li>

<li>  
`luaL_typerror` was removed.  
Write your own version if you need it.  
</li>

<li>  
Function `lua_cpcall` is deprecated.  
You can simply push the function with  [and call it with \[.  
</li>\]\(#lua\_pcall\)](#lua_pushcfun)

<li>  
Functions `lua_equal` and `lua_lessthan` are  
deprecated.  
Use the new  [with  
appropriate options instead.  
</li>](#lua_compare)

<li>  
Function `lua_objlen` was renamed [<code>lua\\_objlen</code>](#)

[<code>lua\\_rawlen</code></a>.](#lua_rawlen)

[<code>lua\\_load</code></a> has an extra parameter, \[<code>mode</code>\]\(#lua\_load\).  
Pass \[<code>NULL</code>\]\(#lua\_load\) to simulate the old behavior.](#lua_load)

[<code>lua\\_resume</code></a> has an extra parameter, \[<code>from</code>\]\(#lua\_resume\).  
Pass \[<code>NULL</code>\]\(#lua\_resume\) or the thread doing the call.](#lua_resume)

## 9 &ndash; [The Complete Syntax of Lua](#)

Here is the complete syntax of Lua in extended BNF.  
(It does not describe operator precedences.)

```
chunk ::= block

block ::= {stat} [retstat]

stat ::= ' |
 varlist = exp' |
 functioncall |
 label |
 break |
 goto Name |
 do block end |
 while exp do block end |
 repeat block until exp |
 if exp then block {elseif exp
then block} [else block] end |
 for Name = exp
, exp [, exp] do
block end |
 for namelist in explist do
```

```

block end |
 function funcname funcbody |
 local function Name funcbody |
 local namelist [‘=’;
explist]

 retstat ::= return [explist] [‘;’;]

 label ::= ‘::’; Name ‘::’;

 funcname ::= Name [‘.’; Name] [‘:’; Name]

 varlist ::= var [‘,’; var]

 var ::= Name | prefixexp ‘[’; exp
‘]’; | prefixexp ‘.’; Name

 namelist ::= Name [‘,’; Name]

 explist ::= exp [‘,’; exp]

 exp ::= nil | false | true | Number |
String | ‘...’; | functiondef |
 prefixexp | tableconstructor | exp binop exp | unop
exp

 prefixexp ::= var | functioncall | ‘(’; exp
‘)’;

 functioncall ::= prefixexp args | prefixexp ‘:’; Name args

 args ::= ‘(’; [explist] ‘)’; | tableconstructor | String

 functiondef ::= function funcbody

 funcbody ::= ‘(’; [parlist] ‘)’; block end

 parlist ::= namelist [‘,’; ‘...’;] | ‘...’;

 tableconstructor ::= ‘{’; [fieldlist]
‘}’;

 fieldlist ::= field {fieldsep field} [fieldsep]

 field ::= ‘[’; exp ‘]’;

```

```

‘=’ exp | Name ‘=’ exp | exp

 fieldsep ::= ‘,’ | ‘;’

 binop ::= ‘+’ | ‘-’ |
‘*’ | ‘/’ | ‘^’ |
‘%’ | ‘.’ |
 ‘<’ | ‘<=’ |
‘>’ | ‘>=’ | ‘~’ |
 and | or

 unop ::= ‘-’ | not | ‘#’

```

</pre>

<p>

```

kong-plugin-acme  
<https://github.com/Kong/kong-plugin-acme>  
<https://raw.githubusercontent.com/Kong/kong-plugin-acme/master/LICENSE>

Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the

interfaces of,  
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work,

where such license applies only to those patent claims  
licensable  
by such Contributor that are necessarily infringed by their  
Contribution(s) alone or by combination of their Contribution(s)  
with the Work to which such Contribution(s) was submitted. If

You  
institute patent litigation against any entity (including a  
cross-claim or counterclaim in a lawsuit) alleging that the Work  
or a Contribution incorporated within the Work constitutes

direct  
or contributory patent infringement, then any patent licenses  
granted to You under this License for that Work shall terminate  
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the  
Work or Derivative Works thereof in any medium, with or without  
modifications, and in Source or Object form, provided that You  
meet the following conditions:

- (a) You must give any other recipients of the Work or  
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices  
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works  
that You distribute, all copyright, patent, trademark, and  
attribution notices from the Source form of the Work,  
excluding those notices that do not pertain to any part of  
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its  
distribution, then any Derivative Works that You distribute

must  
include a readable copy of the attribution notices contained  
within such NOTICE file, excluding those notices that do not  
pertain to any part of the Derivative Works, in at least one  
of the following places: within a NOTICE text file

distributed  
as part of the Derivative Works; within the Source form or  
documentation, if provided along with the Derivative Works;

or,  
within a display generated by the Derivative Works, if and  
wherever such third-party notices normally appear. The

contents  
of the NOTICE file are for informational purposes only and  
do not modify the License. You may add Your own attribution  
notices within Derivative Works that You distribute,

alongside  
or as an addendum to the NOTICE text from the Work, provided

that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

Copyright 2018 Kong Inc.

Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this

document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including

the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s)

with the Work to which such Contribution(s) was submitted. If  
You institute patent litigation against any entity (including a  
cross-claim or counterclaim in a lawsuit) alleging that the Work  
or a Contribution incorporated within the Work constitutes  
direct or contributory patent infringement, then any patent licenses  
granted to You under this License for that Work shall terminate  
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the  
Work or Derivative Works thereof in any medium, with or without  
modifications, and in Source or Object form, provided that You  
meet the following conditions:

- (a) You must give any other recipients of the Work or  
Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices  
stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works  
that You distribute, all copyright, patent, trademark, and  
attribution notices from the Source form of the Work,  
excluding those notices that do not pertain to any part of  
the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its  
distribution, then any Derivative Works that You distribute  
must include a readable copy of the attribution notices contained  
within such NOTICE file, excluding those notices that do not  
pertain to any part of the Derivative Works, in at least one  
of the following places: within a NOTICE text file  
distributed as part of the Derivative Works; within the Source form or  
documentation, if provided along with the Derivative Works;  
or,  
within a display generated by the Derivative Works, if and  
wherever such third-party notices normally appear. The  
contents of the NOTICE file are for informational purposes only and  
do not modify the License. You may add Your own attribution  
notices within Derivative Works that You distribute,  
alongside or as an addendum to the NOTICE text from the Work, provided  
that such additional attribution notices cannot be construed  
as modifying the License.

You may add Your own copyright statement to Your modifications

and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions

of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the

appropriateness of using or redistributing the Work and assume any

risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly

negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct, indirect,  
special,  
incidental, or consequential damages of any character arising as  
a

result of this License or out of the use or inability to use the  
Work (including but not limited to damages for loss of goodwill,  
work stoppage, computer failure or malfunction, or any and all  
other commercial damages or losses), even if such Contributor  
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing  
the Work or Derivative Works thereof, You may choose to offer,  
and charge a fee for, acceptance of support, warranty,  
indemnity,  
or other liability obligations and/or rights consistent with  
this  
License. However, in accepting such obligations, You may act  
only  
on Your own behalf and on Your sole responsibility, not on  
behalf  
of any other Contributor, and only if You agree to indemnify,  
defend, and hold each Contributor harmless for any liability  
incurred by, or claims asserted against, such Contributor by  
reason  
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following  
boilerplate notice, with the fields enclosed by brackets "[]"  
replaced with your own identifying information. (Don't include  
the brackets!) The text should be enclosed in the appropriate  
comment syntax for the file format. We also recommend that a  
file or class name and description of purpose be included on the  
same "printed page" as the copyright notice for easier  
identification within third-party archives.

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under

common

control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of

the

outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,

including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object

form, that is based on (or derived from) the Work and for which the

editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes

of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of,

the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions

to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner

or by an individual or Legal Entity authorized to submit on behalf of

the copyright owner. For the purposes of this definition,

"submitted"

means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate

as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,  
any Contribution intentionally submitted for inclusion in the  
Work  
by You to the Licensor shall be under the terms and conditions  
of  
this License, without any additional terms or conditions.  
Notwithstanding the above, nothing herein shall supersede or  
modify  
the terms of any separate license agreement you may have  
executed  
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the  
trade  
names, trademarks, service marks, or product names of the  
Licensor,  
except as required for reasonable and customary use in  
describing the  
origin of the Work and reproducing the content of the NOTICE  
file.

7. Disclaimer of Warranty. Unless required by applicable law or  
agreed to in writing, Licensor provides the Work (and each  
Contributor provides its Contributions) on an "AS IS" BASIS,  
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or  
implied, including, without limitation, any warranties or  
conditions  
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A  
PARTICULAR PURPOSE. You are solely responsible for determining  
the  
appropriateness of using or redistributing the Work and assume  
any  
risks associated with Your exercise of permissions under this  
License.

8. Limitation of Liability. In no event and under no legal theory,  
whether in tort (including negligence), contract, or otherwise,  
unless required by applicable law (such as deliberate and  
grossly  
negligent acts) or agreed to in writing, shall any Contributor  
be  
liable to You for damages, including any direct, indirect,  
special,  
incidental, or consequential damages of any character arising as  
a  
result of this License or out of the use or inability to use the  
Work (including but not limited to damages for loss of goodwill,  
work stoppage, computer failure or malfunction, or any and all  
other commercial damages or losses), even if such Contributor

has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

#### END OF TERMS AND CONDITIONS

#### APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. Apache License  
Version 2.0, January 2004  
<http://www.apache.org/licenses/>

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

Object "Derivative Works" shall mean any work, whether in Source or form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

Entity "Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

- (a) You must give any other recipients of the Work or Derivative Works a copy of this License; and
- (b) You must cause any modified files to carry prominent notices stating that You changed the files; and
- (c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and
- (d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the Work

by You to the Licensor shall be under the terms and conditions of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed

with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor,

except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

## TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

### 1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the

Licensors for the purpose of discussing and improving the Work,  
but  
excluding communication that is conspicuously marked or  
otherwise  
designated in writing by the copyright owner as "Not a  
Contribution."

"Contributor" shall mean Licensor and any individual or Legal  
Entity  
on behalf of whom a Contribution has been received by Licensor  
and  
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions  
of  
this License, each Contributor hereby grants to You a perpetual,  
worldwide, non-exclusive, no-charge, royalty-free, irrevocable  
copyright license to reproduce, prepare Derivative Works of,  
publicly display, publicly perform, sublicense, and distribute  
the  
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of  
this License, each Contributor hereby grants to You a perpetual,  
worldwide, non-exclusive, no-charge, royalty-free, irrevocable  
(except as stated in this section) patent license to make, have  
made,  
use, offer to sell, sell, import, and otherwise transfer the  
Work,  
where such license applies only to those patent claims  
 licensable  
by such Contributor that are necessarily infringed by their  
Contribution(s) alone or by combination of their Contribution(s)  
with the Work to which such Contribution(s) was submitted. If  
You  
institute patent litigation against any entity (including a  
cross-claim or counterclaim in a lawsuit) alleging that the Work  
or a Contribution incorporated within the Work constitutes  
direct  
or contributory patent infringement, then any patent licenses  
granted to You under this License for that Work shall terminate  
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the  
Work or Derivative Works thereof in any medium, with or without  
modifications, and in Source or Object form, provided that You  
meet the following conditions:

(a) You must give any other recipients of the Work or  
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute

must

include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file

distributed

as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works;

or,

within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The

contents

of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute,

alongside

or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and

may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies

with

the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,

any Contribution intentionally submitted for inclusion in the

Work

by You to the Licensor shall be under the terms and conditions

of

this License, without any additional terms or conditions.

Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act

only  
on Your own behalf and on Your sole responsibility, not on  
behalf  
of any other Contributor, and only if You agree to indemnify,  
defend, and hold each Contributor harmless for any liability  
incurred by, or claims asserted against, such Contributor by  
reason  
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "{}" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

<http://webserver2.tecgraf.puc-rio.br/~lhf/ftp/luainstall.html>  
<http://webserver2.tecgraf.puc-rio.br/~lhf/ftp/luainstall.html#license>

All my Lua packages are free software. They are released into the  
public domain and also under the liberal MIT license, which is the  
same as the Lua license. Choose between the two licenses to best suit

your needs. My intent is that my code should be as free as possible. There, you have my permission to use my code without asking me. If you have special license requirements, please contact me.

The terms above applies only to the code I wrote. Sometimes, I do include code written by someone else, either because I've modified the original code (rarely) or because it's part of a much larger package and it's a hassle to extract. In this case, all third-party code will be in a directory named src, together with their original license file, which may be called COPYING or README. Check that their license is acceptable to your needs. It probably will, because I try to only include certified Open Source code. See my README and their README for details.

%%%%%%%%%

spdx-license-ids

<https://github.com/shinnn/spdx-license-ids>

<https://creativecommons.org/publicdomain/zero/1.0/deed>

Statement of Purpose

The laws of most jurisdictions throughout the world automatically

confer exclusive Copyright and Related Rights (defined below) upon the creator and subsequent owner(s) (each and all, an "owner") of an original work of authorship and/or a database (each, a "Work").

Certain owners wish to permanently relinquish those rights to a Work for the purpose of contributing to a commons of creative, cultural and scientific works ("Commons") that the public can reliably and without fear of later claims of infringement build upon, modify, incorporate in other works, reuse and redistribute as freely as possible in any form whatsoever and for any purposes, including without limitation commercial purposes. These owners may contribute to the Commons to promote the ideal of a free culture and the further production of creative, cultural and scientific works, or to gain reputation or greater distribution for their Work in part through the use and efforts of others.

For these and/or other purposes and motivations, and without any expectation of additional consideration or compensation, the person associating CC0 with a Work (the "Affirmer"), to the extent that he or she is an owner of Copyright and Related Rights in the Work, voluntarily elects to apply CC0 to the Work and publicly distribute the Work under its terms, with knowledge of his or her Copyright and Related Rights in the Work and the meaning and intended legal effect of CC0 on those rights.

1. Copyright and Related Rights. A Work made available under CC0 may be protected by copyright and related or neighboring rights ("Copyright and Related Rights"). Copyright and Related Rights include, but are not limited to, the following:

the right to reproduce, adapt, distribute, perform, display, communicate, and translate a Work;  
moral rights retained by the original author(s) and/or performer(s);  
publicity and privacy rights pertaining to a person's image or likeness depicted in a Work;  
rights protecting against unfair competition in regards to a Work, subject to the limitations in paragraph 4(a), below;  
rights protecting the extraction, dissemination, use and reuse of data in a Work;  
database rights (such as those arising under Directive 96/9/EC of the European Parliament and of the Council of 11 March 1996 on the legal protection of databases, and under any national implementation thereof, including any amended or successor version of such directive); and  
other similar, equivalent or corresponding rights throughout the world based on applicable law or treaty, and any national implementations thereof.

2. Waiver. To the greatest extent permitted by, but not in contravention of, applicable law, Affirmer hereby overtly, fully, permanently, irrevocably and unconditionally waives, abandons, and

surrenders all of Affirmer's Copyright and Related Rights and associated claims and causes of action, whether now known or unknown (including existing as well as future claims and causes of action), in the Work (i) in all territories worldwide, (ii) for the maximum duration provided by applicable law or treaty (including future time extensions), (iii) in any current or future medium and for any number of copies, and (iv) for any purpose whatsoever, including without limitation commercial, advertising or promotional purposes (the "Waiver"). Affirmer makes the Waiver for the benefit of each member of the public at large and to the detriment of Affirmer's heirs and successors, fully intending that such Waiver shall not be subject to revocation, rescission, cancellation, termination, or any other legal or equitable action to disrupt the quiet enjoyment of the Work by the public as contemplated by Affirmer's express Statement of Purpose.

3. Public License Fallback. Should any part of the Waiver for any reason be judged legally invalid or ineffective under applicable law, then the Waiver shall be preserved to the maximum extent permitted taking into account Affirmer's express Statement of Purpose. In addition, to the extent the Waiver is so judged Affirmer hereby grants to each affected person a royalty-free, non transferable, non sublicensable, non exclusive, irrevocable and unconditional license to exercise Affirmer's Copyright and Related Rights in the Work (i) in all territories worldwide, (ii) for the maximum duration provided by applicable law or treaty (including future time extensions), (iii) in any current or future medium and for any number of copies, and (iv) for any purpose whatsoever, including without limitation commercial, advertising or promotional purposes (the "License"). The License shall be deemed effective as of the date CC0 was applied by Affirmer to the Work. Should any part of the License for any reason be judged legally invalid or ineffective under applicable law, such partial invalidity or ineffectiveness shall not invalidate the remainder of the License, and in such case Affirmer hereby affirms that he or she will not (i) exercise any of his or her remaining Copyright and Related Rights in the Work or (ii) assert any associated claims and causes of action with respect to the Work, in either case contrary to Affirmer's express Statement of Purpose.

#### 4. Limitations and Disclaimers.

No trademark or patent rights held by Affirmer are waived, abandoned, surrendered, licensed or otherwise affected by this document. Affirmer offers the Work as-is and makes no representations or warranties of any kind concerning the Work, express, implied, statutory or otherwise, including without limitation warranties of title, merchantability, fitness for a particular purpose, non infringement, or the absence of latent or other defects, accuracy, or the present or absence of errors, whether or not discoverable, all to the greatest extent permissible under applicable law. Affirmer disclaims responsibility for clearing rights of other persons

that may apply to the Work or any use thereof, including without limitation any person's Copyright and Related Rights in the Work. Further, Affirmer disclaims responsibility for obtaining any necessary consents, permissions or other rights required for any use of the Work.

Affirmer understands and acknowledges that Creative Commons is not a party to this document and has no duty or obligation with respect to this CC0 or use of the Work.
